Message-ID: <60tlt0$k07$1@w3eax.umd.edu>
Source record: 189510

At present, 32 college clubs have registered for this event,
run concurrently with November Sweepstakes.

OK, actually, it IS a slant on Sweepstakes. Operate sweeps,
and wipe up the other clubs in your NCAA conference.

Just like NCAA football, but on the radio, and a distinctly
non-contact sport (unless you give head-butts when you get
that elusive 79th section for the clean sweep).

This is a GREAT way to get people a taste of centesting, and
to promote college club activity.

For more information, contact

Scott:

Your basic idea is sound. However, if we are to line with
the rest of the world, especially Europe, 12 wpm would be
more like it.

Look at the CEPT regulations (I have a copy). I will use
Germany as an example. They have three license classes.
They also only have two testing elements: a written test
and a 12 wpm (60 cpm) code test which standard for Europe.

Class C: like our No Code Tech
written exam, pass rate @ 50%
full VHF/UHF priviledges
Class A: like our Tech Plus
written exam, passed @ 50%
code test, 12 wpm
full VHF/UHF priviledges
limited HF, voice and CW on
80, 40, 15, 10 and (I believe) WARC bands
Class B: like our General
written exam passed @ 75%
code test, 12 wpm

full amateur priviledges

The biggest thing is that their testing system is simpler!!!!!
Less elements and less classes. I have a plan for us that
merges the commercial and ham tests into one system with
9 elements overall (3 for ham) and four classes max. I just
have never written it down. But our system could be simplified.
And we need to look at the CEPT.

I *believe* the group you're referring to is the Amateur Radio
News Service (ARNS). They can be contacted through their
Newsletter Editor, Steve Auyer N2TKX whose e-mail address is:

N2TKXSA@dreamscape.com

ARNS publish a Newsletter chock full of useful information on,
how to produce a newsletter. Annual dues are reasonable, even
for a smallish club.

They sponsor an annual contest to choose the "best" newsletter
from those submitted. There is no special prize, just the
knowledge that yours is considered the best by a panel of your
peers.

Hope that helps ...

I guess I'm disturbed the most by how people have grown so accustomed to mediocrity in everything they buy.

If you pay $3000 to $5000 for anything like a radio, you should expect to get a service manual. After all, we are hams. But then again, maybe the Japanese are making an accurate estimate of the technical abilities of the average modern ham.

For anyone who can help, I am looking for a schematic for the Rohde and Schwartz
EK07 tube receiver, which despite using all tubes, achieved a very high third order intercept.

I spent quite a bit of time with my R4-C, experimenting with tubes and various mixer and RF amp circuits, and have not been able to boost the IMD performance, with one exception- bypassing the RF amp. In that case you get 10db higher dynamic range, but inadequate sensitivity on 20M and up. So I'm interested in seeing what Rohde and Schwartz were doing to get such high performance.
(I tried the Rohde and Schwartz web site and their posted email addresses are not valid)

Lastly, on tube designs- the old color TV's from the late 60's and early 70's are still, I believe, some of the most elegant circuit designs ever made. With 10-20 tubes their picture is no worse than the modern set using millions of transistors.

Rob.

I just purchased a 95 Ford Contour and am wanting to put my Kenwood TM-241 in it. The ideal place would be in the "empty" space just above the console between the stereo and the ashtray. My problem is, how in the world do I get that "compartment," for lack of a better term, out so I can put my 2m rig in there?

>who worship his code.

Another one who can't read.

The issue here (and the issue I addressed) has nothing to do with the 'merits' of the code requirement. You only wish to make it seem that way. The issue here is that of someone who doesn't like the requirement and claims that they were somehow 'screwed' out of HF privileges because they 'chose' not to meet the current requirements for obtaining those privileges. And then pisses, moans, whines and crys about it.

It's one thing to rationally discuss the merits of the requirement and the possible need for change. It's another to cry about why 'you' should not have to meet those requirements as they currently stand.

>
>Talk about the pot calling the kettle black.

One short succinct comment does not a tirade make. Carl consistently disolves his argument into personal attacks, when he has nothing better to say (which is usually). My comment, however, could only be loosely construed as a personal attack. I commented on a single statement that he made, not the man himself.

>And your post proves that it is a _poor_ lid filter,

Does it now. When and where have you heard me on the air, that you can honestly critique my operating habits ? For that matter, how many of my postings have you read ? You attempt to attribute a lot to a single posting, where my comment was driven by my opinion of hundreds of postings by Carl.

>But do you have any real reason for keeping the code higher than 5
>wpm. If you want to retain the code requirement it is up to you to
>prove that it is still a reasonable requirement.

I'm not trying to prove or disprove the need for the requirement. As I said above, my posting had absolutely nothing to do with the merits of the morse requirement. That's a whole separate issue.

>>
>>The rules require that for 'privileges' on HF, that you pass a code

>
>Why should we live with it? Who are you to demand this? Why can't
>people try to change the rules?

Sure they can, and in fact 'rational' people are trying to do that. I've seen no evidence, however, that Carl is trying to do it. All I've seen from him is pissing, moaning, whining and crying about how the requirement shouldn't apply to him.

>>
>>Amateur Radio is a hobby with endless intellectual, technical and

>>some not. If the code is keeping you from enjoying the challenge of
>>the hobby., then maybe you need to find another hobby
>
>Wht not just change the rules, or won't your god MoreAss permit you to
>change your mind..

What makes you so sure that you know my 'mind' ? I haven't, anywhere, stated my opinion on the matter of the merits of the requirement. As it happens, I have an open mind on the matter. I'm not fanatical either way. It appears, by your comments, however, that YOUR mind is already made up, based on the tone of your comments (MoreAss ?), so a rational discussion on the merits doesn't seem possible here.

>Gotta agree with you one this one; it's the telegrapher's
>code and abbreviations (Q-signals, etc.) that make it international.

Actually, IMHO, although the language of amateur QSOs is often English, any digital code, including Morse, does facilitate the communication by removing the spoken language "accent" problem. I would imagine that at least some of my code QSOs were with folks who didn't know the correct pronuciation of the English words they were using. We probably could not have had that contact on voice.

Some of the "international" aspect of any coded transmission would indeed be the removal of the pronunciation barrier. While this doesn't make it a language, it does have some facets that I would consider language-like, especially for Morse endoding that is deciphered by ear.

I met a person from Eastern Europe who had originally taught herself English out of a book. I would much rather talk to her in Morse code than try to decipher her pronunciation of English words as if they had been written in her native tongue. How would a non-French speaking English speaker pronounce "Parlez vous Francais?"

Message-ID: <3432AC90.4240@boeing.com>
Source record: 189522

I was listening to the low end of 30 meters last night (10.101) (9/30)
and someone was sending a string of AAAAA...AA and tuning back and forth
over about 5 kHz after a while, he switched to Ts. No Call for 15
minutes. There was voice nearby. Any ideas? Here are mine:

1 Somebody thinking they were into a dummy load but not (or nearby).
2 Somebody from the shared service (because of nearby voice)
3 Somebody with a grudge against the operators using the frequency and
trying to jam them.

Ralph

> full amateur priviledges

Hi everyone !

Some small corrections abt our 'Class 'A' licence:

No WARC access, 6 wpm required to pass the code test, written
exam passed @ 65 %.

CEPT is going to simplify this in 2 Classes: 1 = full priviledges,
12 wpm CW required, 2 = All above 30 Mhz, no CW.
Some rules to gain access to a ham radio licence here in Germany
are subject to change due to new law about ham-radio issued by par-
liament. The fate of 'Class A' still open, they probably will keep
current status here in DL, but class 2 (no HF) abroad, however not
decided yet.

Just thought I'd let you all know that last night when I
checked my personal e-mail after returning from a two
day business trip to the west coast I found two messages
containing threats from "Inglepuck Kirbydink" (love these
pro-coder's "aliases," don't you???) with an e-mail address
in the full headers of <hrpress@rocketmail.com>
(which account has probably, by now, been terminated with
prejudice ...)

Interestingly enough, these messages (which included a full-color
JPG picture of a stern, scowling youngish man, with arm extended,
aiming a rather large caliber handgun in the general direction
of the camera ... to the point where the bore was *quite* apparent)
were cc'd to <Mountainmen@cal.net> ... anybody know if this
is some social club or one of the militias???

Don't you just love the pro-code mentality??? I mean, REALLY?
Calling each other idiots and jerks is one thing ... death threats
are WAY across the line ...

Just thought you'd like to know ... for a variety of reasons, I'm sure ...

That is YOUR OPINION not a fact Carl. The fact that you find it a bore
and a complete waste of time doesn't mean everyone does.

> Read my words ... that is NOT what I said ... I said it was an
> unnecessary, irrelevant waste of time and should not be forced
> on those with no interest in Morse, since Morse *usage* is NOT

> are not related to Morse at all ...

Neither is Slow Scan, RTTY and all sorts of modes of communications.
Learning the ham bands is a waste of time, I have the Icom chart above
the rig to check it out. Learning all the different electronic formulas
are a waste of time as I have a number of books on the shelf to look
them up if I need them. Formulas are boring and a waste of time. Why
must I understand the theory behind beam antennas, I just want to use
dipoles? Beams are boring and a waste of time. The list goes on and on
as to what each person finds boring and a waste of time.

>

Why? It is boring and a waste of time. If I need to know it I can look
it up.

> > If not, then you have a totally inexplicable
> > -double standard.

Yea right. You must not listen to the advanced/extra bands on HF much
then.

> > and they will enjoy all that ham radio has
> > -to offer (yeah, right).

> "refugees from CB" by many others ...

Who are you to speak for no-code techs? Have you done an extensive
survey to find out if they enjoy ham radio and are satisfied with what
they have? As far as how they are viewed look at you snide remark about
the higher class coded hams. No difference there, you are as guilty of
making across the board characterizations.

Admit it Carl, code is boring to you because you are too lazy or
something to learn it. If posted one less message and spent that time on
CW you would have learned the code by now. The most common thread of
your no-code argument is it is boring and a waste of time. A very
telling opinion but not hardly a fact. I know a group of about 30 teens
that have a VHF net every week that might help you out. They are all
extras. Haven't heard one of them complain about CW. Did you count them
in your facts or would that be too boring and a waste of your time??

> possible need for change. It's another to cry about why 'you' should not have

> to meet those requirements as they currently stand.

I don't recall stating that my objection to the outdated Morse "requirement"
was "for me alone" ... yes .. I resent the fact that since I refuse to meekly
accept petty the tyranny of "hazing by high-speed Morse" has kept me from
obtaining many totally unrelated privilege, despite being demonstrably well
qualified for all of those other privilege ... however, my protest is NOT
"just
for me" ... it is for everyone else who has suffered the same fate and also for
those would suffer it in the future, without change in the regulations ... and
it
is for the very survival of ham radio and our retention of our spectrum
allocations ...

> I'm not trying to prove or disprove the need for the requirement. As I said
> above, my posting had absolutely nothing to do with the merits of the
> morse requirement. That's a whole separate issue.

Right ... first attempt to silence the opposition ... then wage the "debate"
..
that, also, is typical pro-code "strategy" ... but it ain't going to work ...

> >>The rules require that for 'privileges' on HF, that you pass a code
> >>test. All your pissing, moaning, crying, whining, and rationalizing why
> >>YOU shouldn't have to pass that test to gain the privileges isn't going
> >>to change that. LIVE WITH IT.
> >

> >people try to change the rules?
>
> Sure they can, and in fact 'rational' people are trying to do that. I've seen

> no evidence, however, that Carl is trying to do it. All I've seen from him is
> pissing, moaning, whining and crying about how the requirement shouldn't
> apply to him.

The discussion here in the newsgroup is only a portion of my activity vis a vis
the code requirement ... for the moment, however, whatever else I am doing
is *MY* business ... others have tried to bait me ... saying "Why don't you

just shut up and file a petition with the FCC?" and similar comments intended
to prompt premature action on the matter ... I am not about to fall for that
..
when the time and conditions are right, I will be participating in the
regulatory
proceedings on this matter ...

In the meantime, the discussions here will continue ... after all, that's the
primary purpose of rec.radio.amateur.policy ... but since you addressed
your post to .misc as well, I will defer to your judgment and let that
selection stand so that others see the entire thread ...

I beg your pardon???

> Let us take
> -just the last sentence:
> -
> -Are you saying we must make the testing easier than it
> -already is?

No, I've said we need to make the testing MORE RELEVANT
than it is ... I have actually said on many occasions that I
feel the theory tests are broken and need to be fixed ...

> Your observation about the modern young
> -human beings wanting it to be easy or they will drop out is
> -unfortunately all too true.

I don't believe that's what I said at all ... I believe that what
I said was more like "Younger, more computer-literate, technically
oriented folks find Morse to be a bore and a complete waste of
valuable time ..."

> Getting this back in context, you
> -are advocating ridding us of Morse tests because they
> -will be viewed as too hard and too much work.

Read my words ... that is NOT what I said ... I said it was an
unnecessary, irrelevant waste of time and should not be forced
on those with no interest in Morse, since Morse *usage* is NOT
required and the privs granted for passage of faster Morse tests
are not related to Morse at all ...

> I can
> -only assume you feel the same way about the rest of
> -the testing, eh?

Not at all ... please stop trying to place those words in
my mouth ... I have NEVER advocated what you suggest.
Quite the contrary ... I have advocated both better theory
tests and also retesting for technical currency at renewal time.

> If not, then you have a totally inexplicable
> -double standard.

Not at all ... I have only stated that an irrelevant, outdated
"requirement" should be removed, relegating Morse to
the voluntary, recreational status that it deserves ... and that
theory tests need to be made more meaningful to ensure that
those who DO get licenses are truly qualified to a reasonable
technical standard for the privs that the license grants ...

> Also, you have negative expectations,
> -period. And, it shows through very clearly that it either
> -pleases you or does not surprise you that only one in
> -three even wanted to try.

It's not a matter of pleasing me ... but it doesn't surprise me.

> Well, never mind, Carl -- we
> -now have a bunch of no-code techs we did not have
> -before, because they passed (test mustn't have been very
> -hard, right?),

I have stated that I don't believe that the Tech test is rigorous
enough to justify 1500W VHF/UHF privs ... 50W would be more
like it ...

> and they will enjoy all that ham radio has
> -to offer (yeah, right).

Wrong ... no-code techs do NOT "enjoy all that ham radio
has to offer" ... they are viewed by many as sub-ham, second
class citizens in our community and scorned and reviled as
"refugees from CB" by many others ...

> I know you did not say that,

I actually didn't say much of any of the stuff you said I said ...
you don't seem to be able to keep track of who says what
or keep to the facts without trying to put words in your
"opponent's" mouth to make it look like he said something
"bad" so that you can be "the good guy."

> Indiana.

Thanks for what I am sure was a sincere offer of help ... but no thanks.

I have no intention of bowing to the false god or Morseodism ... as far as
higher speed test is concerned, that is ... I passed the 5 wpm nearly 25
years ago ...

It is far more important ... even critcial is not an exaggeration ... that
we modernize the amateur rules, testing, and license structure to
enable ham radio to survive and grow into the 21st century ...

That is why I "whine about it" as you put it ... (anything that pro-coders
don't like to hear or don't want to face as fact is considered "whining.")

Randie:
Look into the corner reflector antenna as it provides a better fron to back ratio that anything except a dish. Expect about 10db gain from it. Antennas are reciprocal in their performance so expect the same performance whether transmitting or receiving.

16th Annual ARRL and TAPR Digital Communications Conference

1997 ARRL and TAPR Digital Communications Conference
October 10-12, 1997

Baltimore, Maryland (minutes from BWI airport)

Main Web Page -- http://www.tapr.org/dcc
Tentative Schedule -- http://www.tapr.org/tapr/html/dcc97schedule.html
Proceedings Abstracts -- http://www.tapr.org/tapr/html/cnc16.html
Local Attractions -- http://www.tapr.org/tapr/html/dcc97_attractions.html

---

The 1997 ARRL and TAPR Digital Communications Conference will be held on
October 10-12, 1997 in Baltimore, Maryland. This years conference
location
is just minutes away from the BWI Airport.

What can you expect during the 1997 ARRL and TAPR Digital Communications
Conference ?

* A full day of papers and breakouts on Saturday for the beginner to the
advanced amateur digital enthusiast.

* Three workshops
o Friday (1pm - 8pm) - APRS Symposium
o Friday (4pm - 8pm) - Seminar on RF Basics for Computer Weenies
o Sunday (8:30am - 1:30pm) - Seminar on Spread Spectrum system
Design and Theory

* The second annual Student paper session.

* A banquet with a Special Guest Speaker Yutaka Sakurai, JF1LZQ who is
Vice
President of Japan's Packet Radio User's Group (PRUG). His talk is
entitled, "Japan's PRUG: A look at its history and a view to the future".
He will discuss the history of the PRUG from its early beginnings in the

mid-80's and track its development to today. He will also discuss some of PRUG's current projects and its goals for the future.

* SIGs (Special Interest Groups) on Saturday following the banquet.

* Informal get-togethers throughout the weekend.

* TAPR Membership Meeting

Special Symposiums/Seminars

In addition to the presentation of papers on Saturday, three symposiums/seminars will be held before and after the conference. These sessions are provided to allow those with additional time and interest to make the most of the Digital Communications Conference. For those that might have interest in just a symposium or seminar, registration for the conference is not necessary to register and attend one or more of the symposiums and seminars. This allows maximum flexibility for those that might want to participate during the Digital Communications Conference, but
do not have an entire weekend to devote to the event.

A full day symposium on Friday covering APRS will be conducted by Bob Bruninga, WB4APR (father of APRS) Keith Sproul, WU2Z, Mark Sproul, KB2ICI (developers of Mac and Windows APRS), Steve Dimse, K4HG (developer of javAPRS), and other nationally known APRS leaders. Join this group for the
afternoon and evening for in depth discussions and presentations on the current and future status of APRS. This is an unique opportunity to gain insight into this fast growing digital aspect of amateur operations that combines computers, packet radio, and GPS (Global Positioning System).

Starting late Friday afternoon a half-day seminar entitled "RF Basics for Computer Weenies: Helping the RF-challenged get the most out of the new high-speed wireless toys" presented by Mike Cheponis, K3MC. The seminar will focus on such topic as basic antenna types and their characteristics,
comparison of feedlines and connector types, propagation basics (calculation of path loss, multipath effects, fresnel zones, etc), weatherproofing, lightning protection, filters, basic RF measurements, and
other issues related to maintaining radio equipment on the UHF/SHF bands. This seminar will be starting late enough in the afternoon on Friday to allow those flying on that day to attend the seminar.

On Sunday morning, Dewayne Hendricks, WA8DZP, Phil Karn, KA9Q, and Tom McDermott, N5EG, will conduct a seminar focusing on "Spread Spectrum System
Design and Theory." All three presenters are well known for their work in various areas of amateur digital communications and this 5 hour seminar should be an excellent opportunity to learn about the design and theory

of
spread spectrum systems. This seminar is a follow up to the past two seminars of PCS technology by Dewayne with a new focus on system design.

Local Co-Hosts
The 1997 ARRL and TAPR Digital Communications Conference will be co-hosted
by AMRAD (Amateur Radio Research and Development Corporation).

The Amateur Radio Research and Development Corporation (AMRAD) is a worldwide club of amateur radio and computer experimenters. The purpose of
AMRAD is to develop skills and knowledge in radio and electronic technology, advocate design of experimental equipment and techniques, promote basic and applied research, organize technical forums and symposiums, collect and disseminate technical information, and provide experimental repeaters.

Airports

* The closest airport is Balitmore/Washington International (BWI)
* For those flying internationally or located on the East coast, check flights into
o Dulles International or
o Washington National Airport
* Bus/rail service from either Dulles or Washington to BWI is available, but be sure to check on this before arriving.

Hotel Information

Conference presentations, meetings, and workshops will be held at the Holiday Inn BWI Airport. DCC special rooms rates are $89 per night. When making reservations with the hotel, be sure to indicate you are attending the ARRL and TAPR DCC conference. The hotel provides transportation to and
from BWI Airport, Amtrak/MARC rail station, and the local Baltimore Light Rail. You should contact the hotel to arrange transportation.

Holiday Inn BWI Airport (conference hotel)
890 Elkridge Landing Rd, Linthicum, MD, 21090
(410) 859-8400, Fax (410) 684-6778

3912.00N and 07641.34W

Directions to Conference

Coming from Baltimore Metro Area:
Follow MD-295 SOUTH towards BWI airport
Take W. NURSERY Rd exit
LEFT at the list at the end of the exit
RIGHT at the 3rd light, WINERSON Rd
LEFT at the 1st light, ELKRIDGE LANDING Rd
Holiday Inn BWI will be 1/2 mile on right.

Coming from Annapolis:
Follow I-97 NORTH/RT. 3 NORTH
Take DORSEY Rd Exit (rt 176 West)
RIGHT onto AVIATION Blvd (Rt 162)
Pass BWI Satellite parking
Follow signs to BWI Airport
RIGHT onto ELKRIDGE LANDING Rd
Holiday Inn BWI will be 1/2 mile on left.

Coming from Washington, DC:
Follow I-95 NORTH or MD-295 NORTH towards Baltimore
Take I-195 EAST towards BWI airport
Take EXIT 1A (Rt. 170 North)
LEFT at 2nd light, ELKRIDGE LANDING Rd
Holiday Inn BWI will be 1/2 mile on left.

Coming from the North:
Follow I-95 SOUTH or NEW JERSEY TURNPIKE SOUTH to I-95 South
Take I-95 SOUTH to I-195 EAST/AIRPORT to
Rt. 170 NORTH LINTHICUM to 2nd light,
turn left onto ELKRIDGE LANDING Rd
Holiday Inn BWI will be 1 mile on left.

Local Repeater Talk-In
Maryland FM Association WA3DZD repeater network has given premission to
use
their system for the talk-in on Saturday morning, October 11, 1997 and
for
use during the conference weekend. The frequecies are:

* 146.76 out, 146.16 in
* 224.76 out, 223.16 in
* 444.00 out, 449.00 in

The talk-in station will be using the call sign W3NSA.

Many thanks to the Maryland FM Association.

Hi Jim
May I offer a suggestion.
Rather than go to the expensive and complexity of your roof mounted
vertical, have you considered a simple, but effective, random wire
antenna.

The only, real, complexity will be building a series tuned circuit
antenna coupler. I don't have a copy of the arrl handbook, my last
issue over 10 years old, accidently got tossed out, I believe had
diagrams for simple series tuned circuits. You may have to visit an
amateur fleamarket to get a suitabe variable capacitor and coil but
random wire antennas do work.

Try to get two 80m radials (66' or so) on opposite sides of each
other. Bend them as required, but not at too acute an angle. If you
can get one on the roof and one in the attic so they oppose each
other, the antenna will work reasonably well. By oppose, I mean they
would look like this _._ where the . is the antenna.

The radial in the attic: be careful. There is very high voltage at the
far end of the radial (most distant from the vertical). You don't want
to shock anyone who goes into the attic, nor set up a "spark"
situation as a result of a short that could start a fire in the attic.

You can be very creative in laying out the radials. Bends, curves, you
name it, just don't fold it back on itself.

Both Devoldre's "Low Band DX'ing" and the ARRL Antenna Book show that
as few as two elevated radials, as long as they are "opposing",
produce a very acceptable, if not ideal, counterpoise for a 1/4 wave
elevated vertical. If you can't oppose them, pattern distortion will
result.

No matter what, don't use fewer than two elevated radials per band,
even if they have to be non-opposing. In your situtation, using more
than two, is probably not worth it. (The requirement of using 3 or 4
spaced 120 or 90 degrees respectively, is treated as a myth in the
sources noted above, and the computer models are provided to back it
up....so don't dispair.)

Good luck, 73

45. Re: CB Radio: Local Police Seizing Radios... Consumer electronic equipment at fault

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-01 00:00:00 UTC
From: "Amor Powers, CB Radio" <power@CB.Radio.net>
Message-ID: <34320B00.3B05@CB.Radio.net>
Source record: 189645
Cross-posted to: rec.radio.cb,alt.radio.scanner,rec.radio.amateur.misc

POLICE WILL SEIZE YOUR RADIOS
Recently proposed USA legislation would permit local authorities to march into your home and seize your radios. Other proposed legislation deals with restricting which frequencies we can listen to! Combined with local antenna restrictions and covenants, this legislation (if passed) will be the death knell for radio as we know it.

WHO IS AT FAULT?
Consumer electronic (stereos, TVs, VCRs, telephones) companies flood the market with audio equipment that is designed to sell cheap. This usually means that the equipment is so poorly designed that it easily picks up Radio Frequencies by mistake. So, whenever a nearby transmitter is operating (CB, Ham, HF), "Interference" occurs. The problem mainly occurs below about 60MHz, but is most severe below about 30MHz. This is due to state-of-the-art consumer IC design using silicon structures which have about a 50MHz range.

RFI IN OUR SOCIETY
This RF "Interference" causes problems which used to be resolved in a neighborly way in the old days. In modern society, people do not know their neighbors. So, the police are called to eliminate the "disturbance". Instead of recommending that the consumer electronics user fix the faulty equipment, the police attempt to solve the "crime" by taking out the "perpetrator" (Radio Operator).

FCC DOESN'T CARE... WHY SHOULD THEY?
The FCC has no testing verification program for consumer electronic equipment RF susceptability. Only emmissions (thank Goddess for little favors). This is good because they have traditionally not made rules on what frequencies can be received... If a stereo is also a "shortwave receiver"(by accident), the FCC doesn't care. And they shouldn't.

Buyer Beware!

Find an RSGB handbook of late 1960s or 1970s vintage and look for
Peter Martin G3PDM's high performance receiver.

Single conversion, preselected, no RF amp, 7360 mixer, IF at 1.6 MHz(If
I remember rightly) with lattice crystal filters distributed down the IF
strip. Mixed thermionic and semiconductor design, and a phase-locked
summing loop for the local oscillator. I reprinted his very low drift
Vackar VFO in the ARRL handbook oscillators chapter, but the rest of
this receiver is well worth tracking down. Periodically, I wonder about
looking for a few 7360's and building one.

>

I understand your point, but I think that the logic works in both
directions.
Can it not also be argued that in some ancient thermionic radios, every
stage ran
quite high power, and so had a fairly high TOI simply because the only
available devices that worked at the necessary frequencies ran at those
power levels?

Simple receivers without frequency synthesisers or counters may
suffer in the frequency precision and stability stakes, but this can be
counterracted by the operator having to keep readjusting things. A weak
receiver that suffers overload effects cannot be similarly compensated
for its failings. Quantity of devices is not a complete substitute for
all performance parameters.

The classic structure with narrow, tracking RF selectivity, and
having the prime selectivity distributed down a multi-stage IF amplifier
is much closer to being optimised for dynamic range than the now more
usual block filter and block gain approach.

The designers of all the HF radios from the "Big 3" in Japan, have all assumed that distortion in the IF and AF stages after the main IF filter is unimportant, and so we have a few generations of radios which do not produce audio as clear as the HRO, AR88, and BRT400 of yesteryear. Conversely, there is the tendency of all of us to look back and remember things as being somewhat better than they really were, besides, things have also got a lot more congested than in the '60s.

Find the descriptions (by Pat Hawker, G3VA) of the work done by Colin Horrabin on high dynamic range receiver building blocks. With things like these SD5000 based mixers, the performance of the 7360 can be more than threatened. Medium power RF transistors in feedback configurations offer marvellously linear gain. The current limitation is the non-linearity of the actual quartz in crystal filters. None of these things are particularly recent. Rafuse's paper in the mid 1960s showed the use of DMOS devices in switching mixers, David Norton's patents on transformer feedback amplifiers have been around for some time. Peter Martin's receiver design was shockingly revolutionary at the time it appeared, but despite being overlooked by just about everyone (including me), it has sat there on many people's bookshelves, silently pointing the way to the architecture of very high performance receivers for the last 25+ years. I'm ashamed of how long it took me to realise what I'd overlooked.

Anyone with a kitchen table and a spirit of adventure can build a receiver that cannot be matched by anything they could buy, ancient or modern.

Cheers
David GM4ZNX

..
>Or just one, single, common language, which we've already got.

I've had similar RTTY QSOs. In fact, the content of some of those QSOs is indistinguishable from that of a CW QSO (except for a line or so of RYs!). So if there is a common language, it's Q signals and word abbreviations (e.g., WX HR CLDY), not Morse.

Morse is a means of encoding the alphabetic symbols and a few other selected symbols. Any other means of encoding those symbols can be used to exchange exactly the same information. Notable examples of other such techniques include ITA2 (Baudot) and ASCII.

This is purely from memory of the review as I have never owned one, but
I believe the FT102 had a 7360 double balanced mixer.

Quicker ...

Type "yagi design" into alta vista..
There are about 5 pages out there that show you how to build yagis.
The Antenna Elmer page has a nice little 3-element you can make out of
1/4 inch conduit

Gotta agree with you one this one; it's the telegrapher's
code and abbreviations (Q-signals, etc.) that make it international.

Submitted for your approval:

EVERYONE obtains HF access at 5 wpm.

Full access to HF with successful completion of progressively
more difficult WRITTEN exams is granted.

Don't want to go further? Fine. You proved
you could do 5 wpm, the same way we proved that
we at one point knew how SSTV worked.

Full HF access available with 5wpm - something
most of us can live with.

There is a great antenna book called "Practical Antenna Handbook" by Joseph J. Carr. It has a section on radials in the roof. Nice section on theory.

>Jim VE7JLS

Hi Jim,
The radials need to tie to the antenna at its RF Ground point. In
other words, some of the radials almost have to be spread out across
the roof, preferably at about a 45 degree angle towards the ground.
Ideally, they should be evenly distributed in the horizontal plane,
but any time one of the radials has to make a bend or a turn to avoid
an obstruction, do it. However, the prescribed length(s) should be
adhered to in order to make them effective.

P.S. You're going to get an awful lot of interesting advice on this
one.

Carl,
It's one thing to be disgruntled and possibly jealous, but it's another thing to spend your life whining about it. Do you really have any excuse for not being able to get past the code other than your poor attitude? If it's simply a matter of getting some one to practice with you on the air, I can do that. Maybe I could pay back the retired telegrapher who helped me and my friends when we were kids back in Indiana.

This entire thing over "code" is stupid to say the least.....no one cares in america what language anyone uses in public or anywhere else......then why worry how people communicate over the airwaves.....Its old die hards that fall to understand that radio has more to it than " a very slow 20 words per minute " K2IJY....also If the persons involved in threats do a few months in jail, they will have time to get there code speed up a bit.....

Dear Ulrich,

I had a similar problem some 20 years ago when using 40 metre band.

It was due to my SSB being picked up on his down lead plus a long extension speaker cable. It occurred ONLY when the neighbour's TV set was switched off at the mains socket.

The RF currents flowing in the speaker lead were being demodulated by the audio output transistors which were acting as rectifier diodes. The very distorted SSB speech came from the speakers.

The problem was cured by putting a coax choke in down lead. But the GPO Interference Inspector still closed my station down for 4 weeks to give my neighbour time to get it fixed.
We were friends. I obtained and filled in the compaint form for him. Hope the same thing doesn't happen to you.

Regards, Reg Edwards

Hello Carl,
I sincerely appreciate your response and your opinion. I still don't
understand the problem, but I will go back over the issues and see if
I can identify with your side of it. I really hope as you do that
amateur radio will continue and will flourish and become an even
better hobby that it is today.

I guess the first mistake that I made was in assuming that you were
simply unhappy with not being able to do CW. I see now that I was
wrong, and that leads to the possiblilty that I'm wrong about other
aspects of it as well.

Continue on OM and I will keep on reading and learning.

Thanks,

Diddo. The same problem happened to me and the solution of dissolving
the glue worked.

Heck, Carl, it could be said to fit fanatics of all sorts. However, I don't think the acronym will be at all helpful. At worst, it will alienate some of those who might be trying to decide the issues. At best, it will lead some to question the credibility and sincerity of those who are offering it as part of the discussion. In either event, it is certainly insultive, both the the intended victim and possibly to others.

I must admit, though, that a good insult does occasionally help some of those who offer the insults feel better ... I have been known to do it on the freeway -- a circumstance under which I neither expect or care about the results.

N1PGW Harry A Webber

Does anyone know how to reach Harry Webber N1PGW?

I have my cashed check for $375 (cashed 08-04-97)
and the UPS Strike etc has confused matters, but I
was last promised a tracking number several weeks
ago. No package or tracking numbers received.

I need to get in touch with Harry to determine what
has happened as this really dragging out...

We made our deal for the FT-101zd and SP-901 speaker
back on July 28, 1997. That was a long time ago!

Any help greatly appreciated.

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Status
Production release

Updated
01 Apr 97

System requirements
Works on many Unix-like systems, including Linux. On linux it
works with or without X11 or a Soundcard.

Detail
bip offers a very wide range of options that make it very
suitable as a code practice program. It can send text from text
file or random character groups but it has a range of other
features. Some of these are
```

- Morse compliant with ARRL specification
- adjustable volume and tone
- adjustable speed, including Farenheit method
- Jitter feature to simulate hand sent morse

```
Where and How to obtain it.
Not available online, but anyone can write to
Marcin.Skubiszewski@inria.fr for a copy of the source code.

Licensing/Copyright
Shareware $10.

Contributed by
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr.

6.3. cw2hex
```

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
cw2hex converts ascii text into Hex files for making keyer
EPROMS.
Status
version 1.1 is tested and ready to go.

Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
This program takes a textual input and converts it to morse
encoded characters in the form of a standard Intel HEX file. The
Hex file can be used to program an EPROM which can then be
connected to a simple circuit that generates canned messages.
Possible uses are CW calling machines and CW beacon transmitter
keyers. There is an accompanying schematic for a keyer circuit
that works with this software.

Where and How to obtain it.
You can obtain cw2hex from www.atd.ucar.edu
<http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

Contributed by:
G. Forrest Cook, WB0RIO

6.4. SoundCard CW

Author
Steve Merrifield, VK3ESM, sjm@ee.latrobe.edu.au

Description
Morse Code practice for Linux, using a soundcard

Status
Completed

Updated
01 Apr 97

System requirements
Linux supported soundcard with FM support.

Detail
This program generates morse code characters using the
soundcard. It does not rely on the Linux virtual console sound
features and may therefore be used either with X11 or from a
virtual console. Its features include:

- adjustable frequency
- adjustable volume
- adjustable speed
- adjustable delay
- adjustable group count
- generation of random groups
- able to decode and play text files

Where and How to obtain it.
The software may be obtained from its home site at:
livewire.ee.latrobe.edu.au
<http://livewire.ee.latrobe.edu.au/~sjm/morse>.

Copyright/Licensing
Berkeley style copyright. The software may be freely used so
long as credit is given to the original author.

Contributed by:
Steve Merrifield, VK3ESM

6.5. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, alan@lxorguk.ukuu.org.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

Updated
01 Apr 97

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat,
and allows you to play morse at a range of speeds and
frequencies through the PC internal speaker. You can specify the
text to be played either from the command line, from a file, or
the program is capable of generating random character groups. As
it stands you must invoke the program from a Linux Virtual
Console, as it relies on certain kernel calls to produce the
sound, and these don't work as easily from an XTerm. As it
sounds each character it lists the character in verbal form (Di,
Dit, Dah etc.) to the screen. Alan is hoping that someone will
take the code and enhance it with the features he has listed in
the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.z>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.6. morse (aka superiormorse)

Author
Joe Dellinger, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.
Status
Quite stable

Updated
01 Apr 97

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse.tar.gz can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. oscope - Enhanced Software Oscillosope

Author
Tim Witham, twitham@pcocd2.intel.com

Description
`oscope' is a digital 44kHz oscilloscope for /dev/dsp. It is based on Jeff Tranter's original work described below but has been significantly enhanced.

Status
First production release.
Updated
01 Apr 97

System requirements
Requires a kernel supported sound card that can do 8800Hz - 44kHz, the `libsx' package to build the xoscope X11 client, the `svgalib' package to build console-based oscope, the `g3vga' package to add console text, and a mixing program to select input source and level.

Detail
Includes oscope for SVGA console display and xoscope, an X11 client. Features include 8-bit sampling of 2 channels at 44kHz, 5 us/div to 5 ms/div time scale, 5 automatic measurements, built-in and external math functions including sum, diff, avg, and FFT, 26 memory buffers, 8 simultaneous signal displays, and file save/load.

Where and How to obtain it.
The oscope package may be obtained from either www.bobsplace.com <http://www.bobsplace.com/~twitham/> or sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

Contributed by:
Tim Witham

11.2. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

Updated
01 Apr 97

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope in the scope package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.3. Printed Circuit Board design tool.

Author
Thomas Nau, Thomas.Nau@rz.uni-ulm.de

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.4.1, stable.

Updated
01 Apr 97

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: ftp.uni-ulm.de <ftp://ftp.uni-ulm.de/pub/pcb/current> or from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License

11.4. Chipmunk circuit design and simulation tool

Author
Dave Gillespie daveg@synaptics.com and John Lazzaro
lazzaro@cs.berkeley.edu

Description
Schematic Entry and Digital or Analog Simulation tool suite.

Status
vers 5.10, stable.

Updated
01 Apr 97

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet. It is a suite of tools for circuit design and simulation.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.

11.5. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

Updated
01 Apr 97

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two simulation modes, either switch where each transistor is modelled as a voltage controlled switch, or linear where each transistor is modelled as a resistor in series with a voltage controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain the irsim package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
Freely Redistributable

11.6. Spice vers. 3f4

Author
University of California, Berkeley, port by
Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

Updated
01 Apr 97

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer
modelled environment to see how they will behave without having
to touch a soldering iron, or solder. A readme file comes with
the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of the spice package from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely
redistributable provided you are not unfriendly to the U.S.

11.7. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

Updated
01 Apr 97

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks. Andrew is working on an X-Motif version to be released soon.

Where and How to obtain it:
You can find the svgafft package at tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/> and sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/>.

Licensing/Copyright
GNU Public License.

Andrew Veliath

11.8. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

Updated
01 Apr 97

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio, performs a fast fourier transform on the data and displays the output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/> or by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.9. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development and implementation of Digital Signal Processing. It allows you to design your DSP network, runs simulations with oscilloscope style plots and listings at any point in the network.

Status
Alpha version 0.2.

Updated
01 Apr 97

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of total memory (real+swap) recommended, 6Mb of disk space for minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is a binary only package for Linux which I recommend you start with. There is comprehensive documentation included from which you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi <ftp://ftp.funet.fi/pub/Linux/util/electronics/opd>. There are a number of files that comprise the package, some of the quite large so be prepared.

Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

11.10. bpf - bandpass filter calculator

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
bpf assists in the design of two pole bandpass filters.

Status
Stable.
Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
bpf is a simple text interface program that offers you a menu of

options of different ways of inputting design data. After you've entered the data it presents a text based circuit diagram and a list of the appropriate component values. It sounds simple, and it is, but it's also quite cute, and bound to be useful.

Where and How to obtain it.
You can obtain bpf.tar.Z from www.atd.ucar.edu <http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse Code tutorials, technical examination database, Computer Based Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. twclock - World Time Clock for Hams

Author
Ted Williams, ted@bluestone.com

Description
A world clock designed for ham radio operators

Status
Version 1.0, stable.

Updated
01 Apr 97

System requirements
Motif libraries if you want to recompile it. Just X11 if you want to run the precompiled binaries.

Detail
Anyone who needs the time of day someplace else in the world, or anyone tired of the same old look of their clock will find this software of interest. It is implemented with Motif widgets, and will displays the current time in major cities around the world.

Where and How to obtain it.
You can obtain the twclock package from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright
GNU GPL

13.2. Chirp - Contest Logger

Author
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

Description
Contest logging program

Status
Active development

Updated
01 Apr 97

System requirements
Requires ncurses library and header files to compile.

Detail
A linux based contest logging program. Kenneth is writing it so
he can use it on his laptop while working VHF contests. He is
also writing it as an excuse to learn ncurses programming. His
goal is a general purpose contest logger that a user can specify
new contests in as they come about. It supports all bands and
modes.

Where and How to obtain it.
When version 1.0 is available, you should be able to find it
from the Chirp Home Page
<http://www.cs.utexas.edu/users/kharker/chirp/>

Licensing/Copyright
Probably GNU GPL.

Contributed by
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

13.3. Contest - Contest Logging Program

Author
Carsten Wilderotter, carsten.wilderotter@student.uni-ulm.de

Description
A logfile program for Contest operation

Status
Version 0.0.1, Alpha

Updated
01 Apr 97

System requirements
No special requirements.

Detail
Linux contest logging program.

Where and How to obtain it.
You can obtain the contest package from: sunsite.unc.edu

<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

13.4. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for Amateur Radio operators.

Status
Not yet available.

Updated
01 Apr 97

System requirements.
Linux compatible hardware, some software will obviously require specialised hardware to operate. No additional software should be required.

Detail
A complete Linux distribution specifically catering for Amateur Radio operators. It will include a fully featured Linux installationplus a range of amateur radio specific software such as those listed in this document. Bruce has detail and updated status report available at the LinuxForHams WWW page <http://www.rahul.net/perens/LinuxForHams>. Bruce has been extremely busy with the Debian project and this has reduced his available time to just about zero. He does still intend to pursue this. Why don't you help out by maintaining one of the software packages as Debian packages ? More information from the Debian Web Site <http://www.debian.org/>.

Where and how to obtain it:
It isn't yet available, details will be made available when it is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens

13.5. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are

exposed by sunlight and what parts aren't.

Status
Released.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.6. Xearth

Author
Kirk Johnson, tuna@cag.lcs.mit.edu

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture

of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like mercator projection. You have a number of options in determining the behaviour of the view. The details are available from the xearth Home Page
<ttp://www.cs.colorado.edu/~tuna/xearth/index.html> and in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu <ftp://cag.lcs.mit.edu/pub/tuna> or just about any X11/contrib directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The copyright notice included states that xearth is freely redistributable so long as the copyright notice is left intact, and be included in documentation.

Contributed by:
Kirk Johnson

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is

what makes this software unique, anything special about it.
Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would
be great. If it is commercial software then the name of the
company distributing the software, and an address or telephone
number. If it is available only by some other means, say mail
order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain?
Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what
you do know and I'll list what I can. I'd rather have an incomplete
listing than no listing at all.

Please mail any contributions to:

terry@perf.no.itg.telstra.com.au

I'd list a packet radio address too but I'm still not properly
operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and
Linux take place. They take place in the comp.os.linux.* newsgroups,
they also take place on the linux-hams list on vger.rutgers.edu.
Other places where they are held include the tcp-group mailing list at
ucsd.edu (the home of amateur radio tcp/ip discussions).
To join the Linux linux-hams mail list, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion
of the use of advanced protocols, of which tcp/ip is one, in Amateur
Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

The HAM-HOWTO, an introduction to Amateur Radio software available for Linux and information on how to configure some of it. Copyright (c) 1995,1996 Terry Dawson.

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v2.3, 1 April 1997

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Added entry based last updated field.
bpf - filter calculator
BayBox - Packet BBS
digiinfo - digipeater information database
Contest logging program
Chirp contest logger
bip
```

pileup
twclock
DX Cluster watcher
F6FBB BBS

Corrections/Updates:
Changed all ftp: url's to point to the directory rather than the file.
CLX, and just about everything else.
Updated location of John Gotts mirror.

ToDo:
find a way of automating this, or find an alternate means of
presenting this information.

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document
appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-
HOWTO.html>.

Dennis Boylan N4ZMZ dennis@nanovx.atl.ga.us makes it available at the
following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com
<http://www.hboc.com/linux/index.html> and www.lan.com
<http://www.lan.com/linux/index.html>.

John Gotts N8QDW jgotts@engin.umich.edu makes it available at: www-
personal.engin.umich.edu <http://www-
personal.engin.umich.edu/~jgotts/linux/HOWTO/HAM/HAM-HOWTO.html>.

Dan Todd dantodd@fusilli.ucdavis.edu makes it available at the
following two locations: wheel.dcn.davis.ca
<http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and
fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF alan@dap.CSIRO.AU makes it available in
Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at:
DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too.
I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite
communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor
G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.91 released.

Updated
01 Apr 97

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer
directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.cs.nott.ac.uk
<ftp://ftp.cs.nott.ac.uk/jsn/> or ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/> or ftp.funet.fi

<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/>. The version current at the time of writing was microsat-0.91.tar.gz. Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor, G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 4.0 is a fully commercial release. Version 3.1.5 is the last freely available release.

Updated
01 Apr 97

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the

Moon are also provided. Future releases will provide more options. SatTrack requires about 5MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

Where and How to obtain it.
The commerical version of SatTrack can be found at: SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

The free version of SatTrack may be found at: ftp.jvnc.net <ftp://ftp.jvnc.net/priv/kupiec/sattrack/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/>.

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required. Version 4.0 is a fully commercially supported release.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

Updated
01 Apr 97

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this program operates under a multiuser environment, each user on the

system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict.tgz from: amsat.org <ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is suitable), a VHF-FM receiver that can tune to 145.825 MHz, a small yagi antenna, and a communications program such as Minicom that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through a terminal program, error checks the received data, and applies calibration equations to the received data to produce a report that can be easily understood and analyzed. uo11 comes pre-compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

```
# cd /
# tar xvfz uo11.tgz
```

Where and How to obtain it.
You can obtain uo11.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

```
# cd /
# tar xvfz dove.tgz
```

Where and How to obtain it.
You can obtain dove.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

Updated
01 Apr 97

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via
the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, KG0CQ, drranu@holly.ColoState.EDU

Description
A simple program to control a Yaesu FT-890 transciever via its CAT port from linux.

Status
Working

Updated
01 Apr 97

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

- You may not charge ANYONE for the program itself.
- You may not distribute modified versions of the program.
- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, KG0CQ

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. F6FBB Packet BBS

Author
Jean-Paul Roubelat, F6FBB, jpr@f6fbb.org

Description
Fully Features Packet Radio BBS system with X11 Windows interface

Status
Version 7.00b45 is Beta.

Updated
01 Apr 97

System Requirements
Kernel based AX.25/NetRom/Rose network configuration. X11 windowing system for the X11 version.

Detail
This is a port of the well known F6FBB Packet Bulletin Board system to Linux. The BBS supports connections from AX.25, NetRom, Rose and TCP/IP and offers all of the features you'd expect from the product. The optional X11 interface provides a nicely presented sysop interface.

A mailing list for F6FBB is available. To subscribe send a mail message to: majordomo@f6fbb.org with the line `subscribe xfbb' in the body of the message. The mailing list is archived at zone.pspt.fi <http://zone.pspt.fi/archive/fbb/>.

Where and how to obtain it
You can obtain the F6FBB package from its home site at: F6FBB Home Page <http://www.f6fbb.org/>.

Licensing/Copyright etc.
The F6FBB software is frelly available for non-commercial use.

5.2. DX Cluster Watcher

Author
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

Description
Displays DX information passively received from a DX Cluster Node.

Status
Version 4, stable.

Updated
01 Apr 97

System Requirements
Requires Kernel based AX.25 configuration.

Detail
The DX Cluster watchers listens to the DX Cluster traffic on your frequency, captures it and displays it in a coloured text window. It conserves traffic on the frequency by not requiring you to actually connect to the cluster node.

Where and how to obtain it
You can obtain the DX Cluster Watcher from the: DX Cluster Watcher Home Page <http://ing49.unife.it/~iz4ako/project_inglese.html>.

Licensing/Copyright etc.
GNU GPL

Contributed by
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

5.3. Digiinfo

Author
Ported by Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

Description
A database of packet radio network information.

Status
Version 2.5.1 is stable.
Updated
01 Apr 97

System Requirements
No special requirements.

Detail
digiinfo was a program initially written for the Atari by
Karsten DC7OS. Digiinfo is a database program for displaying
information about the packet radio networks.

Where and how to obtain it
You can obtain the digiinfo package and database from its home
site at: www.vdazone.org
<http://www.vdazone.org/~dl5mlo/digiinfo/>.

Licensing/Copyright etc.
ALAS, Amateur only license

Contributed by
Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

5.4. BayBox BBS

Author
Flori Radlherr, DL8MBT, flori@t-online.de

Description
A Packet Bulleting Board System for Linux.

Status
Version 1.38, stable.

Updated
01 Apr 97

System Requirements
Recommended hardware is 80486/33Mhz with 8MB RAM

Detail
Unfortunately the documentation is in German and I'm unable to
understand most of it. I get the impression though that this is
a BBS that supports all of the usual features on a packet radio

bbs, forwarding etc, but the documentation seems to suggest that the Linux version supports telnet access only. This isn't really a big constraint, as you can easily configure a session under the Linux ax25d program to accept AX.25/NetRom/Rose connections and connect the BBS via telnet.

If you're able to help by giving a better description, I'd appreciate it.

Where and how to obtain it
You can obtain the BayBOX from its home sites at:
members.aol.com <http://members.aol.com/baybox/>

Licensing/Copyright etc.
The BayCom-Mailbox software is intended for usage in amateur radio context only. Any usage outside of the amateur radio AX.25 network, especially commercial usage or distribution is prohibited. Within the scope of this limitation, usage and copying of the BayCom-Mailbox without fee is hereby granted. In any case of usage, the software is provided "as is" and comes with absolutely no warranty, neither implied nor expressed.
Contributed by
Iztok Saje, S52D, s52d@s55tcp.ampr.org

5.5. JNET

Author
Takeshi Shoji, JF2CEX, taka@myk.ilc.or.jp

Description
An enhanced version of KA9Q NOS for Linux and other platforms.

Status
Version 961210, Stable, released.

Updated
01 Apr 97

System Requirements
No special system requirements, requires KISS TNC.

Detail
This another actively maintained derivative of the KA9Q NOS package. This version has been ported to a wide range of alternative platforms and offers some enhancements not available in other NOS derivatives. A small catch is that most of the documentation is in Japanese.

Where and how to obtain it
You can obtain the latest version of JNET from its home site at:
www.myk.ilc.or.jp
<http://www.myk.ilc.or.jp/~taka/software.html#jnetcex>.

Licensing/Copyright etc.
I'm actually not sure. I suspect though that as a NOS derivative
it is freely usable by amateur radio operators.

Contributed by
Isao SEKI, http://www.prug.or.jp/people/jm1wbb

5.6. XNet

Author
Richard R. Parry, W9IF, rparry@qualcomm.com

Description
A traffic analyser for AX.25 networks.

Status
Stable, released.

Updated
01 Apr 97

System Requirements
TCL-7.5/Tk-4.1, KISS TNC.

Detail
The XNet software provides a variety of tools that an AX.25 lan
manager could use to analyze and manage traffic. The tools
present a graphical view of all of the traffic received at the
monitoring node allowing the observer to easily see where the
traffic flows normally and other information such as:
- Packet counts
- Node statistics
- Network Utilisation figures

The network is displayed with icons representing hosts and lines
between them representing the traffic flow. The graphical
display provides an instantly absorbable view of the traffic on
the network being monitored. Richard has more information and
sample displays at: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet.html>.

Where and how to obtain it
You can obtain the software from: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet/xnet-1.1.tar>

Licensing/Copyright etc.
XNET is a freeware program. It may be freely distributed.

Contributed by
Richard Parry, W9IF

5.7. monax25

Author
Skip Hansen, WB6YMH and Harold Price, NK6K.

Maintained by
Jonathon Naylor, jsn@cs.nott.ac.uk

Description
The monax25 provides a number of utilities for collecting
statistics on AX.25 channel usage.

Status
Version 1.11, Stable

Updated
01 Apr 97

System Requirements
KISS TNC.

Detail
The original ax25mon programs were written for MSDOS. This
package is a port of that software to Linux.

Where and how to obtain it
The `monax25' package may be obtained from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Freely copyable, not GPL though.

5.8. splitscreen

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Split screen `ttylink' style program with scroll back and log to
file.

Status
Version 1.4.1, stable.

Updated
01 Apr 97

System Requirements
Requires the `ncurses' package.

Detail
The splitscreen is a unix implementation of the NOS ttylink
command. It provides a splitscreen display that makes user to
user chats much easier than the usual telnet interface. The
scroll back buffer and log to file features are useful when you
use the splitscreen program to access services like convers.

Where and how to obtain it
The `splitscreen' package is available from: sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright etc.
Public Domain

5.9. talk-ax25

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Berkeley `talk' client modified to support Linux AX.25

Status
Version 960426, working.

System Requirements
Requires the `ncurses' package.

Detail
The `talk-ax25' program is a modifed version of the conventional Berkeley `talk' program to support Linux AX.25 operation.

Where and how to obtain it
The `talk-ax25' program is available from: sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or from:
ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Berkeley style. Freely distributable, copyright messages must be retained.

5.10. 7Plus for Linux

Author
Axel Bauda, DG1BBQ, DG1BBQ@DB0CL.#HB.DEU.EU

Description
Uuencode-like file coder for BBS Send and Forward of binary files.

System Requirements
none special

Detail
Provides the ability to 7Plus encode binary files to allow them to be transmitted within AX.25 BBS messages.

Where and how to obtain it
The `7pl217sr' encoder package is available from:
sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Hamware - Free for use by amateur radio use.

5.11. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features many enhancements not found in other NOS versions.

Status
Version 2.21. Stable.

Updated
01 Apr 97

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/unix/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.12. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.
Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

Updated
01 Apr 97

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a
compatible set of commands with the RLI bbs so users will be
familiar with it immediately. It then extends the command set
to be a very nice natural language style interface (e.g "list at
allus about KPC-3"). Many csh style bang commands are supported.
Also included is a mail interface to provide a packet to
internet gateway.

Currently you need to customize the source code for your
installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to
rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com.
This code is not packaged for distribution yet since it is not
past the alpha stage of development.

A version of the software is available from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/packet/n0ary/>

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, KF0UW

5.13. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25
kernel code or with the Wampes package.

Status
In development, working.

Updated
01 Apr 97

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could
build a Packet BBS to smtp gateway for Linux. I'm not sure what
the current status is as the last version I could find was dated

30 Jun 1995. The latest binary version supports:
• MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

• various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

• Simple dialer, to allow connections through AX.25 or NetROM nodes.

• White Pages

• Transient handling of type A (ACK messages).

• SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

• Message filter mechanism

• Field swapping (like SWAPP.SYS in FBB).

• Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain the `LBBS' package from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.14. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

Updated
01 Apr 97

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.15. CLX Packet DX Cluster Program

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Current version 2.07

Updated
01 Apr 97

System Requirements
Linux Kernel version 2.0 or greater, TCP/IP networking, SysV IPC. Also requires Perl and optionally Expect.

Detail
PacketCluster nodes have been available for about seven years. The original software was written by Dick Newell, AK1A, and is running under DOS. CLX is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical. Remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and CLX. So it fits well into an established network of PacketCluster nodes.

CLX is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

• It is fully compatible with the internal PCxx protocol and from a users point of view. It allows multitasking and different priorities.

• The software detects looping DX spots without generating endless messages. CLX filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". CLX knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by CLX users.
• An interface for extending CLX with your own programs and applications.

• Extended connectivity through the use of connect scripts. CLX now can build up and maintain virtually any connection using TCP/IP, UUCP or any other communication programs.

• CLX uses modern programming concepts like shared memory for common data, lex and yacc to implement command language, shared libraries to keep binaries small, remote procedure calls for interprocess communication. It is strictly modularized with its own dedicated process for every major task.

• Comprises of several modules running as separate processes.

Where and How to obtain it
You can obtain the software from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

00Index
clx_206.tgz
clx.txt
README

Licensing/Copyright
CLX (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to clx_us@dl6rai.muc.de to organise this.

Contributed by
Bernhard ("Ben") Buettner, DL6RAI

5.16. DPTNT Terminal and DPBOX BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0GR.#BLN.DEU.EU,

wahlm@berlin.snafu.de and Joachim Schurig, DL8HBS,
DL8HBS@DB0GR.#BLN.DEU.EU, h0187akk@rz.hu-berlin.de

Description
A suite of programs that provide BBS and Terminal programs for
Linux.

Status
Stable and working.

Updated
01 Apr 97

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it
on Linux is as difficult as untarring the source and typing
`make'. It provides both a `dumb' terminal and X11 version. It
comes with some comprehensive documentation which describes its
features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual
screens that you can switch between. Each session window
provides split screen (seperate transmit and receive text)
operation with a status line. Commands can be entered in
either a command session, or in any terminal session using a
command key. Each of the virtual screens can be larger than
the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text
to files. You can log transmit, receive or both to a log
file. You can overwrite or append received data to existing
files. You can use the `autobin' protocol to transmit or
receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can
access other programs on your computer. You can also run a
program and direct its input/output to a channel so that
users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a
device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do

so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

New versions will support the Linux kernel AX.25 code.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
The `dptnt' package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG <http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>

Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.17. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an

IPIP encapsulating gateway. Note, this probably isn't necessary any more in most installations because recent kernel support a kernel device to perform encapsulation.

Status
Ron is running this code himself, and the other version have been run quite successfully.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

Note:
You may want to consider using kernel based tunnel daemon now instead.

5.18. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an AXIP encapsulating gateway.

Status
Not properly tested, but assumed to work ok.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It allows you to encapsulate AX.25 frames in IP to carry them across the Internet. This is useful for linking AX.25 networks in remote areas. Ron has supplied a Makefile for linux, and with it the software compiled without errors on my system running a recent version kernel. Ron has also written some README files which give you the detail necessary to compile the system and the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>. An enhanced version of this software is included in recent versions of the Linux AX.25 utilities. Refer to the AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html> for more information.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is not removed.

Contributed by:
Ron Atkinson, N8FOW

5.19. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, dc6iq@insu1.etec.uni-karlsruhe.de, and Brian Lantz brian@lantz.com.

Description
This is a version of the convers server that allows multiple users to simultaneously chat with each other in a round-table style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics. Brian Lantz has further enhanced the software with additional features.

Status
In use of a number of popular convers servers, appears very stable.

Updated
01 Apr 97

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.

5.20. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz csmall@triode.apana.org.au

Description
An implementation of the Radio Shortest path First routing protocol for linux. The daemon supports version 2.2 of the protocol which corrects a lot of bugs and problems that were present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version is 0.08

Updated
01 Apr 97

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It addresses some of the quirks of RSPF v2.1, the version in NOS which means that it is incompatible with the NOS version. It will also allows remote/local queries via a tcp session for debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu

<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the
author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small, VK2XLZ

5.21. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, mwestfal@.csci.csusb.edu

Description
A split screen terminal program that listens on the ttylink port
and accepts incoming connection requests.

Status
Seems to work fine.

Updated
01 Apr 97

System requirements
none special.

Detail
This is a standalone program that does require you to change the
configuration of your system at all. If you have root access on
your machine then you run the program in a VT or in an XTerm and
it will clear the screen and wait for an incoming connection on
port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.22. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, csmall@triode.apana.org.au

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and convert it into a talk request for a user on the host machine. This may also be configured for use with the ax25d program so that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

Updated
01 Apr 97

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't actually defined anywhere (except the source), the ttylink protocol from NOS has become the defacto standard, at least for amateurs, to provide keyboard to keyboard communication over tcp/ip. This daemon fills the need for something to answer ttylink requests to linux machines.

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

An slightly enhanced version of this software is now included in the Linux AX25 utilities package.

Licensing/Copyright
GNU Public License vers 2.0

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. Pileup

Author
Richard Everitt G4ZFE richard@babbage.demon.co.uk. Based on sccw by Steve Merrifield.

Description
CW pileup training program

Status
v1.0. Stable but extra development planned.

Updated
01 Apr 97

System requirements
Linux supported sound card

Detail
CW pileup trainer (similar to PED) based on sccw. Up to 9
stations calling at once with variable CW speed and tone/volume
to simulate a pileup. Callsigns are taken from the 1996 CQ WW
CW contest entry of M6A to add some realism.

I fed /usr/dict/words to the program and it was quite a chuckle.
So even if you aren't into Morse it is worth trying out just for
the giggle.

Where and How to obtain it.
You can obtain the pileup package from its home site at: Pileup
Home Page <http://www.babbage.demon.co.uk/pileup.html> or
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

Contributed by
Richard Everitt G4ZFE richard@babbage.demon.co.uk.

6.2. bip

Author
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr. 24 rue de
l'Oasis, 92800 Puteaux, France

Description
A program to learn Morse code (for various Unix-like platforms)

- --- BEGIN Linux AX25 HOWTO part 1/3 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v1.4, 20 June 1997

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25, NetRom and
Rose support for Linux. A few typical configurations are described
that could be used as models to work from.

The Linux implementation of the amateur radio protocols is very
flexible. To people relatively unfamiliar with the Linux operating
system the configuration process may look daunting and complicated. It
will take you a little time to come to understand how the whole thing
fits together. You will find configuration very difficult if you have
not properly prepared yourself by learning about Linux in general. You
cannot expect to switch from some other environment to Linux without
learning about Linux itself.

1.1. Changes from the previous version

Additions:
Added the section missing from the BayCom configuration section.
Added 'hdlcdrv' to the list of modules needed to 'insmod' for BayCom.
Added Rose Uplink and Downlink configuration - thanks Rick

Corrections/Updates:
Added kernel compile options into low level configuration section.
```

Removed that nasty axctl error.
Many small changes here and there to the BayCom and SoundModem sections.
Hopefully I've unconfused the kernel/tools issue.
Updated the home ftp site.

ToDo:
Fix up the SCC section, this is probably wrong.
Expand on the programming section.
Add some references to AX.25 and NetRom source documentation.

1.2. Other related documentation.

There is a lot of related documentation. There are many documents that relate to Linux networking in more general ways and I strongly recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/HAM-HOWTO.html>,

the NET-3-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/NET-3-HOWTO.html>,

the Ethernet-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Ethernet-HOWTO.html>,

and:

the Firewall-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Firewall-HOWTO.html>

More general Linux information may be found by reference to other Linux HOWTO <http://sunsite.unc.edu/LDP/HOWTO/> documents.

2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as The AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html>. You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

3. The Packet Radio Protocols and Linux.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25. The NetRom protocol features dynamic routing and node aliases.

The Rose protocol was conceived and first implemented by Tom Moulton W2VY and is an implementation of the X.25 packet layer protocol and is designed to operate with AX.25 as its datalink layer protocol. It too provides a network layer. Rose addresses take the form of 10 digit numbers. The first four digits are called the Data Network Identification Code (DNIC) and are taken from Appendix B of the CCITT X.121 recommendation. More information on the Rose protocol may be ontained from the RATS Web server <http://www.rats.org/>.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom and Rose support and is now the developer of the AX.25 related kernel code. DAMA support was developed by Joerg, DL1BKE, jreuter@lykos.tng.oche.de. Baycom and SoundModem support were added by Thomas Sailer, <sailer@ife.ee.ethz.ch>. The AX.25 utility software is now maintained by me.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems. Thomas's new soundmodem driver supports Soundblaster and soundcards based on the Crystal chipset.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

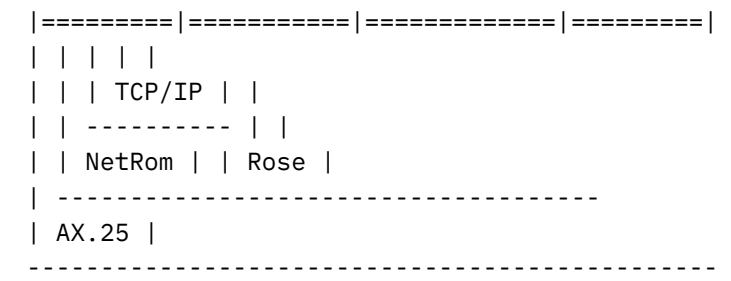
3.1. How it all fits together.

The Linux AX.25 implementation is a brand new implementation. While in many ways it may looks similar to NOS, or BPQ or other AX.25 implementations, it is none of these and is not identical to any of them. The Linux AX.25 implementation is capable of being configured to behave almost identically to other implementations, but the configuration process is very different.

To assist you in understanding how you need to think when configuring this section describes some of the structural features of the AX.25 implementation and how it fits into the context of the overall Linux structure.

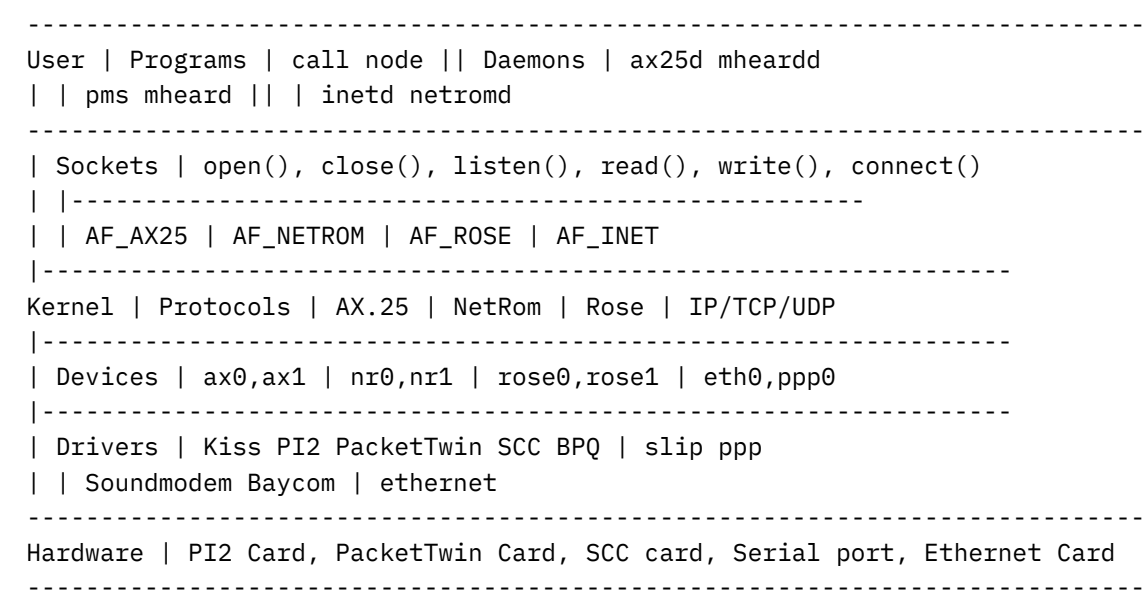
Simplified Protocol Layering Diagram

```
-----------------------------------------------
| AF_AX25 | AF_NETROM | AF_INET | AF_ROSE |
```



This diagram simply illustrates that NetRom, Rose and TCP/IP all run directly on top of AX.25, but that each of these protocols is treated as a seperate protocol at the programming interface. The `AF_' names are simply the names given to the `Address Family' of each of these protocols when writing programs to use them. The important thing to note here is the implicit dependence on the configuration of your AX.25 devices before you can configure your NetRom, Rose or TCP/IP devices.

Software module diagram on Linux Network Implementation



User | Programs | call node || Daemons | ax25d mheardd
| | pms mheard || | inetd netromd
Sockets | open(), close(), listen(), read(), write(), connect()
AF_AX25 | AF_NETROM | AF_ROSE | AF_INET
Kernel | Protocols | AX.25 | NetRom | Rose | IP/TCP/UDP
Devices | ax0,ax1 | nr0,nr1 | rose0,rose1 | eth0,ppp0
Drivers | Kiss PI2 PacketTwin SCC BPQ | slip ppp
| | Soundmodem Baycom | ethernet
Hardware | PI2 Card, PacketTwin Card, SCC card, Serial port, Ethernet Card

This diagram is a little more general than the first. This diagram attempts to show the relationship between user applications, the ker&#65533;nel and the hardware. It also shows the relationship between the Socket application programming interface, the actual protocol modules, the kernel networking devices and the device drivers. Anything in this diagram is dependent on anything underneath it, and in general you must configure from the bottom of the diagram upwards. So for exam&#65533;ple, if you want to run the call program you must also configure the Hardware, then ensure that the kernel has the appropriate device driver, that you create the appropriate network device, that the ker&#65533;nel includes the desired protocol that presents a programming inter&#65533;face that the call program can use. I have attempted to lay out this document in roughly that order.

4. The AX.25/NetRom/Rose software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 2.0.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. These have been significantly enhanced in the 2.1.* kernels. Unfortunately, the rest of the 2.1.* kernels makes them fairly unstable at the moment and not a good choice for a production system. To solve this problem Jonathon Naylor has prepared a patch kit which will bring the amateur radio protocol support in a 2.0.28 kernel up to the standard of the 2.1.* kernels. This is very simple to apply, and provides a range of facilities not present in the standard kernel such as Rose support.

4.1. Finding the kernel, tools and utility packages.

4.1.1. The kernel source:

The kernel source can be found in its usual place at:

ftp.funet.fi

/pub/Linux/PEOPLE/Linus/v2.0/linux-2.0.30.tar.gz

The current version of Jonathons upgrade patch is available at:

ftp.pspt.fi

/pub/linux/ham/ax25/ax25-module-14b.tar.gz

4.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at:

ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.33.tar.gz

The latest ipfwadm package can be found at:

ftp.xos.nl

/pub/linux/ipfwadm/

4.1.3. The AX25 utilities:

There are two different families of AX25-utilities. One is for the 2.0.* kernels and the other will work with either the 2.1.* kernels or the 2.0.*+moduleXX kernels. The ax25-utils version number indicate the oldest version of kernel that they will work with. Please choose a version of the ax25-utils appropriate to your kernel. The following are working combinations. You must use one of the following combinations, any other combination will not work, or will not work well.

```
Linux Kernel AX25 Utility set
-------------------- -------------------------
linux-2.0.29 ax25-uitls-2.0.12c.tar.gz
linux-2.0.28+module12 ax25-utils-2.1.22b.tar.gz
linux-2.0.30+module14 ax25-utils-2.1.42.tar.gz
linux-2.1.22++ ax25-utils-2.1.22b.tar.gz
linux-2.1.42++ ax25-utils-2.1.42.tar.gz
```

The AX.25 utility programs can be found at:

ftp.pspt.fi <ftp://ftp.pspt.fi/pub/linux/ham/ax25/>

or at:

sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

5. Installing the AX.25/NetRom/Rose software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

5.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# tar xvfz linux-2.0.30.tar.gz
# tar xvfz /pub/net/ax25/ax25-module-14b.tar.gz
# patch -p0 </usr/src/ax25-module-14b/ax25-2.0.30-2.1.42-5.diff
# cd linux
```

After you have unpacked the kernel source and applied the upgrade, you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make menuconfig
```

You might also try:

```
# make config
```

I'm going to describe the full screen method (menuconfig) because it is easier to move around, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Code maturity level options --->
...
[*] Prompt for development and/or incomplete code/drivers
...
General setup --->
...
[*] Networking support
...
Networking options --->
...
[*] TCP/IP networking
[?] IP: forwarding/gatewaying
...
[?] IP: tunneling
...
[?] IP: Allow large windows (not recommended if <16Mb of memory)
...
[*] Amateur Radio AX.25 Level 2
[?] Amateur Radio NET/ROM
[?] Amateur Radio X.25 PLP (Rose)
...
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[?] BAYCOM ser12 and par96 driver for AX.25
[?] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
[?] Serial port KISS driver for AX.25
[?] BPQ Ethernet driver for AX.25
[?] Gracilis PackeTwin support for AX.25
[?] Ottawa PI and PI/2 support for AX.25
[?] Z8530 SCC KISS emulation driver for AX.25
...
```

The options I have flagged with a `*' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what other options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able
to cleanly compile your new kernel:

```
# make dep
# make clean
# make zImage
```

maake sure you move your arch/i386/boot/zImage file wherever you want
it and then edit your /etc/lilo.conf file and rerun lilo to ensure
that you actually boot from it.

5.1.1. A word about Kernel modules

I recommend that you don't compile any of the drivers as modules. In
nearly all installations you gain nothing but additional complexity.
Many people have problems trying to get the modularised components
working, not because the software is faulty but because modules are
more complicated to install and configure.

If you've chosen to compile any of the components as modules, then
you'll also need to use:

```
# make modules
# make modules_install
```

to install your modules in the appropriate location.

You will also need to add some entries into your /etc/conf.modules
file that will ensure that the kerneld program knows how to handle the
kernel modules. You should add/modify the following:

```
alias net-pf-3 ax25
alias net-pf-6 netrom
alias net-pf-11 rose
alias tty-ldisc-1 slip
alias tty-ldisc-3 ppp
alias tty-ldisc-5 mkiss
alias bc0 baycom
alias nr0 netrom
alias pi0a pi2
alias pt0a pt
alias scc0 optoscc (or one of the other scc drivers)
alias sm0 soundmodem
alias tunl0 newtunnel
alias char-major-4 serial
alias char-major-5 serial
alias char-major-6 lp
```

5.1.2. What's new in 2.0.*+ModuleXX or 2.1.* Kernels ?

The 2.1.* kernels have enhanced versions of nearly all of the
protocols and drivers. The most significant of the enhancements are:

modularised
the protocols and drivers have all been modularised so that you

can insmod and rmmod them whenever you wish. This reduces the
kernel memory requirements for infrequently used modules and
makes development and bug hunting much simpler. That being said,
it also makes configuration slightly more difficult.

All drivers are now network drivers
all of the network devices such as Baycom, SCC, PI, Packettwin
etc now present a normal network interface, that is they now
look like the ethernet driver does, they no longer look like
KISS TNC's. A new utility called net2kiss allows you to build a
kiss interface to these devices if you wish.
bug fixed
there have been many bug fixes and new features added to the
drivers and protocols. The Rose protocol is one important
addition.

5.2. The network configuration tools.

Now that you have compiled the kernel you should compile the new
network configuration tools. These tools allow you to modify the
configuration of network devices and to add routes to the routing
table.

The new alpha release of the standard net-tools package includes
support for AX.25 and NetRom support. I've tested this and it seems to
work well for me.

5.2.1. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions
there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.33.tar.gz
# cd net-tools-1.33
# make config
```

At this stage you will be presented with a series of configuration
questions, similar to the kernel configuration questions. Be sure to
include support for all of the protocols and network devices types
that you intend to use. If you do not know how to answer a particular
question then answer `Y'.

The tools will compile cleanly against the source after you remove the
first line "usage und man page, info text von alexey" from the file
arp.c.

When the compilation is complete, you should use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the
latest firewall administration tool ipfwadm. This tool replaces the
older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

5.3. The AX.25 user and utility programs.

After you have successfully compiled and booted your new kernel, you
need to compile the user programs. To compile and install the user
programs you should use a series of commands similar to the following:

```
# cd /usr/src
# tax xvfz ax25-utils-2.1.42.tar.gz
# cd ax25-utils-2.1.42
# make config
# make
# make install
```

The files will be installed under the /usr directory by default in
subdirectories: bin, sbin, etc and man.

If this is a first time installation, that is you've never installed
any ax25 utilities on your machine before you should also use the:

```
# make installconf
```

command to install some sample configuration files into the /etc/ax25/
directory from which to work.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should double check that you have the ncurses package
properly installed on your system. The configuration script attempts
to locate your ncurses packages in the common locations, but some
installations have ncurses badly installed and it is unable to locate
them.

6. A note on callsigns, addresses and things before we start.

Each AX.25 and NetRom port on your system must have a callsign/ssid
allocated to it. These are configured in the configuration files that

will be described in detail later on.

Some AX.25 implementations such as NOS and BPQ will allow you to configure the same callsign/ssid on each AX.25 and NetRom port. For somewhat complicated technical reasons Linux does not allow this. This isn't as big a problem in practise as it might seem.

This means that there are things you should be aware of and take into consideration when doing your configurations.

1. Each AX.25 and NetRom port must be configured with a unique callsign/ssid.

2. TCP/IP will use the callsign/ssid of the AX.25 port it is being transmitted or received by, ie the one you configured for the AX.25 interface in point 1.

3. NetRom will use the callsign/ssid specified for it in its configuration file, but this callsign is only used when your NetRom is speaking to another NetRom, this is not the callsign/ssid that AX.25 users who wish to use your NetRom `node' will use. More on this later.

4. Rose will, by default, use the callsign/ssid of the AX.25 port, unless the Rose callsign has been specifically set using the `rsparms' command. If you set a callsign/ssid using the `rsparms' command then Rose will use this callsign/ssid on all ports.

5. Other programs, such as the `ax25d' program can listen using any callsign/ssid that they wish and these may be duplicated across different ports.

6. If you are careful with routing you can configure the same IP address on all ports if you wish.

6.1. What are all those T1, T2, N2 and things ?

Not every AX.25 implementation is a TNC2. Linux uses nomenclature that differs in some respects from that you will be used to if your sole experience with packet is a TNC. The following table should help you interpret what each of the configurable items are, so that when you come across them later in this text you'll understand what they mean.

Linux	TAPR TNC	Description
T1	FRACK	How long to wait before retransmitting an unacknowledged frame.
T2	RESPTIME	The minimum amount of time to wait for another frame to be received before transmitting an acknowledgement.
T3	CHECK	The period of time we wait between sending

| | a check that the link is still active.

N2 | RETRY | How many times to retransmit a frame before
| | assuming the connection has failed.

Idle | | The period of time a connection can be idle
| | before we close it down.

Window | MAXFRAME | The maximum number of unacknowledged
| | transmitted frames.

6.2. Run time configurable parameters

The 2.1.* and 2.0.* +moduleXX kernels have a new feature that allows you to change many previously unchangable parameters at run time. If you take a careful look at the /proc/sys/net/ directory structure you will see many files with useful names that describe various parameters for the network configuration. The files in the /proc/sys/net/ax25/ directory each represents one configured AX.25 port. The name of the file relates to the name of the port.

The structure of the files in /proc/sys/net/ax25/<portname>/ is as follows:

FileName Meaning Values Default
ip_default_mode IP Default Mode 0=DG 1=VC 0
ax25_default_mode AX.25 Default Mode 0=Normal 1=Extended 0
backoff_type Backoff 0=Linear 1=Exponential 1
connect_mode Connected Mode 0=No 1=Yes 1
standard_window_size Standard Window 1 <= N <= 7 2
extended_window_size Extended Window 1 <= N <= 63 32
t1_timeout T1 Timeout 1s <= N <= 30s 10s
t2_timeout T2 Timeout 1s <= N <= 20s 3s
t3_timeout T3 Timeout 0s <= N <= 3600s 300s
idle_timeout Idle Timeout 0m <= N 20m
maximum_retry_count N2 1 <= N <= 31 10
maximum_packet_length AX.25 Frame Length 1 <= N <= 512 256

In the table T1, T2 and T3 are given in seconds, and the Idle Timeout is given in minutes. But please note that the values used in the sysctl interface are given in internal units where the time in seconds is multiplied by 10, this allows resolution down to 1/10 of a second. With timers that are allowed to be zero, eg T3 and Idle, a zero value indicates that the timer is disabled.

The structure of the files in /proc/sys/net/netrom/ is as follows:

FileName Values Default
default_path_quality 10
link_fails_count 2
network_ttl_initialiser 16

obsolescence_count_initialiser 6
routing_control 1
transport_acknowledge_delay 50
transport_busy_delay 1800
transport_maximum_tries 3
transport_requested_window_size 4
transport_timeout 1200

The structure of the files in /proc/sys/net/rose/ is as follows:

FileName Values Default
acknowledge_hold_back_timeout 50
call_request_timeout 2000
clear_request_timeout 1800
link_fail_timeout 1200
maximum_virtual_circuits 50
reset_request_timeout 1800
restart_request_timeout 1800
routing_control 1
window_size 3

To set a parameter all you need to do is write the desired value to
the file itself, for example to check and set the Rose window size
you'd use something like:

```
# cat /proc/sys/net/rose/window_size
3
# echo 4 >/proc/sys/net/rose/window_size
# cat /proc/sys/net/rose/window_size
4
```

7. Configuring an AX.25 port.

Each of the AX.25 applications read a particular configuration file to
obtain the parameters for the various AX.25 ports configured on your
Linux machine. For AX.25 ports the file that is read is the
/etc/ax25/axport file. You must have an entry in this file for each
AX.25 port you want on your system.

7.1. Creating the AX.25 network device.

The network device is what is listed when you use the `ifconfig'
command. This is the object that the Linux kernel sends and receives
network data from. Nearly always the network device has a physical
port associated with it, but there are occasions where this isn't
necessary. The network device does relate directly to a device driver.

In the Linux AX.25 code there are a number of device drivers. The most
common is probably the KISS driver, but others are the SCC driver(s),
the Baycom driver and the SoundModem driver.
Each of these device drivers will create a network device when it is
started.

7.1.1. Creating a KISS device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Serial port KISS driver for AX.25
```

Probably the most common configuration will be for a KISS TNC on a serial port. You will need to have the TNC preconfigured and connected to your serial port. You can use a communications program like minicom or seyon to configure the TNC into kiss mode.

To create a KISS device you use the kissattach program. In it simplest form you can use the kissattach program as follows:

```
# /usr/sbin/kissattach /dev/ttyS0 radio
# kissparms -p radio -t 100 -s 100 -r 25
```

The kissattach command will create a KISS network device. These devices are called `ax[0-9]'. The first time you use the kissattach command it creates `ax0', the second time it creates `ax1' etc. Each KISS device has an associated serial port.

The kissparms command allows you to set various KISS parameters on a KISS device.

Specifically the example presented would create a KISS network device using the serial device `/dev/ttyS0' and the entry from the /etc/ax25/axports with a port name of `radio'. It then configures it with a txdelay and slottime of 100 milliseconds and a ppersist value of 25.

Please refer to the man pages for more information.

7.1.1.1. Configuring for Dual Port TNC's

The mkiss utility included in the ax25-utils distribution allows you to make use of both modems on a dual port TNC. Configuration is fairly simple. It works by taking a single serial device connected to a single multiport TNC and making it look like a number of devices each connected to a single port TNC. You do this before you do any of the AX.25 configuration. The devices that you then do the AX.25 configuration on are pseudo-TTY interfaces, (/dev/ttyp*), and not the actual serial device. Pseudo-TTY devices create a kind of pipe through which programs designed to talk to tty devices can talk to other programs designed to talk to tty devices. Each pipe has a master and a slave end. The master end is generally called `/dev/ptyp*' and the slave ends are called `/dev/ttyp*'. There is a one to one relationship between masters and slaves, so /dev/ptyp0 is the master end of a pipe with /dev/ttyp0 as its slave. You must open the master end of a pipe

before opening the slave end. mkiss exploits this mechanism to split a single serial device into seperate devices.

Example: if you have a dual port tnc and it is connected to your /dev/ttyS0 serial device at 9600 bps, the command:

```
# /usr/sbin/mkiss -s 9600 /dev/ttyS0 /dev/ptyp0 /dev/ptyp1
# /usr/sbin/kissattach /dev/ttyp0 port1
# /usr/sbin/kissattach /dev/ttyp1 port2
```

would create two pseudo-tty devices that each look like a normal single port TNC. You would then treat /dev/ttyp0 and /dev/ttyp1 just as you would a conventional serial device with TNC connected. This means you'd then use the kissattach command as described above, on each of those, in the example for AX.25 ports called port1 and port2. You shouldn't use kissattach on the actual serial device as the mkiss program uses it.

The mkiss command has a number of optional arguments that you may wish to use. They are summarised as follows:

-c enables the addition of a one byte checksum to each KISS frame. This is not supported by most KISS implementation, it is supported by the G8BPG KISS rom.

-s <speed>
sets the speed of the serial port.

-h enables hardware handshaking on the serial port, it is off by default. Most KISS implementation do not support this, but some do.

-l enables logging of information to the syslog logfile.

7.1.2. Creating a Baycom device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] BAYCOM ser12 and par96 driver for AX.25
```

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced PicPar parallel port modems. Further information about the modems themselves may be obtained from the Baycom Web site <http://www.baycom.de/>.

Your first step should be to determine the i/o and addresses of the serial or parallel port(s) you have Baycom modem(s) connected to. When you have these you must configure the Baycom driver with them.

The BayCom driver creates network devices called: bc0, bc1, bc2 etc. when it is configured.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one Baycom modem installed you may specify the parameters on the insmod commmand line when you load the Baycom module.

For example, a simple configuration. Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod hdlcdrv
# insmod baycom mode="ser12*" iobase=0x3f8 irq=4
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod hdlcdrv
# insmod baycom mode="par96" iobase=0x378 irq=7 options=0
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the Baycom module using:

```
# insmod hdlcdrv
# insmod baycom
```

or that you compiled the kernel with the driver inbuilt.

Configure the bc0 device driver as a Parallel port Baycom modem on LPT1: with software DCD:

```
# sethdlc -p -i bc0 mode par96 io 0x378 irq 7
```

Configure the bc1 device driver as a Serial port Baycom modem on COM1:

```
# sethdlc -p -i bc1 mode "ser12*" io 0x3f8 irq 4
```

7.1.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. Again you use the sethdlc utility for this.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the bc0 device with TxDelay of 200 mS, SlotTime of 100 mS, PPersist of 40 and half duplex:

```
# sethdlc -i bc0 -a txd 200 slot 100 ppersist 40 half
```

Note that the timing values are in milliseconds.

7.1.3.1. Configuring the Kernel AX.25 to use the BayCom device

The BayCom driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig bc0 hw ax25 VK2KTJ-15 up
```

will assign the BayCom device bc0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, you'll still need to use the ifconfig command to bring the device up though:

```
# ifconfig bc0 up
# axparms -setcall bc0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the BayCom device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

7.1.4. Creating a SoundModem device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
```

Thomas Sailer has built a new driver for the kernel that allows you to use your soundcard as a modem. Connect your radio directly to your soundcard to play packet! Thomas recommends at least a 486DX2/66 if you want to use this software as all of the digital signal processing is done by the main CPU.

The driver currently emulates 1200 bps AFSK, 4800 HAPN and 9600 FSK (G3RUH compatible) modem types. The only sound cards currently supported are SoundBlaster and WindowsSoundSystem Compatible models. The sound cards require some circuitry to help them drive the Push-To-Talk circuitry, and information on this is available from Thomas's SoundModem PTT circuit web page <http://www.ife.ee.ethz.ch/~sailer/pcf/ptt_circ/ptt.html>. There are quite a few possible options, they are: detect the sound output from the soundcard, or use output from a parallel port, serial port or midi port. Circuit examples for each of these are on Thomas's site.

The SoundModem driver creates network devices called: sm0, sm1, sm2 etc when it is configured.

Note: the SoundModem driver competes for the same resources as the Linux sound driver. So if you wish to use the SoundModem driver you must ensure that the Linux sound driver is not installed. You can of course compile them both as modules and insert and remove them as you wish.

7.1.4.1. Configuring the sound card.

The SoundModem driver does not initialise the sound card. The ax25-utils package includes a utility to do this called `setcrystal' that may be used for SoundCards based on the Crystal chipset. If you have some other card then you will have to use some other software to initialise it. Its syntax is fairly straightforward:

setcrystal [-w wssio] [-s sbio] [-f synthio] [-i irq] [-d dma] [-c dma2]

So, for example, if you wished to configure a soundblaster card at i/o base address 0x388, irq 10 and DMA 1 you would use:
setcrystal -s 0x388 -i 10 -d 1

To configure a WindowSoundSystem card at i/o base address 0x534, irq 5, DMA 3 you would use:

setcrystal -w 0x534 -i 5 -d 3

The [-f synthio] parameter is the set the synthesiser address, and the [-c dma2] parameter is to set the second DMA channel to allow full duplex operation.

7.1.4.2. Configuring the SoundModem driver.

When you have configured the soundcard you need to configure the driver telling it where the sound card is located and what sort of modem you wish it to emulate.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one soundcard installed you may specify the parameters on the insmod commmand line when you load the SoundModem module.

For example, a simple configuration, with one SoundBlaster soundcard configured as described above emulating a 1200 bps modem:

```
# insmod hdlcdrv
# insmod soundmodem mode="sbc:afsk1200" iobase=0x220 irq=5 dma=1
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the SoundModem modules using:

```
# insmod hdlcdrv
# insmod soundmodem
```

or that you compiled the kernel with the driver inbuilt.

Configure the driver to support the WindowsSoundSystem card we configured above to emulate a G3RUH 9600 compatible modem as device sm0 using a parallel port at 0x378 to key the Push-To-Talk:

```
# sethdlc -p -i sm0 mode wss:fsk9600 io 0x534 irq 5 dma 3 pario 0x378
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 4800 bps HAPN modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:hapn4800 io 0x388 irq 10 dma 1 serio 0x2f8
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 1200 bps AFSK modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:afsk1200 io 0x388 irq 10 dma 1 serio 0x2f8
```

7.1.4.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. You use the sethdlc utility for this as well.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the sm0 device with TxDelay of 100 mS, SlotTime of 50mS, PPersist of 128 and full duplex:

```
# sethdlc -i sm0 -a txd 100 slot 50 ppersist 128 full
```

Note that the timing values are in milliseconds.

7.1.4.4. Setting the audio levels and tuning the driver.

It is very important that the audio levels be set correctly for any radio based modem to work. This is equally true of the SoundModem. Thomas has developed some utility programs that make this task easier. They are called smdiag and smmixer.

smdiag
provides two types of display, either an oscilloscope type display or an eye pattern type display.

smmixer
allows you to actually adjust the transmit and receive audio levels.

To start the smdiag utility in 'eye' mode for the SoundModem device sm0 you would use:

```
# smdiag -i sm0 -e
```

To start the smmixer utility for the SoundModem device sm0 you would use:

```
# smmixer -i sm0
```

7.1.4.5. Configuring the Kernel AX.25 to use the SoundModem

The SoundModem driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig sm0 hw ax25 VK2KTJ-15 up
```

will assign the SoundModem device sm0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, but you still need the ifconfig utility to bring the device up:

```
# ifconfig sm0 up
# axparms -setcall sm0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the SoundModem device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

7.1.5. Creating a PI card device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Ottawa PI and PI/2 support for AX.25
```

The PI card device driver creates devices named `pi[0-9][ab]'. The first PI card detected will be allocated `pi0', the second `pi1' etc. The `a' and `b' refer to the first and second physical interface on the PI card. If you have built your kernel to include the PI card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pi0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PI card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu>

7.1.6. Creating a PacketTwin device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Gracilis PackeTwin support for AX.25
```

The PacketTwin card device driver creates devices named `pt[0-9][ab]'. The first PacketTwin card detected will be allocated `pt0', the second `pt1' etc. The `a' and `b' refer to the first and second physical interface on the PacketTwin card. If you have built your kernel to include the PacketTwin card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pt0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PacketTwin card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>.

7.1.7. Creating a generic SCC device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Z8530 SCC KISS emulation driver for AX.25
```

Joerg Reuter, DL1BKE, jreuter@lykos.tng.oche.de has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

7.1.7.1. Obtaining and building the configuration tool package.

While the kernel driver is included in the standard kernel distribution, Joerg distributes more recent versions of his driver with the suite of configuration tools that you will need to obtain as well.

You can obtain the configuration tools package from:

db0bm.automation.fh-aachen.de

/incoming/dl1bke/

or:

insl1.etec.uni-karlsruhe.de

/pub/hamradio/linux/z8530/

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/linux
/hamradio/packet/tcpip/incoming/

You will find multiple versions, choose the one that best suits the kernel you intend to use:

z8530drv-2.4a.dl1bke.tar.gz 2.0.*
z8530drv-utils-3.0.tar.gz 2.1.6 or greater

The following command were what I used to compile and install the package for kernel version 2.0.25:

```
# cd /usr/src
# gzip -dc z8530drv-2.4a.dl1bke.tar.gz | tar xvpofz -
# cd z8530drv
# make clean
```

```
# make dep
# make module # If you want to build the driver as a module
# make for_kernel # If you want the driver to built into your kernel
# make install
```

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0 .. scc7. These will be used later and will be the `KISS' devices you will end up using.

If you chose to 'make for_kernel' then you will need to recompile your kernel. To ensure that you include support for the z8530 driver you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

If you chose to 'make module' then the new scc.o will have been installed in the appropriate /lib/modules directory and you do not need to recompile your kernel. Remember to use the insmod command to load the module before your try and configure it.

7.1.7.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.conf. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

```
# sccinit
```

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

7.1.7.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card

PRIMUS
the PRIMUS-PC (DG9BL) card

BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the

```
Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280.
The argument is a character string with allowed values of `yes'
or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector
latch (also known as "intack port") for PA0HZP cards. There can
be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the
special function register on several cards. The default is 0.

option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
#
#
#
chip 2
```

```
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card

chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

7.1.7.3. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.conf file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and specifies the name of the special device file that the rest of the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the
interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be
sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

7.1.7.4. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

kissattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:

attach asy scc0 0 ax25 scc0 256 256 4800

7.1.7.5. The sccstat and sccparam tools.

- --- BEGIN Linux AX25 HOWTO part 2/3 ---

To assist in the diagnosis of problems you can use the sccstat program
to display the current configuration of an SCC device. To use it try:

# sccstat /dev/scc0

you will displayed a very large amount of information relating to the
configuration and health of the /dev/scc0 SCC port.
The sccparam command allows you to change or modify a configuration
after you have booted. Its syntax is very similar to the NOS param
command, so to set the txtail setting of a device to 100mS you would
use:

# sccparam /dev/scc0 txtail 0x8

7.1.8. Creating a BPQ ethernet device.

Kernel Compile Options:

General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] BPQ Ethernet driver for AX.25

Linux supports BPQ Ethernet compatibility. This enables you to run the
AX.25 protocol over your Ethernet LAN and to interwork your linux
machine with other BPQ machines on the LAN.

The BPQ network devices are named `bpq[0-9]'. The `bpq0' device is
associated with the `eth0' device, the `bpq1' device with the `eth1'
device etc.
```

Configuration is quite straightforward. You firstly must have
configured a standard Ethernet device. This means you will have
compiled your kernel to support your Ethernet card and tested that
this works. Refer to the Ethernet-HOWTO <Ethernet-HOWTO.html> for more
information on how to do this.

To configure the BPQ support you need to configure the Ethernet device
with an AX.25 callsign. The following command will do this for you:

/sbin/ifconfig bpq0 hw ax25 vk2ktj-14 up

Again, remember that the callsign you specify should match the entry
in the /etc/ax25/axports file that you wish to use for this port.

7.1.9. Configuring the BPQ Node to talk to the Linux AX.25 support.

BPQ Ethernet normally uses a multicast address. The Linux
implementation does not, and instead it uses the normal Ethernet
broadcast address. The NET.CFG file for the BPQ ODI driver should
therefore be modifified to look similar to this:

LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1

LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARAMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address

7.2. Creating the /etc/ax25/axports file.

The /etc/ax25/axports is a simple text file that you create with a
text editor. The format of the /etc/ax25/axports file is as follows:

portname callsign baudrate paclen window description

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your

TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-15 4800 256 2 4800bps 144.800 MHz
ether VK2KTJ-14 10000000 256 2 BPQ/ethernet device

Remember, you must assign unique callsign/ssid to each AX.25 port you create. Create one entry for each AX.25 device you want to use, this includes KISS, Baycom, SCC, PI, PT and SoundModem ports. Each entry here will describe exactly one AX.25 network device. The entries in this file are associated with the network devices by the callsign/ssid. This is at least one good reason for requiring unique callsign/ssid.

7.3. Configuring AX.25 routing.

You may wish to configure default digipeaters paths for specific hosts. This is useful for both normal AX.25 connections and also IP based connections. The axparms command enables you to do this. Again, the man page offers a complete description, but a simple example might be:

/usr/sbin/axparms -route add radio VK2XLZ VK2SUT

This command would set a digipeater entry for VK2XLZ via VK2SUT on the AX.25 port named radio.

8. Configuring an AX.25 interface for TCP/IP.

It is very simple to configure an AX.25 port to carry TCP/IP. If you have KISS interfaces then there are two methods for configuring an IP address. The kissattach command has an option that allows you to do specify an IP address. The more conventional method using the ifconfig command will work on all interface types.

So, modifying the previous KISS example:

/usr/sbin/kissattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
/sbin/route add -net 44.136.8.0 netmask 255.255.255.0 ax0
/sbin/route add default ax0

to create the AX.25 interface with an IP address of 44.136.8.5 and an MTU of 512 bytes. You should still use the ifconfig to configure the

other parameters if necessary.

If you have any other interface type then you use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other TCP/IP interface. The following example is for a PI card device, but would work equally well for any other AX.25 network device:

```
# /sbin/ifconfig pi0a 44.136.8.5 netmask 255.255.255.0 up
# /sbin/ifconfig pi0a broadcast 44.136.8.255 mtu 512
# /sbin/route add -net 44.136.8.0 netmask 255.255.255.0 pi0a
# /sbin/route add default pi0a
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other TCP/IP software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

9. Configuring a NetRom port.

The NetRom protocol relies on, and uses the AX.25 ports you have created. The NetRom protocol rides on top of the AX.25 protocol. To configure NetRom on an AX.25 interface you must configure two files. One file describes the Netrom interfaces, and the other file describes which of the AX.25 ports will carry NetRom. You can configure multiple NetRom ports, each with its own callsign and alias, the same procedure applies for each.

9.1. Configuring /etc/ax25/nrports

The first is the /etc/ax25/nrports file. This file describes the NetRom ports in much the same way as the /etc/ax25/axports file describes the AX.25 ports. Each NetRom device you wish to create must have an entry in the /etc/ax25/nrports file. Normally a Linux machine would have only one NetRom device configured that would use a number of the AX.25 ports defined. In some situations you might wish a special service such as a BBS to have a seperate NetRom alias and so you would create more than one.

This file is formatted as follows:

```
name callsign alias paclen description
```

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use. Note, this is not that address that users should connect to to get access to a node style interface. (The node program is covered later). This callsign/ssid should be unique and should not appear elsewhere in either of the /etc/ax25/axports or the /etc/ax25/nrports files.

alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

netrom VK2KTJ-9 LINUX 236 Linux Switch Port

This example creates a NetRom port known to the rest of the NetRom network as `LINUX:VK2KTJ-9'.

This file is used by programs such as the call program.

9.2. Configuring /etc/ax25/nrbroadcast

The second file is the /etc/ax25/nrbroadcast file. This file may contain a number of entries. There would normally be one entry for each AX.25 port that you wish to allow NetRom traffic on.

This file is formatted as follows:

axport min_obs def_qual worst_qual verbose

Where:

axport
is the port name obtained from the /etc/ax25/axports file. If you do not have an entry in /etc/ax25/nrbroadcasts for a port then this means that no NetRom routing will occur and any received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts will occur from this port or only a routing broadcast

advertising the node itself.

An example would look something like the following:

radio 1 200 100 1

9.3. Creating the NetRom Network device

When you have the two configuration files completed you must create the NetRom device in much the same way as you did for the AX.25 devices. This time you use the nrattach command. The nrattach works in just the same way as the axattach command except that it creates NetRom network devices called `nr[0-9]'. Again, the first time you use the nrattach command it creates the `nr0' device, the second time it creates the `nr1' network devices etc. To create the network device for the NetRom port we've defined we would use:

nrattach netrom

This command would start the NetRom device (nr0) named netrom configured with the details specified in the /etc/ax25/nrports file.

9.4. Starting the NetRom daemon

The Linux kernel does all of the NetRom protocol and switching, but does not manage some functions. The NetRom daemon manages the NetRom routing tables and generates the NetRom routing broadcasts. You start NetRom daemon with the command:

/usr/sbin/netromd -i

You should soon see the /proc/net/nr_neigh file filling up with information about your NetRom neighbours.

Remember to put the /usr/sbin/netromd command in your rc files so that it is started automatically each time you reboot.

9.5. Configuring NetRom routing.

You may wish to configure static NetRom routes for specific hosts. The nrparms command enables you to do this. Again, the man page offers a complete description, but a simple example might be:

/usr/sbin/nrparms -nodes VK2XLZ-10 + #MINTO 120 5 radio VK2SUT-9

This command would set a NetRom route to #MINTO:VK2XLZ-10 via a neighbour VK2SUT-9 on my AX.25 port called `radio'.

You can manually create entries for new neighbours using the nrparms command as well. For example:

/usr/sbin/nrparms -routes radio VK2SUT-9 + 120

This command would create VK2SUT-9 as a NetRom neighbour with a quality of 120 and this will be locked and will not be deleted automatically.

10. Configuring a NetRom interface for TCP/IP.

Configuring a NetRom interface for TCP/IP is almost identical to configuring an AX.25 interface for TCP/IP.

Again you can either specify the ip address and mtu on the nrattach command line, or use the ifconfig and route commands, but you need to manually add arp entries for hosts you wish to route to because there is no mechanism available for your machine to learn what NetRom address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5, an mtu of 512 and configured with the details from the /etc/ax25/nrports file for a NetRom port named netrom you would use:

```
# /usr/sbin/nrattach -i 44.136.8.5 -m 512 netrom
# route add 44.136.8.5 nr0
```

or you could use something like the following commands manually:

```
# /usr/sbin/nrattach netrom
# ifconfig nr0 44.136.8.5 netmask 255.255.255.0 hw netrom VK2KTJ-9
# route add 44.136.8.5 nr0
```

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

11. Configuring a Rose port.

The Rose packet layer protocol is similar to layer three of the X.25 specification. The kernel based Rose support is a modified version of the FPAC Rose implementation <http://fpac.lmi.ecp.fr/f1oat/f1oat.html>.

The Rose packet layer protocol protocol relies on, and uses the AX.25 ports you have created. The Rose protocol rides on top of the AX.25 protocol. To configure Rose you must create a configuration file that describes the Rose ports you want. You can create multiple Rose ports if you wish, the same procedure applies for each.

11.1. Configuring /etc/ax25/rsports

The file where you configure your Rose interfaces is the /etc/ax25/rsports file. This file describes the Rose port in much the same way as the /etc/ax25/axports file describes the AX.25 ports.

This file is formatted as follows:

name addresss description

Where:

name
is the text name that you wish to refer to the port by.

address
is the 10 digit Rose address you wish to assign to this port.

description
is a free text description of the port.

An example would look something like the following:

rose 5050294760 Rose Port

Note that Rose will use the default callsign/ssid configured on each
AX.25 port unless you specify otherwise.

To configure a seperate callsign/ssid for Rose to use on each port you
use the rsparms command as follows:

/usr/sbin/rsprams -call VK2KTJ-10

This example would make Linux listen for and use the callsign/ssid
VK2KTJ-10 on all of the configured AX.25 ports for Rose calls.

11.2. Creating the Rose Network device.

When you have created the /etc/ax25/rsports file you may create the
Rose device in much the same way as you did for the AX.25 devices.
This time you use the rsattach command. The rsattach command creates
network devices named `rose[0-5]'. The first time you use the rsattach
command it create the `rose0' device, the second time it creates the
`rose1' device etc. For example:

rsattach rose

This command would start the Rose device (rose0) configured with the
details specified in the /etc/ax25/rsports file for the entry named
`rose'.

11.3. Configuring Rose Routing

The Rose protocol currently supports only static routing. The rsparms
utility allows you to configure your Rose routing table under Linux.

For example:

rsparms -nodes add 5050295502 radio vk2xlz

would add a route to Rose node 5050295502 via an AX.25 port named
`radio' in your /etc/ax25/axports file to a neighbour with the call&#65533;
sign VK2XLZ.

You may specify a route with a mask to capture a number of Rose destinations into a single routing entry. The syntax looks like:

rsparms -nodes add 5050295502/4 radio vk2xlz

which would be identical to the previous example except that it would match any destination address that matched the first four digits sup&#65533;plied, in this case any address commencing with the digits 5050. An alternate form for this command is:

rsparms -nodes add 5050/4 radio vk2xlz

which is probably the less ambiguous form.

12. Making AX.25/NetRom/Rose calls.

Now that you have all of your AX.25, NetRom and Rose interfaces configured and active, you should be able to make test calls.

The AX25 Utilities package includes a program called `call' which is a splitscreen terminal program for AX.25, NetRom and Rose.

A simple AX.25 call would look like:

/usr/bin/call radio VK2DAY via VK2SUT

A simple NetRom call to a node with an alias of SUNBBS would look like:

/usr/bin/call netrom SUNBBS

A simple Rose call to HEARD at node 5050882960 would look like:

/usr/bin/call rose HEARD 5050882960

Note: you must tell call which port you wish to make the call on, as the same destination node might be reachable on any of the ports you have configured.

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man page in /usr/man for more information.

13. Configuring Linux to accept Packet connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25, NetRom or Rose connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". People are developing neat little applications that may be used to provide services to callers, a simple example is the pms program included in the AX25 utilities, a more complex example is the node program also included in the AX25 utilities. Alternatively you

might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

The ax25d program is similar to the inetd program commonly used to accept incoming TCP/IP connections on unix machines. It sits and listens for incoming connections, when it detects one it goes away and checks a configuration file to determine what program to run and connect to that connection. Since this the standard tool for accepting incoming AX.25, NetRom and Rose connections I'll describe how to configure it.

13.1. Creating the /etc/ax25/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25, NetRom and Rose connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The general format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[port_name] || <port_name> || {port_name}
<peer1> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
parameters window T1 T2 T3 idle N2 <mode>
<peer3> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.

<port_name>
is the name of the AX.25, NetRom or Rose port as specified in the /etc/ax25/axports, /etc/ax25/nrports and /etc/ax25/rsports files. The name of the port is surrounded by the `[]' brackets if it is an AX.25 port, the `<>' brackets if it is a NetRom port, or the `{}' brackets if it is a Rose port. There is an alternate form for this field, and that is use prefix the port name with `callsign/ssid via' to indicate that you wish accept calls to the callsign/ssid via this interface. The example should more clearly illustrate this.

<peer>
is the callsign of the peer node that this particular configuration applies to. If you don't specify an SSID here then

any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software will disconnect the session in 1 second units.

idle
is the idle timer value in seconds.

N2 is the number of consecutive retransmissions that will occur before the connection is closed.

<mode>
provides a mechanism for determining certain types of general permissions. The modes are enabled or disabled by supplying a combination of characters, each representing a permission. The characters may be in either upper or lower case and must be in a single block with no spaces.

u/U
UTMP - currently unsupported.

v/V
Validate call - currently unsupported.

q/Q
Quiet - Don't log connection

n/N
check NetRom Neighbour - currently unsupported.

d/D
Disallow Digipeaters - Connections must be direct, not digipeated.

l/L
Lockout - Don't allow connection.

*/0
marker - place marker, no mode set.

<uid>
is the userid that the program to be run to support the connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments

specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it
is run. You pass useful information into these arguments by use
of the following tokens:

%d Name of the port the connection was received on.

%U AX.25 callsign of the connected party without the SSID, in
uppercase.

%u AX.25 callsign of the connected party without the SSID, in
lowercase.

%S AX.25 callsign of the connected party with the SSID, in
uppercase.

%s AX.25 callsign of the connected party with the SSID, in
lowercase.

%P AX.25 callsign of the remote node that the connection came in
from without the SSID, in uppercase.

%p AX.25 callsign of the remote node that the connection came in
from without the SSID, in lowercase.

%R AX.25 callsign of the remote node that the connection came in
from with the SSID, in uppercase.
%r AX.25 callsign of the remote node that the connection came in
from with the SSID, in lowercase.

You need one section in the above format for each AX.25, NetRom or
Rose interface you want to accept incoming AX.25, NetRom or Rose
connections on.

There are two special lines in the paragraph, one starts with the
string `parameters' and the other starts with the string `default'
(yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a
catch-all, so that any incoming connection on the <interface_call>
interface that doesn't have a specific rule will match the `default'
rule. If you don't have a `default' rule, then any connections not
matching any specific rule will be disconnected immediately without
notice.

The `parameters' line is a little more subtle, and here is the trap I
mentioned earlier. In any of the fields for any definition for a peer
you can use the `*' character to say `use the default value'. The

`parameters' line is what sets those default values. The kernel
software itself has some defaults which will be used if you don't
specify any using the `parameters' entry. The trap is that the these
defaults apply only to those rules below the `parameters' line not to
those above. You may have more than one `parameters' rule per
interface definition, and in this way you may create groups of default
configurations.

13.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 02/03/97
# This configuration uses the AX.25 port defined earlier.

# <peer> Win T1 T2 T3 idl N2 <mode> <uid> <exec> <argv[0]>[<args....>]

[VK2KTJ-0 via radio]
parameters 1 10 * * * * * root /usr/sbin/axspawn axspawn %u +
VK2XLZ * * * * * * *
VK2DAY * * * * * * *
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

[VK2KTJ-1 via radio]
default * * * * * 0 root /usr/sbin/node node

<netrom>
parameters 1 10 * * * * *
NOCALL * * * * * * L
default * * * * * * 0 root /usr/sbin/node node

{VK2KTJ-0 via rose}
parameters 1 10 * * * * * root /usr/sbin/axspawn axspawn %u +
VK2XLZ * * * * * * *
VK2DAY * * * * * * *
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

{VK2KTJ-1 via rose}
default * * * * * 0 root /usr/sbin/node node radio
```

This example says that anybody attempting to connect to the callsign
`VK2KTJ-0' heard on the AX.25 port called `radio' will have the
following rules applied:

Anyone whose callsign is set to `NOCALL' should be locked out, note
the use of mode `L'.

The parameters line changes two parameters from the kernel defaults
(Window and T1) and will run the /usr/sbin/axspawn program for them.
Any copies of /usr/sbin/axspawn run this way will appear as axspawn in
a ps listing for convenience. The next two lines provide definitions
for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection, and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

The next configuration accepts calls to VK2KTJ-1 via the radio port. It runs the node program for everybody that connects to it.

The next configuration is a NetRom configuration, note the use of the greater-then and less-than braces instead of the square brackets. These denote a NetRom configuration. This configuration is simpler, it simply says that anyone connecting to our NetRom port called `netrom' will have the node program run for them, unless they have a callsign of `NOCALL' in which case they will be locked out.

The last two configurations are for incoming Rose connections. The first for people who have placed calls to `vk2ktj-0' and the second for `VK2KTJ-1 at the our Rose node address. These work precisely the same way. Not the use of the curly braces to distinguish the port as a Rose port.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. The configuration file is explained fully in the ax25d.conf man page. A more detailed example is included in the ax25-utils package that might be useful to you too.

13.3. Starting ax25d

When you have the two configuration files completed you start ax25d with the command:

/usr/sbin/ax25d

When this is run people should be able to make AX.25 connections to your Linux machine. Remember to put the ax25d command in your rc files so that it is started automatically when you reboot each time.

14. Configuring the node software.

The node software was developed by Tomi Manninen <tomi.manninen@hut.fi> and was based on the original PMS program. It provides a fairly complete and flexible node capability that is easily configured. It allows users once they are connected to make Telnet, NetRom, Rose, and AX.25 connections out and to obtain various sorts of information such as Finger, Nodes and Heard lists etc. You can configure the node to execute any Linux command you wish fairly simply.

The node would normally be invoked from the ax25d program although it is also capable of being invoked from the TCP/IP inetd program to allow users to telnet to your machine and obtain access to it, or by

running it from the command line.

14.1. Creating the /etc/ax25/node.conf file.

The node.conf file is where the main configuration of the node takes
place. It is a simple text file and its format is as follows:

```
# /etc/ax25/node.conf
# configuration file for the node(8) program.
#
# Lines beginning with '#' are comments and are ignored.

# Hostname
# Specifies the hostname of the node machine
hostname radio.gw.vk2ktj.ampr.org

# Local Network
# allows you to specify what is consider 'local' for the
# purposes of permission checking using nodes.perms.
localnet 44.136.8.96/29

# Hide Ports
# If specified allows you to make ports invisible to users. The
# listed ports will not be listed by the (P)orts command.
hiddenports rose netrom

# Node Identification.
# this will appear in the node prompt
NodeId LINUX:VK2KTJ-9

# NetRom port
# This is the name of the netrom port that will be used for
# outgoing NetRom connections from the node.
NrPort netrom

# Node Idle Timeout
# Specifies the idle time for connections to this node in seconds.
idletimout 1800

# Connection Idle Timeout
# Specifies the idle timer for connections made via this node in
# seconds.
conntimeout 1800

# Reconnect

```

14.2. Creating the /etc/ax25/node.perms file.

The node allows you to assign permissions to users. These permissions allow you to determine which users should be allowed to make use of options such as the (T)elnet, and (C)onnect commands, for example, and which shouldn't. The node.perms file is where this information is stored and contains five key fields. For all fields an asterisk `*' character matches anything. This is useful for building default rules.

user
The first field is the callsign or user to which the permissions should apply. Any SSID value is ignored, so you should just place the base callsign here.

method
Each protocol or access method is also given permissions. For example you might allow users who have connected via AX.25 or NetRom to use the (C)onnect option, but prevent others, such as those who are telnet connected from a non-local node from having access to it. The second field therefore allows you to select which access method this permissions rule should apply to. The access methods allowed are:

```
method description
------ -----------------------------------------------------------
ampr User is telnet connected from an amprnet address (44.0.0.0)
ax25 User connected by AX.25
host User started node from command line
inet user is telnet connected from a non-loca, non-ampr address.
local User is telnet connected from a 'local' host
netrom User connected by NetRom
rose User connected by Rose
* User connected by any means.
```

port
For AX.25 users you can control permissions on a port by port basis too if you choose. This allows you to determine what AX.25 are allowed to do based on which of your ports they have connected to. The third field contains the port name if you are

using this facility. This is useful only for AX.25 connections.

password
You may optionally configure the node so that it prompts users
to enter a password when they connect. This might be useful to
help protect specially configured users who have high authority
levels. If the fourth field is set then its value will be the
password that will be accepted.

permissions
The permissions field is the final field in each entry in the
file. The permissions field is coded as a bit field, with each
facility having a bit value which if set allows the option to be
used and if not set prevents the facility being used. The list
of controllable facilities and their corresponding bit values
are:

value description
----- --
1 Login allowed.
2 AX25 (C)onnects allowed.
4 NetRom (C)onnects allowed.
8 (T)elnet to local hosts allowed.
16 (T)elnet to amprnet (44.0.0.0) hosts allowed.
32 (T)elnet to non-local, non-amprnet hosts allowed.
64 Hidden ports allowed for AX.25 (C)onnects.
128 Rose (C)onnects allowed.

To code the permissions value for a rule, simply take each of the
permissions you want that user to have and add their values
together. The resulting number is what you place in field five.

A sample nodes.perms might look like:

```
# /etc/ax25/node.perms
#
# The node operator is VK2KTJ, has a password of 'secret' and
# is allowed all permissions by all connection methods
vk2ktj * * secret 255

# The following users are banned from connecting
NOCALL * * * 0
PK232 * * * 0
PMS * * * 0

# INET users are banned from connecting.
* inet * * 0

# AX.25, NetRom, Local, Host and AMPR users may (C)onnect and (T)elnet
# to local and ampr hosts but not to other IP addresses.
* ax25 * * 159
* netrom * * 159
* local * * 159
```

```
* host * * 159
* ampr * * 159
```

14.3. Configuring node to run from ax25d

The node program would normally be run by the ax25d program. To do this you need to add appropriate rules to the /etc/ax25/ax25d.conf file. In my configuration I wanted users to have a choice of either connecting to the node or connecting to other services. ax25d allows you to do this by cleverly creating creating port aliases. For example, given the ax25d configuration presented above, I want to configure node so that all users who connect to VK2KTJ-1 are given the node. To do this I add the following to my /etc/ax25/ax25d.conf file:

```
[vk2ktj-1 via radio]
default * * * * * 0 root /usr/sbin/node node
```

This says that the Linux kernel code will answer any connection requests for the callsign `VK2KTJ-1' heard on the AX.25 port named `radio', and will cause the node program to be run.

14.4. Configuring node to run from inetd

If you want users to be able to telnet a port on your machine and obtain access to the node you can go this fairly easily. The first thing to decide is what port users should connect to. In this example I've arbitrarily chosen port 4000, though Tomi gives details on how you could replace the normal telnet daemon with the node in his documentation.

You need to modify two files.

To /etc/services you should add:

```
node 3694/tcp #OH2BNS's node software
```

and to /etc/inetd.conf you should add:

```
node stream tcp nowait root /usr/sbin/node node
```

When this is done, and you have restarted the inetd program any user who telnet connects to port 3694 of your machine will be prompted to login and if configured, their password and then they will be con&#65533;nected to the node.

15. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be logged in to your machine. It may be invoked from the ax25d program as described above in a manner similar to the node program. To allow a user to log in to your machine you should add a line similar to the following into your /etc/ax25/ax25d.conf file:

```
default * * * * * 1 root /usr/sbin/axspawn axspawn %u
```

If the line ends in the + character then the connecting user must hit
return before they will be allowed to login. The default is to not
wait. Any individual host configurations that follow this line will
have the axspawn program run when they connect. When axspawn is run it
first checks that the command line argument it is supplied is a legal
callsign, strips the SSID, then it checks that /etc/passwd file to see
if that user has an account configured. If there is an account, and
the password is either "" (null) or + then the user is logged in, if
there is anything in the password field the user is prompted to enter
a password. If there is not an existing account in the /etc/passwd
file then axspawn may be configured to automatically create one.

15.1. Creating the /etc/ax25/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the
/etc/ax25/axspawn.conf file. This file is formatted as follows:

```
# /etc/ax25/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

```
# indicates a comment.
```

```
create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.
```

guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.

16. Configuring the pms

The pms program is an implementation of a simple personal message
system. It was originally written by Alan Cox. Dave Brown, N2RJT,
<dcb@vectorbd.com> has taken on further development of it. At present
it is still very simple, supporting only the ability to send mail to
the owner of the system and to obtain some limited system information
but Dave is working to expand its capability to make it more useful.

After that is done there are a couple of simple files that you should
create that give users some information about the system and then you
need to add appropriate entries into the ax25d.conf file so that
connected users are presented with the PMS.

16.1. Create the /etc/ax25/pms.motd file.

The /etc/ax25/pms.motd file contains the `message of the day' that
users will be presented with after they connect and receive the usual
BBS id header. The file is a simple text file, any text you include in
this file will be sent to users.

16.2. Create the /etc/ax25/pms.info file.

The /etc/ax25/pms.info file is also a simple text file in which you
would put more detailed information about your station or
configuration. This file is presented to users in response to their

issuing of the Info command from the PMS> prompt.

16.3. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine. This is described in a section of its own.

16.4. Add the PMS to the /etc/ax25/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

default 1 10 5 100 5 0 root /usr/sbin/pms pms -a -o vk2ktj

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.

16.5. Test the PMS.

To test the PMS, you can try the following command from the command line:

/usr/sbin/pms -u vk2ktj -o vk2ktj

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

17. Configuring the user_call programs.

The `user_call' programs are really called: ax25_call and netrom_call. They are very simple programs designed to be called from ax25d to automate network connections to remote hosts. They may of course be called from a number of other places such as shell scripts or other daemons such as the node program.

They are like a very simple call program. They don't do any meddling with the data at all, so the end of line handling you'll have to worry about yourself.

Let's start with an example of how you might use them. Imagine you have a small network at home and that you have one linux machine

acting as your Linux radio gateway and another machine, lets say a BPQ node connected to it via an ethernet connection.

Normally if you wanted radio users to be able to connect to the BPQ node they would either have to digipeat through your linux node, or connect to the node program on your linux node and then connect from it. The ax25_call program can simplify this if it is called from the ax25d program.

Imagine the BPQ node has the callsign VK2KTJ-9 and that the linux machine has the AX.25/ethernet port named `bpq'. Let us also imagine the Linux gateway machine has a radio port called `radio'.

An entry in the /etc/ax25/ax25d.conf that looked like:

```
[VK2KTJ-1 via radio]
default * * * * * * *
root /usr/sbin/ax25_call ax25_call bpq %u vk2ktj-9
```

would enable users to connect direct to `VK2KTJ-1' which would actu&#65533;
ally be the Linux ax25d daemon and then be automatically switched to
an AX.25 connection to `VK2KTJ-9' via the `bpq' interface.

There are all sorts of other possible configurations that you might try. The `netrom_call' and `rose_call' utilities work in similar ways. One amateur has used this utility to make connections to a remote BBS easier. Normally the users would have to manually enter a long connection string to make the call so he created an entry that made the BBS appear as though it were on the local network by having his ax25d proxy the connection to the remote machine.

18. Configuring the Rose Uplink and Downlink commands

If you are familiar with the ROM based Rose implementation you will be familiar with the method by which AX.25 users make calls across a Rose network. If a users local Rose node has the callsign VK2KTJ-5 and the AX.25 user wants to connect to VK5XXX at remote Rose node 5050882960 then they would issue the command:

```
c vk5xxx v vk2ktj-5 5050 882960
```

At the remote node, VK5XXX would see an incoming connection with the local AX.25 users callsign and being digipeated via the remote Rose nodes callsign.

The Linux Rose implementation does not support this capability in the kernel, but there are two application programs called rsuplnk and rsdwnlnk which perform this function.

18.1. Configuring a Rose downlink

To configure your Linux machine to accept a Rose connection and establish an AX.25 connection to any destination callsign that is not being listened for on your machine you need to add an entry to your

/etc/ax25/ax25d.conf file. Normally you would configure this entry to be the default behaviour for incoming Rose connections. For example you might have Rose listeners operating for destinations like NODE-0 or HEARD-0 that you wish to handle locally, but for all other destination calls you may want to pass them to the rsdwnlink command and assume they are AX.25 users.

A typical configuration would look like:

```
#
{* via rose}
NOCALL * * * * * * L
default * * * * * * - root /usr/sbin/rsdwnlnk rsdwnlnk 4800 vk2ktj-5
#
```

With this configuration any user who established a Rose connection to your Linux nodes address with a destination call of something that you were not specifically listening for would be converted into an AX.25 connection on the AX.25 port named 4800 with a digipeater path of VK2KTJ-5.

18.2. Configuring a Rose uplink

To configure your Linux machine to accept AX.25 connections in the same way that a ROM Rose node would you must add an entry into your /etc/ax25/ax25d.conf file that looks similar to the following:

```
#
[VK2KTJ-5* via 4800]
NOCALL * * * * * * L
default * * * * * * - root /usr/sbin/rsuplnk rsuplnk rose
#
```

Note the special syntax for the local callsign. The `*' character indicates that the application should be invoked if the callsign is heard in the digipeater path of a connection.

This configuration would allow an AX.25 user to establish Rose calls using the example connect sequence presented in the introduction. Anybody attempting to digipeat via VK2KTJ-5 on the AX.25 port named 4800 would be handled by the rsuplnk command.

19. Associating AX.25 callsigns with Linux users.

There are a number of situations where it is highly desirable to associate a callsign with a linux user account. One example might be where a number of amateur radio operators share the same linux machine and wish to use their own callsign when making calls. Another is the case of PMS users wanting to talk to a particular user on your machine.

The AX.25 software provides a means of managing this association of linux user account names with callsigns. We've mentioned it once already in the PMS section, but I'm spelling it out here to be sure

you don't miss it.

You make the association with the axparms command. An example looks like:

axparms -assoc vk2ktj terry

This command associates that AX.25 callsign vk2ktj with the user terry on the machine. So, for example, any mail for vk2ktj on the pms will be sent to Linux account terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

Note you should never associate a callsign with the root account as this can cause configuration problems in other programs.

20. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users.

20.1. Linking NOS and Linux using a pipe device

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program,

as the Linux kernel starts first and the master end of the pipe must
be opened first. You must also remember that your Linux kernel must
have a different IP address to your NOS, so you will need to allocate
a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to
create the slip link from your linux kernel you can use commands
similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 netmask 255.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88
and the NOS program is using IP address 44.70.248.67. The route
command in the last line simply tells your linux kernel to route all
datagrams for the amprnet via the slip link created by the slattach
command. Normally you would put these commands into your
/etc/rc.d/rc.inet2 file after all your other network configuration is
complete so that the slip link is created automatically when you
reboot. Note: there is no advantage in using cslip instead of slip as
it actually reduces performance because the link is only a virtual one
and occurs fast enough that having to compress the headers first takes
longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end
of the pipe device pair to your linux kernel, and a route to it to
make it work. When you have started NOS you should be able to ping and
telnet to your NOS from your Linux machine and vice versa. If not,
double check that you have made no mistakes especially that you have
the addresses configured properly and have the pipe devices around the
right way.

21. The /proc/ file system entries.

The /proc filesystem contains a number of files specifically related
to the AX25 and NetRom kernel software. These files are normally used
by the AX52 utilities, but they are plainly formatted so you may be
interested in reading them. The format is fairly easily understood so
I don't think much explanation will be necessary.

/proc/net/arp
contains the list of Address Resolution Protocol mappings of IP
addresses to MAC layer protocol addresses. These can can AX.25,
ethernet or some other MAC layer protocol.

/proc/net/ax25
contains a list of AX.25 sockets opened. These might be
listening for a connection, or active sessions.

/proc/net/ax25_bpqether
contains the AX25 over ethernet BPQ style callsign mappings.

/proc/net/ax25_calls
contains the linux userid to callsign mappings set my the
axparms -assoc command.

/proc/net/ax25_route
contains AX.25 digipeater path information.

/proc/net/nr
contains a list of NetRom sockets opened. These might be
listening for a connection, or active sessions.

/proc/net/nr_neigh
contains information about the NetRom neighbours known to the
NetRom software.

/proc/net/nr_nodes
contains information about the NetRom nodes known to the NetRom
software.

/proc/net/rose
contains a list of Rose sockets opened. These might be listening
for a connection, or active sessions.

/proc/net/rose_nodes
contains a mapping of Rose destinations to Rose neighbours.

/proc/net/rose_neigh
contains a list of known Rose neighbours.

/proc/net/rose_routes
contains a list of all established Rose connections.

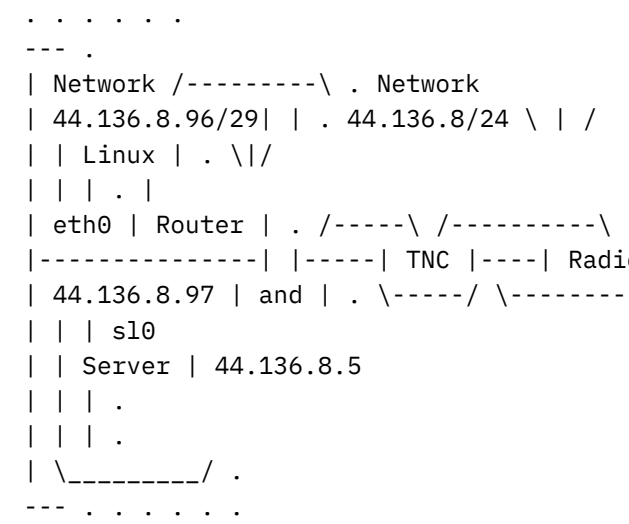
22. Some sample configurations.

Following are examples of the most common types of configurations.
These are guides only as there are as many ways of configuring your
network as there are networks to configure, but they may give you a
start.

22.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to
connect the machines on that network to your local radio LAN. This is
the type of configuration I use at home. I arranged to have a suitable
block of addresses allocated to me that I could capture in a single
route for convenience and I use these on my Ethernet LAN. Your local
IP coordinator will assist you in doing this if you want to try it as
well. The addresses for the Ethernet LAN form a subset of the radio
LAN addresses. The following configuration is the actual one for my

linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."

echo -n " AX.25: "
kissattach -i 44.136.8.5 -m 512 /dev/ttyS1 4800
ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.8.255
route add -host 44.136.8.5 sl0
route add -net 44.136.8.0 window 1024 sl0

echo -n " Netrom: "
nrattach -i 44.136.8.5 netrom

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end
```

```
/etc/ax25/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz

/etc/ax25/nrports

# name callsign alias paclen description
netrom VK2KTJ-9 LINUX 235 Linux Switch Port

/etc/ax25/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 netmask 255.0.0.0 \
gw 44.136.8.97 window 512 mss 512 eth0

The use of the mss and window parameters means that I can get optimum
performance from both local Ethernet and radio based connections.
```

• I also run my smail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

```

If his Mac has a 1.4 "superdrive" and O/S system 7 or later he can read a PC formatted disk. He will have to read his manual (new concept, eh?)

New OS versions 7.5 and later read PC floppies it is part of the Operating System software (OS) with earlier OS's 7.0, 7.1 he will have to use PC exchange.

He could also go to a Mac specialty store they would problibly give him SCSI probe if he provided them a floppy.

To really answer your question better, you need to provide us with the Model of his machine, Mac IIci, etc. and what System software (OS) version he has, to find this click on the Apple in the upper left corner, with NO applications running select "about this computer" this will give software version, and ram amounts free/used.

Email me if you need more help, rotnappl@ix.netcom.com

All one has to do is to be able to read the rules and comply by operating your equipment properly. The same requirements stand for CB and personal radio services. The theory tests don't prove anything other than you can memorize a Gordon West book before you take the test. You reasoning and logic seems to have two faces depending if you are bad mouthing the code or praising the merits of technical testing. If you want to be realistic about it, most people do not have the equipment to work on today's highly integrated push button surface mount constructed rigs. In reality your technical standards are out dated and old fashioned.

No they are prohibited by their lack of effort to pass the required tests, period. There are thousands of general and above classed hams that prove your logic flawed.

You couldn't pass it because you waited several months to take the
test?? The above real smells fishy. You obviously don't want to upgrade
that bad, period. I didn't like a lot of the theory and operating BS I
had to study to get my General class ticket. I studied it, passed it and
forgot what I didn't need. I guess i could have been like you and just
moaned about it and never upgraded but I chose to meet the challenge
because I wanted the ticket. You just seem to want it your way
regardless of anything.

Nobody says you have to like it. I don't care for slow scan, rtty,
packet and the like. They are boring and tedious. should we remove any
mention of them too in the testing? Why not, "I" find them boring.

> In other words, I heard "the" "rig" and many commonly-used words

I don't buy it. If you were at that level of CW copy you could study 10
minutes a day and pass the test in a week.

> > If posted one less message and spent that time on

> with the remainder about equally divided between "rarely" and

> "never." (ARRL's numbers, not mine)

So you will agree with any fact or figure that the ARRL publishes and treat it as the gospel truth? Correct?

Bottom line for me Carl. I hated the code, I hated most of the theory and especially hated the rules and regulations that one had to learn to pass the General test. I have the same feeling now as i study for my Advanced ticket. It is boring and tedious but I really don't care. I have enjoyed the radio hobby since I was a kid and will do what it takes to get more privileges. They are such minor obstacles. If one doesn't like it he can always get a CB or take up knitting. :-)

Thanks for being civilized in your response.

Hmmmm, K7K (a 1x1 special-event station call) is currently operating
from Kure Atoll (in the Northern Hawaiian island chain). Kure,
being part of the City and County of Honolulu, is within our
national border, so I guess your W3W will be the nation's second
1x1 callsign holder...

The above boundries might make more sense (and be easier to remember)
if you think of them in terms of wavelength:

...
VLF 100km - 10km
LF 10km - 1km
MF 1000m - 100m
HF 100m - 10m
VHF 10m - 1m
UHF 1m - 100cm
...

Help.

I have just been informed by my unsympathetic ISP that I should not fudge my e-mail return address as an Anti-SPAM tactic because it's contrary to some Internet standards (RFC 821, according to my ISP).

Does anyone have a way to do it that isn't going to get me crossways with my ISP?

There is an interesting article in the Wall Street Journal 10/1/97 page B1

"The Internet Generation Taps Into Morse Code" by Anna Wilde Mathews Staff reporter

It's an interesting article on the history and current use of code, seems some believe there is a small renaissance underway.

I seem to remember comming across a shareware program that could use a soundblaster soundcard as a dsp audio filter. I have searched the internet and have not come across anything like that.

Does anyone know about such a software program?

Thanks in advance.

- --- BEGIN Linux AX25 HOWTO part 3/3 ---
```

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

```
22.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for TCP/IP encapsulated gateways
around the world. The new tunnel driver supports multiple encapsulated
routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.

. . . . . .
--- .
| Network /---------\ . Network
| 154.27.3/24 | | . 44.136.16/24 \ | /
| | Linux | . \|/
| | | . |
| eth0 | IPIP | . /-----\ /----------\ |
---|---------------| |-----| TNC |----| Radio |---/
| 154.27.3.20 | Gateway | . \-----/ \----------/
| | | sl0
| | | 44.136.16.1
| | | .
| | | .
| \_________/ .
--- . . . . . .

The configuration files of interest are:

# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
```

```
echo "/etc/rc.net"
echo " Configuring:"
#
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
echo " done."
#
echo -n " AX.25: "
kissattach -i 44.136.16.1 -m 512 /dev/ttyS1 4800
/sbin/ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.16.255
/sbin/route add -host 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add -net 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add -net 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add -net 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

/etc/ax25/axports

```
# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

• The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

• You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

• The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to a separate file and read in using the bash source /etc/ipip.routes command (assuming you called the file with the routing commands /etc/ipip.routes) as illustrated. The source file must be in the NOS route command format.

• Note the use of the window argument on the route command. Setting this parameter to an appropriate value improves the performance of your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"

23. AX.25, NetRom, Rose network programming.

Probably the biggest advantage of using the kernel based implementations of the amateur packet radio protocols is the ease with which you can develop applications and programs to use them.

While the subject of Unix Network Programming is outside the scope of this document I will describe the elementary details of how you can make use of the AX.25, NetRom and Rose protocols within your software.

23.1. The address families.

Network programming for AX.25, NetRom and Rose is quite similar to programming for TCP/IP under Linux. The major differences being the address families used, and the address structures that need to be mangled into place.

The address family names for AX.25, NetRom and Rose are AF_AX25, AF_NETROM and AF_ROSE respectively.

23.2. The header files.

You must always include the `ax25.h' header file, and also the `netrom.h' or `rose.h' header files if you are dealing with those protocols. Simple top level skeletons would look something like the following:

For AX.25:

```
#include <ax25.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
sockaddr.fsa_ax25.sax25_family = AF_AX25
```

For NetRom:

```
#include <ax25.h>
#include <netrom.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
sockaddr.fsa_ax25.sax25_family = AF_NETROM;
```

For Rose:

```
#include <ax25.h>
#include <rose.h>
int s, addrlen = sizeof(struct sockaddr_rose);
struct sockaddr_rose sockaddr;
sockaddr.srose_family = AF_ROSE;
```

23.3. Callsign mangling and examples.

There are routines within the lib/ax25.a library built in the AX25 utilities package that manage the callsign conversions for you. You can write your own of course if you wish.

The user_call utilities are excellent examples from which to work. The source code for them is included in the AX25 utilities package. If you spend a little time working with those you will soon see that 90 percent of the work is involved in just getting ready to open the socket. Actually making the connection is easy, the preparation takes time.

The example are simple enough to not be very confusing. If you have any questions, you should feel to direct them to the linux-hams mailing list and someone there will be sure to help you.

24. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio TCP/IP discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

The linux-hams mailing list is archived at:

98. Kids and CW - not boring

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-02 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <611njrsl1@w3eax.umd.edu>
Source record: 189449

In the continuing saga of "the kids on my street," in which I'm introducing them (and a few parents) to Ham Radio via a class being taught in my basement, I was outside today, listening to DX on 20 CW.

The sister (age 9) of two of the kids who are taking the class (ages 12 & 14) came over and said,

"My brothers aren't going to let me take the class because they don't want me getting ahead of them. What are you listening to?"

Anyway, I explained what Morse code was, and how it was sent and received. I went over to the phone band and we listened for a while, and she then said, "Let's go back to the other stuff." Really.

After a few minutes, she said, "teach me how to understand what they're saying. Let's talk to them."

We started with C, E, T, A, and N. She called over her friend (also 9) and they basically pushed me out of the driver's seat of the car so they could get hold of the paddles. The first word sent was CAT.

For those of you who say, "It's so hard to learn Morse,"

within 20 minutes, they had 13 letters down solidly, and not only were they receiving what I sent, but were sending ME words. Within 20 minutes, we were listening to 25 wpm code and they were picking out letters they recognized. Within 45 minutes, we were up to 18 letters, and the older kids (her brothers and a friend) came over.

I had a QSO with DJ7AA, and we went and grabbed the map. They looked in the DXCC list for "DJ," and found that Germany was "DA-DL. WOW! Germany!"

After realizing, grudgingly, that their little sister was REALLY very good at this, they started taking instruction FROM HER, not from me!

So anyway, 18 letters down and 8 to go. They asked me if they could borrow my radio (for the oscillator) but it's permanently mounted in the car. I offered them the use of a keyer w/speaker, plus a set of paddles,

and they very readily accepted. 3 kids in the same house
with a code practice oscillator...hate to be their mom...

Kids don't KNOW what Morse Code is. Some will undoubtedly
dislike it, but some kids hate ice cream, too.

Wanna see something amazing? Morse is like a "secret code"
to these kids. Have you ever seen a 10 year old learn
something he/she WANTED to learn? It's truly amazing,
and I can't believe I ever absorbed anything like they do.

> 73 from don ka9qjg

a kenwood tech told you that? guess what...kenwood is in the market to

sell radios. the problem that you are probably experencing is an

unlocked pll circuit. this is caused a failure in vco 5. kenwood

applied a glue to this vco circuit. this glue contaminates in time

making the vco unstable. the fix is to remove the glue from the

components and the circuit board completly. before i fixed both of my

kenwood ts440s radios, i put a spectrum analizer at the output of this

vco. sure enough, the frequency slid off the center and dropped out. i

did this fix 2 years ago. both rigs are working fine.

As for your observation to the "modern"electronic junk that is floating out there you are RIGHT
on the fact that the late 60 and early 70's TV recevers are some of the best out there. I have a
RCA New Vista Color 23" recever in the entertainment system that uses mostly tubes. The only
transister that I can find in there is the UHF tuner mixer and osc. That thing looks BETTER than
my later model Sony Trinitron! So much for fancy widgets! I have to say that I like tubes better
(lets try a PENTIUM with a pile of 12AX7's) than transisters. As for my radios....Philco 48-1264
fully restored and the RCA with a NEW picture tube!
Keep'em glowing! 73's to the group

Jim,
I noticed that the batch of Vanity Callsigns the FCC released today
have application dates of 8/6, 8/7 and 8/15/97. This is the first time
I've seen the 8/7/97 application date being worked on. (8/15/97
application dates appeared on assignments when the FCC issued the
first batch of gate 3 applications so it is not new to his release of
vanity callsigns.)

Source record: 189551

My friend is having problems with his (approx) 5 year old Mac. It no longer sees his 80Mb hard drive. He asked me to find him a copy of SCSI-Probe, which I did, but now I have it on an IBM formatted diskette, which isn't doing him any good.

How can I transfer that program to a disk that the Mac will be able to read?

I downloaded scsi-probe-43.hqx, and I don't even know if that is an executable in the Mac world, or an archive. If it's an archive, will my friend be able to unarchive it, without access to his hard drive?

Believe it or not, he's even more clueless (less clueful?) that *I* am, about his computer. I'd really appreciate any advice.

Thanks!
Eric

Source record: 189553
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc

Hello,

my neighbour tells me that he can hear my 80m and 40m SSB transmissions on his TV coax downlead, when the television set is switched on stand-by. I have not come across this problem before, and am puzzled. As I haven't been to his house yet, I can't confirm his diagnosis is correct, but before I go I would like to ask whether any amateurs have encountered this problem and know what it might be.

My guess is that either he is hearing my transmissions from the audio amplifier part of the TV, even though it is only on standby, or else that the length of his downlead is a multiple of the frequency I'm transmitting on. But even then, I haven't heard of a cable acting as a loudspeaker.

Thanks for any advice, in anticipation!

>> >said "never" or "rarely" ...
>>

Quoted directly from the ARRL survey...

Of course, what percentage of those surveyed use SSB regularly?

My guess - about 25%.

25% using SSB regularly, 27% using CW regularly, 5% of them counting
for both, for a total of 47% of those surveyed who are actually
ACTIVE operators.

Seems to me...I wonder...

Another who doesn't get it.

Said attitude revealed in the statement "NO CODE=NO HAM" equals
myopic PMS[tm] Paradigm #2. Said attitude also equates to out-dated,
archaic, dense, close-minded (if not narrow-minded), emotionalized,
backward-thinking, vision-blindered olde fartism. =0)

Boiled down, the key phrase espoused ("NO CODE=NO HAM") once again
indicates the PMS[tm] crowd doesn't listen to the discussion or read
the literature (or can't), and is STILL failing to understand what is
rudimentally basic and simple: Removal of the code-TEST requirement
is necessary, irrefutable, non-obfuscatable, and long overdue. Long
live OOK Morse, otherwise!

Doubt this? DejaNews will set the minds of even the most minutely
infinitesimally intelligent doubters to rest.

But never mind, said the hind, "the more things change, the more
they stay the same." IOW, this is but the beginning of another great
cycle in the never-ending journey of the great long-in-tooth gear
wheel in the legendary code-TEST / no-code-TEST debate. This
magnificent circle, carrying the battle of tradition, revision and
what goes around comes around along the rocky path of time wasted,
opponents seemingly forever locked out of sync, is ever destined to
continue on its travels, until those who steadfastly and resolutely
refuse to, or cannot, acknowledge the inevitability of the demise of
the no-code-TEST ultimately see the forest DESPITE the trees.

[Raise those shields, faithful Obadiah: I fear the heat is about to commence. Of course, I could be wrong.]

[Gee Ma, did I say all THAT?] =0)

Jim,

I turned off the computer for the day es then realized that the batch
of calls the FCC issued on 10/1/97 had applications dated 8/22/97.
What this means to me is that the FCC is clearing out the applications
that are easy to assign new calls to and then going back and working
on the more difficult day one/day two/day three applications.

I was pleased to see the 8/22/97 application date on a couple of the
newly assigned vanity callsigns. I have a friend that applied for a
gate 2 application on 8/26/97. Maybe he will have his application
worked within the next week or two assuming that everything is okay
with it and the computer can do the assignment.

>wonder. Personally I wouldn't take such a picture as a threat but
>that's me not Carl.

If Carl had any real brains, he would have examined the "originating
IP" line in the header of the message he received. The last I knew,
e-mail services like Rocketmail put an originating IP header in the
message so even though the message might be "anonymous", you can
still trace it back to the IP, hence the site, the message really
originated at.

Despite his proclaimations otherwise, Carl just isn't that smart.

Sending Carl hate-mail isn't my style. It serves no purpose. Public
ridicule of Carl _is_ my style, and is more effective. But, if I was
going to send Carl hate mail, I'd do it from my own site.

>Actually I don't think much of your opinions or ethics but as you say
>that's too bad.

That's okay, Jerry, I've never thought much about you either. Maybe
about 5 seconds, tops.

There really isn't much to it.

Keep the power below 35 watts, & a fan on the heatsink is a
good idea.

Two sites that have Mitrek info are
http://www.sedan.org
http://www.seits.org

Well, it certainly wouldn't be the first time that Stevenson has openly
fabricated things and lied in this newsgroup forum. All one has to do
is look at how he publically posted messages from a former employer,
and then claimed he never did, and how it was somehow "Microsoft's fault"
because of "buggy software". (Evidence supporting this assertion I'm
making is publically available via the DejaNews archives, despite
Stevenson's claim that I'm "making it up".)

All:

Several Hams have requested info. about SWAN service and Nets, here it is as of last check in May of 1996.

Boddicker Electric Supply 301-694-6888 7311-V Grove Road Frederick, MD 21704

Stu Morrison K4BOV is the contact.

Also, SWAN Nets:

Sun. 14.250 5PM EST WA9AZK UT
Wed. 14.251 7PM EST K4BOV MD/NY
Thu. 7.235 2PM EST K4BOV MD/NY
Sun. 14.293 2PM EST WB0SNF NE

I'd love to hear if any of this has changed, and how your Net contact and/or Boddicker experience goes.

* IN BRIEF: This weekend on the radio;
Corrections; Vanity update; Update--special
event to mark Sputnik launch anniversary;
JOTA to mark 40 years; QST Cover
Plaque winner; AMSAT board election results

WELL-KNOWN AUTHOR, FORMER LEAGUE STAFFER DOUG DeMAW, W1FB, SK

Acclaimed ham radio icon Milton F. "Doug" DeMaw, W1FB, died September 28. He was 71. One of the most widely published technical writers in Amateur Radio, DeMaw was diagnosed with leukemia earlier this year and had been in failing health in recent weeks.

DeMaw was first licensed in 1950 as W8HHS. An electrical engineer, he was a member of the ARRL Headquarters staff for 18 years--from 1965 to 1983--and served as Technical Department Manager and Senior Technical Editor from 1970 to 1983. During his tenure at HQ, DeMaw served as editor of The ARRL Handbook. In 1970, he engineered the shift in emphasis toward solid-state design in QST and the Handbook. He has hundreds of articles in QST and other publications to his credit. DeMaw also was founder and publisher of VHFer Magazine. (His wife, Jean, W1CKK, also worked on the Headquarters staff.) DeMaw was a life member of the ARRL and a senior member of the IEEE.

After retiring to the family farm in Luther, Michigan, he was elected chairman of the Lake County Board of Commissioners and continued to write books and articles. He also tried his hand in the Amateur Radio business as

proprietor of Oak Hills Research. Among his other books, DeMaw wrote W1FB's Design Notebook, W1FB's QRP Notebook, W1FB's Antenna Notebook, and The ARRL Electronics Data Book, which remain popular. In recent years, DeMaw also penned regular columns for CQ magazine and Monitoring Times.

A former ARRL colleague, Membership Services Manager Chuck Hutchinson, K8CH, counted DeMaw among his friends. "Doug loved to experiment with circuits and antennas. He also loved to encourage others to try their hand at building," he recalled. Hutchinson said DeMaw not only wrote prolifically about ham radio but also about gardening, another of his avocations. "He was an avid gardener and cook," he said. DeMaw also was an outdoorsman and hunter. "He loved to hunt with bow and rifle--both modern and muzzle loader. He was very good at throwing a knife or hatchet," Hutchinson said.

HQ staff member Paul Pagel, N1FB, also was one DeMaw's colleagues during his days at ARRL HQ. "Amateur Radio benefited greatly from his work," Pagel said. "He was a multifaceted man. I doubt there was anything he couldn't do if he set his mind to it." Retired HQ staffer Jerry Hall, K1TD, who also worked with DeMaw during his years at the League, called DeMaw a writer of "uncanny" ability. "Doug could write it once, and it was done," he recalled.

Another former HQ staffer, Gerry Hull, W1VE/VE1RM, called DeMaw an important career influence. "He was always there when I was stuck with a tough technical challenge," he said.

Jim Jones, K5GSH, of Albuquerque, New Mexico, called DeMaw's death "a personal loss." Jones recalled how, as a young ham, he had problems getting one of his first transmitters to work. He called the ARRL and DeMaw talked him through the circuit and helped him to uncover the problem. "I remember thanking Mr. DeMaw. He plainly told me that hams are friendly folk and always share what they know."

Forrest Plumstead, WB5HQO, of Ft Richardson, Arkansas, expressed similar sentiments. "He, more than anyone else I can think of, encouraged me to build my own equipment," he said. "The world of ham radio has lost one of its giants."

Survivors include DeMaw's wife, Jean, and a son, David, N8HLE, a technical writer who lives in Connecticut. Memorial contributions may be made to Luther Historical Museum, c/o Luther State Bank, Box 39, Luther, MI 49656.

FCC ANNOUNCES ELECTRONIC RENEWAL FORM 900

The FCC's Wireless Telecommunications Bureau (WTB) has consolidated eight renewal forms into one form. Form 900, Application for Electronic Renewal of Wireless Radio Services Authorizations, is an interim measure to permit all WTB licensees, including hams, to renew their licenses electronically.

This form is only for renewals, not for license modifications. You can only enter changes (eg, name, address) using Form 900 as a part of the process of renewing your license. You can only use Form 900 if the expiration date on your license falls within the renewal window (within 120 days of expiration). You cannot use Form 900 to renew an expired license. Form 900

may only be submitted electronically. No Form 900 paper applications will be accepted. When filing Form 900, you will be required to enter a Social Security Number for a taxpayer ID number.

Access Form 900 on the WTB Electronic Commerce page, http://www.fcc.gov/wtb/electcom.html (click on Production Page for Electronic Commerce Applications to access the Form 900). Click on any item number for filing instructions. Once you have filed the form, clicking on Electronic Renewal Query lets you view or print the information submitted.

Once you have successfully submitted Form 900, it is important to click on the Continue button to obtain the fee information pertaining to your filing. The screen will prompt you with a Fee Remittance Advice, Form 159. The form will indicate that there is no charge to renew an Amateur Radio license (except for vanity call sign holders, who won't have to renew for several more years yet).

Form 900 updates will be batch processed at night. They are not instantaneous.

Send comments about the FCC Form 900 to sreed@fcc.gov. For technical assistance, call the FCC Technical Support Group at 202-414-1250. Other general information may be obtained from the FCC's National Call Center at 888-225-5322 (CALL-FCC).--FCC

ARRL SEEKS CHANGES TO CW WAIVER RULES

The ARRL has asked the FCC to change the way Morse code exam exemptions for severely handicapped applicants are handled. The League wants to change the procedural requirements in Part 97 that must be met, prior to granting examination credit.

Under the League's proposed changes, a candidate at least would have to attempt the CW test--with any and all necessary accommodations--before being granted an exam waiver based on a physician's certification. Also, Volunteer Examiner Coordinators (VECs) would be entitled to request medical information pertinent to an applicant's handicap from the certifying physician. VECs also would be required to have this information on file before the application is forwarded to the FCC for processing.

In its petition filed September 23, the League said the two "rather minor changes" are needed to restrict the waiver process to use by severely handicapped individuals "for whom the process was intended in the first place and who deserve the substantive accommodation." The League also said the changes would "stem abuses" of the waiver system without putting unreasonable burdens on examinees.

The CW waiver system has been in effect for seven years. The League says that experience has shown that many applicants without severe handicaps "have abused the process" by obtaining physicians' certifications of inability to pass the telegraphy examination. At present, 8% of those applying through the ARRL-VEC have requested a medical exemption from the higher-speed code requirement. Another large VEC reports similar experience.

The League cited "a growing suspicion" in the ham community of anyone who has upgraded by using the waiver route. But the League said this is "completely unfair to those who require and deserve the exemption because they cannot be accommodated by procedural means."

FCC rules requires volunteer examiners to exercise broad latitude in administering CW exams to accommodate handicapped applicants. Measures include using a flashing light or vibrating surface for hearing-impaired applicants, pausing in sending after sentences, phrases, words or even characters to allow an examinee time to interpret, or even substituting a sending test for a receiving test. Instead, the League observed in its filing, there is "a tendency for applicants to seek exemptions instead" of accommodations.

The League said it believes the procedural changes alone will help to deter those who might abuse the process while still allowing exemptions to deserving applicants.

(For some additional thoughts on this subject, see the editorial "It Seems to Us" by David Sumner, K1ZZ, QST, Oct 1997, page 9.--Ed.)

KC5VPF UPBEAT ABOUT MIR STAY

US astronaut Dave Wolf, KC5VPF, is looking forward to an enjoyable stay aboard the Russian Mir space station, especially with all the "computers and ham radio gear." The shuttle Atlantis, which delivered Wolf to Mir and took US astronaut Mike Foale, KB5UAC, back to Earth, also delivered a new computer to Mir. Computer failures have plagued the space outpost for months.

Foale, meanwhile, said in a packet message that he's looking forward to seeing his family again, after spending the past four months aboard Mir. "I will be sad to leave my good Russian friends Anatoli and Pavel here on Mir, but it is now time for me to say good-bye to them, and to all the hams in the world who have spent the time to talk to us."

While both men were together in space, Foale said he planned to spend some time showing Wolf how to operate the Mir personal message system (PMS) and ham gear. "I hope you will enjoy many contacts with him," he said. "Best wishes." Like many other astronauts, Wolf got his ham ticket in the event that he might be able to operate from space. He has no experience on the air, however.

A medical doctor and engineer, Wolf, 41, is scheduled to remain aboard Mir until January, when he'll be replaced by US astronaut Andy Thomas, KD5CHF.

Vladimir Titov, KD5AOS, a veteran Russian cosmonaut flying on the shuttle, and Atlantis flight engineer Scott Parazynski, KC5RSY, made a space walk October 1 to look for the puncture in the hull of the Spektr module from the June 25 collision with a cargo rocket. Titov goes down on record as the first Russian to walk in space from a US shuttle.

Meanwhile, the Mir International Amateur Radio Experiment--MIREX--is calling a success the just-ended experiment to use 70 cm for voice and packet communication with Mir. Ham radio activity has returned to 2-meters (145.985 MHz simplex or 145.800/200 MHz split).

MIREX says that 2 meters will continue to be the primary means of contacting the hams aboard the Russian space station, because it's more widely available around the world. But, the experimental 437.650 MHz frequency might still be used as an occasional backup, especially when the 2-meter radio aboard Mir suffers interference from the commercial radio on 143 MHz.

The three-week long 70-cm experiment ran from September 8 until September 28. Preliminary results show that the Mir crew did not experience any interference to the 70-cm station from other equipment on Mir. Likewise, the 70-cm transmissions from Mir did not appear to interfere with any equipment on Mir. More than 110 stations around the world successfully contacted the Mir PMS while it was active on 70 cm, and simple ground stations were able to contact Mir on voice provided that they compensated for Doppler shift.

MIREX continues to gather information on the 70-cm experiment from amateurs who used the 437.650 MHz frequency. Contact Dave Larsen, N6CO, doc@volcano.net, for more information.--SpaceNews/Miles Mann, WF1F; AMSAT News Service

FUNCTIONAL SPUTNIK MODEL SET FOR MIR LAUNCH

Plans remain in place to launch a functioning mini-Sputnik from Mir October 4--the 40th anniversary of the launching of Sputik 1 by the USSR. Sputnik 1 was the first manmade satellite put into orbit around Earth.

Earlier this year, an agreement was signed between Russia and France to commemorate the 40th anniversary of the launch of Sputnik 1, and two groups of high school students cooperated in building the one-third scale model of the original Sputnik 1. Students in Russia built the satellite itself, while students in France built the 2-meter transmitter that will "beep" from space following its launch from Mir. The mini-satellite flew as cargo to Mir last month aboard a Progress rocket. According to Miles Mann, WF1F, of MIREX, the Mir crew will place the satellite in an airlock on Mir and push it out the door on October 4.

Following launch, the scale model of Sputnik will remain close to the Russian space station. It's estimated that its batteries will hold up for up to two months.

The transmitter will put between 100 and 200 mW into a circularly polarized antenna. The transmitter frequency is expected to be between 145.81 and 145.85 MHz (FM). The audio tone will be at 1.3 kHz but vary with temperature. For more information, see http://www.oceanes.fr/~fr5fc/angspoutnik.html.--thanks to AMSAT/This Week in Amateur Radio

FLORIDA JUDGE THROWS OUT CASE AGAINST HAM

A County Court judge in Florida has dismissed a case against Joseph Osborn, KF4HXE, of Plantation, Florida, whose radio gear was confiscated by police under Florida's "scanner" law earlier this year. Osborn was involved in a minor accident on May 8, 1997, and subsequently cited by police in Davie, Florida, allegedly for breaking state law by having radios in his car capable of receiving police frequencies. Although the law specifically exempts hams, Davie Police impounded Osborn's equipment anyway because he could not produce his ham ticket--lost during a recent move. Even after Osborn showed Davie Police a copy of his license, authorities refused to drop the charges or to return his radios. Osborn later learned that police might have tampered with his equipment, possibly damaging it and voiding warranties.

Alexander L. Kaplan, KF4QBU, of Boca Raton--an ARRL Volunteer Counsel--represented Osborn. John Hennessee, N1KB, of the ARRL Regulatory Information Branch, supplied information on federal pre-emption.

Broward County Court Judge J. Steven Shutter ordered the case dismissed late last month. Shutter said the state law does not require hams to have their licenses in their possession, as local police had asserted. The judge also cited federal pre-emption of prosecution of hams under state and local laws that make it illegal to possess scanning radios capable of receiving public safety or emergency frequencies. Florida's law bans such scanners in vehicles and in retail stores, but not in homes.

Shutter ordered Davie police to return Osborn's radio equipment within ten days of his ruling and to provide an affidavit specifying "who, what, when, where and how the radios were examined and what was done to them." Osborn has since recovered his radios from the Davie Police but not the required affidavit. Kaplan said this week that he's considering filing a contempt order. He also says he's begun civil proceedings against the Town of Davie. Meanwhile, an independent repair shop is evaluating Osborn's equipment to see if it was damaged.

FCC "WIPs" VANITY APPLICANT OVER MISSING SPACE

Rick McMillion, K6SIX (ex-WB7UGZ), of Winton, California, found out the hard way that the FCC takes its spaces seriously. Back on August 6, McMillion was among the hundreds of hams who filed under vanity Gate 3 for a new call sign. Six weeks later, when the FCC finally issued a big chunk of new call signs to Gate 3 first-day applicants, McMillion was dismayed that his was not among them. But none of the call signs he'd requested had been issued to anyone else, either. Obviously, his application had arrived in that twilight zone Gettysburg calls WIPs, for "work in process."

After waiting another week, McMillion says he just couldn't stand the suspense. "I had already received my canceled check back from the FCC, so I knew they had received it," he said. It wasn't until he called the FCC's toll-free number (888-225-5322 or 888-CALL-FCC) that he found out that in the world of the FCC, sometimes nothing is something. "The person told me that the FCC database and my license had my name listed as "Mc Million" [with a space], and my vanity application had "McMillion" [without a space]. Because of this, the FCC did not process his application because the

computer showed that his last name on the application and his last name in the FCC database did not agree. "I could not believe what I was hearing," said McMillion, who's never spelled his last name with a space between the "Mc" and the "Million" [although this is how the FCC database handles such names--Ed]. The FCC told him there was nothing he could do about the "misspelling," but McMillion had other plans. He fired off e-mail messages to FCC Commissioner Rachelle Chong and to John Johnston in the FCC's Wireless Telecommunications Bureau.

McMillion wasn't expecting much, but within a day, he got a reply from Johnston saying he'd check with Gettysburg. An hour later, he heard from Larry Weikert at Gettysburg stating that there were "some editing problems with Gate 3," and that McMillion's new call sign would be among the first issued when the problems were resolved. True to his word, Weikert messaged McMillion the next day to alert him that he'd just been granted K6SIX.

McMillion says he's impressed. "It's refreshing to know that one person can get a problem resolved with the FCC in a very fast efficient manner." He says he hopes his experience helped out a few others who might have run afoul of the "space" problem.

ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE JUST AHEAD!

Just in case you haven't yet gotten the word, the joint ARRL/TAPR Digital Communications Conference is a week away--October 10-12--just outside Baltimore, Maryland, at the BWI Holiday Inn.

Some interesting seminars, symposiums, and special events are on tap, in addition to the main paper session all day Saturday. Papers scheduled cover APRS, DSP, HF, Linux, Spread Spectrum, and more. Yutaka Sakurai, JF1LZQ, vice president of Japan's Packet Radio User's Group (PRUG), will be this year's banquet speaker. He'll talk about PRUG and some of its projects.

The DCC is not just for digital experts. This year's conference presents beginning, intermediate, and advanced presentations, including APRS, satellite communications, TCP/IP, digital radio, spread spectrum and other introductory topics.

A full day symposium on Friday covering APRS will be conducted by Bob Bruninga, WB4APR (the father of APRS), Keith Sproul, WU2Z, and Mark Sproul, KB2ICI (developers of Mac and Windows APRS), Steve Dimse, K4HG (developer of javAPRS), and other nationally known APRS leaders.

Other seminars are set for later Friday and on Sunday. Those wishing to attend just a symposium or seminar don't have to register for the entire conference.

For more information on the conference and hotel accommodations, contact Tucson Amateur Packet Radio, 8987-309 E. Tanque Verde Rd, Tucson, AZ 85749-9399; tel 940-383-0000; fax 940-566-2544; e-mail tapr@tapr.org; http://www.tapr.org.

WALL STREET JOURNAL ARTICLE FEATURES MORSE CODE

Without looking at the "translations," most hams would have a hard time deciphering the Morse code represented in an article that appeared in the October 1 edition of prestigious Wall Street Journal. That's because most of the code shown is American Morse, not the International code hams use. The report, "The Internet Generation Taps into Morse Code," by Anna Wilde Mathews, focuses on a resurgence of interest in American Morse Code--the version Samuel F. B. Morse invented in the 19th century and used for many years by railroad and Western Union telegraphers.

The ARRL and ham radio also are mentioned, but Mathews' otherwise interesting article fails to distinguish between American Morse, the telegrapher's code, and International Morse, the radioman's code.

SOLAR FLUX CONTINUES UPWARD

Solar guru Tad Cook, K7VVV Seattle, Washington, reports: Again this week the average solar flux for the previous 90 days rose two points, and again the daily flux values were above 83, which was the high average value on Wednesday, the last day of the reporting week. Wednesday was the fifty-eighty consecutive day that the solar flux was above the average for the preceding 90 days, and this is a very positive sign indicating a general upward trend in the new solar cycle.

This increased activity can have a downside though, and on October 1 the geomagnetic field was very unstable, which generally means higher absorption, especially on high-latitude and polar signal paths. The planetary A index was 41, and planetary K index went as high as 6. The A index measured at College, Alaska, was 67, and the highest K index was 8, which means miserable HF conditions. These stormy conditions were caused by a flare and a coronal mass ejection a few days earlier. (For a good explanation of K and A indices, see the Propagation chapter in any recent edition of the The ARRL Handbook.)

Conditions stabilized October 2, and geomagnetic conditions were very stable, with the Alaska K indices at zero over most of the day, and worldwide it was mostly one and zero.

Over the next few days look for higher solar activity, with the solar flux up over 100 around October 7-11. It may dip below 90 after mid-month, then rise again to around 90 until November. Based on the previous solar rotation, October 25 and 26 may be unstable. Look for a smaller possibility of geomagnetic instability on October 12 and again on October 15.

Sunspot numbers for September 25 through October 1 were 50, 40, 33, 23, 27, 25 and 38 with a mean of 33.7. The 10.7-cm flux was 88.5, 89.1, 88.4, 87.2, 89.7, 87.7 and 87.1, with a mean of 88.2, and estimated planetary A indices were 3, 4, 13, 14, 9, 7, and 41, with a mean of 13.

For the VK/ZL/Oceania contest this weekend, here are a few projections for conditions to that part of the world:

From the center of the continental United States check 80 meters 0630-1230 UTC, 40 meters 0600-1300 UTC, 20 meters 0300-1530 UTC, 15 meters 1930-0130 UTC, and 10 meters 2130-2330 UTC.

From Southern California, check 80 meters 0630-1400 UTC, 40 meters 0600-1430 UTC, 20 meters 0300-1030 UTC, 15 meters 1900-0330 UTC, and 10 meters 2300-0130 UTC.

From Texas check 80 meters 0630-1230 UTC, 40 meters 0600-1300 UTC, 20 meters 0230-1100 UTC, 15 meters 1830-0200 UTC and 10 meters 2130-0030 UTC.

From the Southeast states check 80 meters 0700-1200 UTC, 40 meters 0600-1230 UTC, 20 meters around 0300 UTC and 1300-1500 UTC, 15 meters with weaker signals around 1900-2300 UTC, and possible 10 meter openings around 2130-2300 UTC.

From the New York area check 80 meters 0700-1130 UTC, 40 meters 0630-1200 UTC, 20 meters possibly around 0400-0530 UTC and 1300-1530 UTC, although conditions do not look promising, and 15 meters with only fair signals from 1930-2330 UTC, and a possible opening on 10 meters from 2000-2130 UTC.

IN BRIEF:

* This weekend on the radio: The California QSO Party, the VK/ZL/Oceania Contest, and the RSGB 21/28 MHz Contest are featured. See October QST, page 107 for details.

* Corrections: Re The ARRL Letter, Vol 16, No 38--the story on Form 159 should have said "Form 610V." The correct title of the song that Patty Loveless, KD4WUJ, sang with George Jones during the recent CMA Awards telecast was "You Don't Seem to Miss Me."

* Vanity update: FCC has processed August 7 vanity call sign application receipts and granted 112 new call signs. The FCC reports that of the 759 "work in process" or WIPs applications from August 6, almost all were duplicates. Following the approximately 600 grants from August 6 receipts, the FCC issued another 50 new call signs from the WIPs stack.

* Update--special event to mark Sputnik launch anniversary: Special event stations MX1ASE (Amateur Satellite Experimenters) and GX0AUK will mark the 40th anniversary of the launching of Sputnik 1 on October 4, 1957, by the Soviet Union. The 184-pound, basketball-sized sphere was the first artificial Earth satellite. MX1ASE and GX0AUK will be on air for 24 hours on October 4, 1997. Then, activity will continue into November, ending at 2359 UTC on November 3, the date of the 40th anniversary of the launch of Sputnik 2. MX1ASE and GX0AUK will be active in voice mode on all available analog satellites, concentrating on RS-10, RS-12, RS-15, RS-16. Joining the event will be Leo Labutin, UA3CR, and Andy Miranov, RK3KPK, of the Russian Satellite Ground Station near Moscow. RK3KPK will be on CW on the RS birds and UA3CR on voice and CW on FO-20 and FO-29, which will be switched to mode JA for this occasion. An SWL award, special QSL cards and an award certificate are available for those working any of the participating special event stations on more than one satellite. The limited-edition Anniversary Award Certificate is $10. Apply to John Heath, G7HIA, Chestnuts, Desford Ln, Kirkby Mallory, Leicestershire LE9 7QF, England.--AMSAT News Service/John Heath, G7HIA; NASA

* JOTA to mark 40 years: JOTA 1997 will mark the 40th Jamboree On The Air. This year, JOTA will take place on the weekend of October 17, 18 and 19. The ARRL Scout Handbook has lots of details on JOTA, and on the Radio merit badge. It's available at http://www.arrl.org/ead/#scout. Some DX stations already have indicated they'll be active in this year's JOTA event. Look for HB9JAM, the official call sign of the Swiss Scout Federation, Bern, Switzerland on HF, as well as HB4FF and HL9BSA (dependent children of US military and civilian personnel stationed in Korea).--thanks to Glenn Swanson, KB1GW; Ulrich Fierz, HB9AIK; and Vernon Eubanks, HL9VE/K0LVS

* QST Cover Plaque winner: Robert W. Schmieder, KK6EK, won the September 1997 QST Cover Plaque for his article, "The 1997 VK0IR Heard Island Expedition." Congratulations, Bob!

* AMSAT board election results: The results are in for the annual AMSAT Board of Directors balloting. A total of 1386 members voted in this year's election. Elected to two-year terms were Bill Tynan, W3XO (1234 votes); Stan Wood, WA4NFY (1161 votes); Dick Daniels, W4PUJ (1114 votes); and Joe Holman, AD7D (933 votes). Barry Baines, WD4ASW (842 votes), will serve as the alternate until the next AMSAT Board election. The newly elected board will gather during the AMSAT-NA annual meeting later this month to elect officers.--AMSAT News Service

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org. Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

128. ARLB058 FCC announces electronic renewal Form 900

From ARRL Headquarters
Newington CT October 3, 1997
To all radio amateurs

SB QST ARL ARLB058
ARLB058 FCC announces electronic renewal Form 900

Hams now can renew their licenses on line. The FCC's Wireless
Telecommunications Bureau (WTB) has consolidated eight renewal forms
into one form. Form 900, Application for Electronic Renewal of
Wireless Radio Services Authorizations, is an interim measure to
permit all WTB licensees, including hams, to renew their licenses
electronically.

This form is only for renewals, not for license modifications. You
can only enter changes (eg, name, address) using Form 900 as a part
of the process of renewing your license. You can only use Form 900
if the expiration date on your license falls within the renewal
window (within 120 days of expiration). You cannot use Form 900 to
renew an expired license. Form 900 may only be submitted
electronically. No Form 900 paper applications will be accepted.
When filing Form 900, you will be required to enter a Social
Security Number for a taxpayer ID number.

Access Form 900 on the WTB Electronic Commerce page,
http://www.fcc.gov/wtb/electcom.html (click on Production Page for
Electronic Commerce Applications to access the Form 900). Click on
any item number for filing instructions. Once you have filed the
form, clicking on Electronic Renewal Query lets you view or print
the information submitted.

Once you have successfully submitted Form 900, it is important to
click on the Continue button to obtain the fee information
pertaining to your filing. The screen will prompt you with a Fee
Remittance Advice, Form 159. The form will indicate that there is no
charge to renew an Amateur Radio license (except for vanity call
sign holders, who won't have to renew for several more years yet).
```

Form 900 updates will be batch processed at night. They are not instantaneous.

Send comments about the FCC Form 900 to sreed(at)fcc.gov. For technical assistance, call the FCC Technical Support Group at 202-414-1250. Other general information may be obtained from the FCC's National Call Center at 888-225-5322 (CALL-FCC).

ARLB059 ARRL seeks changes to CW waiver rules

ZCZC AG59
QST de W1AW
ARRL Bulletin 59 ARLB059
From ARRL Headquarters
Newington CT October 3, 1997
To all radio amateurs

SB QST ARL ARLB059
ARLB059 ARRL seeks changes to CW waiver rules

The ARRL has asked the FCC to change the way Morse code exam exemptions for severely handicapped applicants are handled. The League wants to change the procedural requirements in Part 97 that must be met, prior to granting examination credit.

Under the League's proposed changes, a candidate at least would have to attempt the CW test--with any and all necessary accommodations--before being granted an exam waiver based on a physician's certification. Also, Volunteer Examiner Coordinators (VECs) would be entitled to request medical information pertinent to an applicant's handicap from the certifying physician. VECs also would be required to have this information on file before the application is forwarded to the FCC for processing.

In its petition filed September 23, the League said the two ''rather minor changes'' are needed to restrict the waiver process to use by severely handicapped individuals ''for whom the process was intended in the first place and who deserve the substantive accommodation.'' The League also said the changes would ''stem abuses'' of the waiver system without putting unreasonable burdens on examinees.

The CW waiver system has been in effect for seven years. The League says that experience has shown that many applicants without severe handicaps ''have abused the process'' by obtaining physicians' certifications of inability to pass the telegraphy examination. At present, 8 of those applying through the ARRL-VEC have requested a medical exemption from the higher-speed code requirement. Another large VEC reports similar experience. The League cited ''a growing suspicion'' in the ham community of anyone who has upgraded by using the waiver route. But the League said this is ''completely unfair to those who require and deserve the exemption because they cannot be accommodated by procedural means.''

FCC rules requires volunteer examiners to exercise broad latitude in administering CW exams to accommodate handicapped applicants. Measures include using a flashing light or vibrating surface for hearing-impaired applicants, pausing in sending after sentences, phrases, words or even characters to allow an examinee time to interpret, or even substituting a sending test for a receiving test. Instead, the League observed in its filing, there is ''a tendency for applicants to seek exemptions instead'' of accommodations.

The League said it believes the procedural changes alone will help to deter those who might abuse the process while still allowing exemptions to deserving applicants.

And what about the 52 1x1 stations that operated from San Francisco
during the World Radiosport Team Championship July 13 and 14, 1996?
Worked all but one of them (had to rely on the AH3C and AH3D "jokers"
to make my souvenir deck of cards!).

From an interview by Elisabeth Bumiller, The New York Times, with Kurt Vonnegut.

Technology, Vonnegut says, is creating "people who are being cheated out of life as human beings." He adds that "when I was a kid in Indiana, there were people with very poor complexions and not very popular who spent all their time in the attic or in the basement. And these were ham radio operators. And they'd say - can you believe it - 'I've got a friend in Nome, Alaska.'"

Jeff:

As you are a Morse "nut" (and a former Coastie), I assume
you saw the article in the Oct 1st WallStreet Journal.

I had a professor (Vern Folley) at Purdue who taught
a course on the History of Western Technology. He has
a premise that anything that is no longer needed by
society, becomes a hobby. And the folks that practice
that hobby are living museums, keeping that knowledge
alive for society. His examples were hunting, fishing,
small plot gardening and weaving.

The WSJ article was in that vein. It was how folks are
keeping Morse alive in an digital age.

In selected areas the Seiko Messenger does this. Timing signals are sent
every 20 minutes. The watch is also an alpha-numeric beeper.

COLS COLUMN

ONE OF THE BEST TIMES TO DO MY THINKING IS WHEN MY LITTLE
SYDNEY SILKY TERRIER TAKES ME FOR MY AFTERNOON WALK. ONE DAY
DURING THE WEEK, WE PASSED A SMALL CAR PARKED OFF-ROAD ON A
NICE PATCH OF GRASS, WITH A FOR SALE NOTICE ON IT. THE CAR
THAT IS, NOT THE GRASS. SOMEONE HAD TAKEN A LOT OF TROUBLE
WITH CLEANING THE CAR, SO I GAVE IT THE ONCE OVER AND A QUICK
SHUFTI INSIDE. COULD'NT HELP NOTICING THE MOBILE PHONE INSIDE.
AS WE CARRIED ON WALKING ALONG, FOR THE FIRST TIME I REALISED
JUST HOW IMMENSE WAS THE CHANGE IN COMMUNICATIONS IN THE LAST
4 DECADES OR SO.

DURING THE 1950'S I WAS SERVING IN THE RAF AS A WIRELESS
OPERATOR/TELEPRINTER OPERATOR, OR TELEGRAPHIST AS WE WERE
OFFICIALLY NAMED. FROM 1951 TO 1954 I WAS STATIONED IN
SOUTHERN RHODESIA, NOW ZIMBABWE, FOR APPROX 3 YEARS. AS AN EX
BOY AIRMAN, ALSO TRAINED IN TELEPHONY, I WAS SOMETIMES CALLED
UPON TO DO A SHIFT IN THE TELEPHONE EXCHANGE.

IF ANYONE WANTED TO PLACE A PHONE CALL TO THE U.K. OR FOR THAT
MATTER OTHER PLACES IN THE WORLD, THEY ORDERED THE CALL
THROUGH THE STATION EXCHANGE AND FOUND THAT A DELAY OF 3 DAYS

EXISTED. IT WAS ALWAYS 3 DAYS, AND ONE JUST HAD TO WAIT OUT THE TIME. NOT THAT US MERE MORTALS OF ENLISTED FOLK EVER MADE OVERSEAS CALLS, IT WAS THE 'OFFICERS AND GENTLEMEN' THAT COULD AFFORD SUCH LUXURIES.

3 DAYS, CAN YOU IMAGINE HAVING TO WAIT THAT LONG NOW. WE JUST PICK UP OUR PHONE AND DIAL OUR OWN OVERSEAS NUMBER. BUT BACK THEN EVEN TRUNK CALLS WITHIN YOUR OWN COUNTRY HAD TO GO THROUGH THE LOCAL EXCHANGE AND COULD TAKE SOME TIME BEFORE CONNECTION. IT WASN'T THAT LONG AGO....

THE REASON WE WERE IN SOUTHERN RHODESIA WAS PILOT TRAINING. THE LAST OF THE EMPIRE TRAINING SCHEME FLYING SCHOOLS WERE THERE. OUR ONLY LINK TO THE OUTSIDE WORLD WAS CW TO AN RAF COMMUNICATIONS CENTRE IN THE MIDDLE EAST, SOMEWHERE IN EGYPT. THEY RELAYED OUR TRAFFIC ONWARDS TO THE AIR MINISTRY AND OTHER RAF UNITS IN THE UK. WE HAD TO DO 25 WORDS A MINUTE OR MORE ON THAT CIRCUIT. WE WERE NEVER QRU, THERE WAS ALWAYS A BACK LOG OF MESSAGES WAITING TO SEND OR RECEIVE, 24 HOURS A DAY.

I WILL NEVER FORGET THE MENTAL AGONY OF RECEIVING MY FIRST CODEDMESSAGE. 5 PAGES OF 500 5 LETTER CODE GROUPS, A 2500 WORD MESSAGE. CODED MESSAGES ALWAYS TOOK LONGER AND AVERAGE SPEED DROPPED TO ABOUT 22 WPM. AT 20 WPM IT TOOK 2 HOURS AND 5 MINS TO RECEIVE ALL FIVE PAGES.

OUR TRANSMITTERS WERE HIGH POWERED SWB8'S. IF ANYONE IS FAMILIAR WITH THEM YOU COULD PERHAPS LET US KNOW THE EXACT MAXIMUM OUTPUT, BUT I SEEM TO REMEMBER WE NORMALLY RUN AT A REDUCED POWER OF ABOUT 4000 WATTS. THE TRANSMITTER ITSELF WAS LOCATED ABOUT 2 MILES FROM THE COMM CENTRE. OUR RECEIVERS WERE THE RCA AR88'S, WONDERFUL RECEIVERS FOR THEIR DAY. PREVIOUS TO SERVING IN RHODESIA, I WAS STATIONED AT A LARGE COMM CENTRE IN ENGLAND FROM ABOUT 1948, ENGAGED IN RTTY CIRCUITS TO SUCH PLACES AS THE MIDDLE EAST, COLUMBO, INDIA AND THE FAR EAST ETC. I STILL FIND IT STRANGE WHEN WE TALK ABOUT RTTY STARTING IN THE 70'S.

FINALLY I WOULD LIKE TO REMIND ALL STATIONS IN NSW AND MAYBE A LITTLE FURTHER, THAT I HAVE MY AMTOR/PACTOR MAILBOX AVAILABLE EACH SUNDAY AFTERNOON. YOU WILL FIND THE CURRENT ANARTS CAST IS AVAILABLE THERE. SO WHY NOT GIVE ME A CALL AMTOR OR PACTOR ON 3542 KHZ FROM ANY TIME AFTER 1 PM UNTIL 6 PM, EST. OR 0100 TO 0600 UTC. MY SELCALL IS VCTD.

THATS ALL FOR NOW 73S AND SEE YOU NEXT TIME DE COL VK2CTD.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(18 SEPTEMBER -24 SEPTEMBER)

ISSUED 25 SEPTEMBER 1997

SUMMARY
Date 18 19 20 21 22 23 24
10cm 88 88 NA 85 89 92 93
A 14 NA 7 12 10 5 (4 expected)
T 31 27 41 38 26 39 43

Solar activity was very low 18th to 23rd September; becoming high on 24th with an M5 flare at 0248UT , and an M3 flare at 1106UT. A shortwave fadeout was observed 0253-0305UT at Sydney.

The geomagnetic activity at Learmonth W.A. was quiet on 19th and 23rd; quiet to unsettled on 20th and 24th; quiet to active on 18th, 21st and 22nd.

Maximum usable frequencies were mostly near predicted monthly values. There was a 20 per cent enhancement from 0800 to 1300 UT on 21st September. Spread F was reported on 23rd.

FORECAST (25 SEPTEMBER - 01 OCTOBER)

Solar: Moderate, SWFs can be expected on daylight HF circuits.

Geomagnetic: Minor storming expected 26-27 Sepetember due to M5 flare on 24 September. Then unsettled.

Frequencies: Degraded conditions expected 26 September, depressions expected after local dawn on 27 September. Then returning to normal 28 Sep. to 01 October.

COURTESY OF IPS RADIO AND SPACE SERVICES

IPS IS MOVING

IPS Radio and Space Services Sydney is moving to a new location. From Monday 29 Sep 1997, our contact details will be as follows:

NOTE OF INTEREST:

ANGOLA, D2. Mr. Dias, CT4KO, will be active as D2AI from Luanda until September, 1998. Look for him on the following frequencies and modes: SSB - 3797, 7050, 14202, 18165, 21302, 24925 and 28402 kHz. RTTY - 14085, 18102, 21085, 24895 and 28185 kHz

LYBIA, 5A28 and WILLIS, VK9WY. We must surely congratulate both team for their fantastic job done on RTTY knocking off QSO's at very fast rate. Thanks again for the effort from all rttyers and we really wish to those going onto the rare spot could do the same.

The VK2SG RTTY DXNOTES are also available on Internet at reflector digital-dx at st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/(tilde) jukka/rtty.html

For next week's bulletin send your bandpass to Luciano, I5FLN at I5FLN at ZS5S.ZAF.AF or VHF Packet : I5FLN at IK5MEP.ITOS.ITA.EU or via e-mail: i5fln at iol.it

Gl de (DX2) Luciano, I5FLN

SB DX ARL ARLD040
ARLD040 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, The Daily DX, The 599Rpt, Richard VK2SKY, QRZ DX, DXNS and Contest Corral from QST. Thanks to all.

RWANDA, 9X. Andy, RW3AH, is QRV as 9X0A. QSL to home call.

MOLDOVA, ER. Chris, K4PC, will be QRV as ER0PC Sep 28 until Oct 12 while on missionary work. He hopes to be active on 160 to 40 meters, using CW, SSB and RTTY as time permits. QSL via K4PC.

ANTARCTICA. Wally, R1ANZ, is active from Mirnyy Base and can be found around 14190 kHz after 0330z. He has also shown up on 40 meters using CW around 1000z. QSL via RU1ZC.

WESTERN SAHARA, S0. S0RASD has been QRV on 20 meters between 1730 and 1800z working into Europe. QSL via EA2JG.

GABON, TR. Jean, TR8XX, is regularly QRV using CW on 40 meters at 0600z. After which, he will QSY to 30 and 20 meters. QSL to home call.

PITCAIRN, VR6. Meralda, VR6MW, has been QRV on 20 meters at 0200z. QSL to home call.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VK2WI, or the Secretary (Pat) VK2JPA at VK2WI.

Email address for the Broadcast Officer is : patl(at)conmusic.usyd.edu.au or patl(at)mail.users.usyd.edu.au

73s de Pat VK2JPA Broadcast Officer.

Have received many bids on the eico vtvm kit. Too many to reply to by the
each.
Highest bid by midnight CDT Friday 10/3/97 gets it.

You can try to linearise 7360 with some negative feedback, too!!!

The main benefit using of 7360 in mixer configuration is from fact
that it always works while being in it's most LINEAR range - 100% of
time!

On contrary - almost all other devices used in mixers circuits
are driven from its best linearity point (at least - for a little
fraction of time) by heterodyne and much smaller interferences can
distort
useful signal at these moments. No matter what devices are used -
linearised or not, bipolars, FET's, or tubes, no matter - how many
gates or grids are used for mixing. All they are in NONLINEAR region
at these moments!
Brute force can help - you must feed mixer with plenty of
heterodyne - to ensure that any interference will not counterweight
hetrodyne's action. Fast switchers can minimise fraction of
non-linearity time.

Sometimes this works, sometimes not - as in modern multi$$$ boxes for
hams...

7360 uses beam deflection for heterodyning - this doesn't act on
linearity.
Just pure mathematical multiplying - so you can get maximum for nothing
(almost),
except that you'll generate some heat and light...
And if you like brute force - 4CX250 (four pieces) in double balanced
configuration is the best solution...

Xcuse - if I was speaking abt well-known things. I just pointed to one
aspect
of the problem, and agree 100% (almost ;^) with you, oldtimers,
elsewhere.

Had a great pleasure to read!

It seem's I'm off-topic a bit ...
73, Vytas LY2PU

EXAMINATIONS

The next examinations will be held at Amateur Radio House Parramatta
on Sunday 26th October 1997. Candidates who have lodged applications
are requested to report at 12 noon, and the exams will start as soon after
that time as possible, but no later than 12.30 pm.

Please apply to the office for the necessary forms. Applications close on
Thursday 16th October. Acceptance cannot be guaranteed for any
applications received after that date.

-- Eric VK2EFY, Divisional Secretary

VK2RSY 23 CENTIMETRE BEACON BACK ON LINE.

The Dural based 23 centimetre beacon is now back in service following a
check over by members of the Dural Technical Committee.

It was found that power output had dropped to a few milliwatts and the frequency had shifted.

VK2RSY can be found on approximately 1296.425 Megahertz with 3 watts delivered to the slot antenna, 12 metres above ground. Polarization is Horizontal.

Frequency stability is not good due to the high multiplication from the crystal. Consideration is being given to revamping the frequency system at a future date.

It has been planned for some time to place the beacon on the alternate channel of 1296.425 to enable those with chanellized equipment to receive it. Reports are most welcome and a QSL card is available via the normal exchange methods.

--73 Tim VK2ZTM

JAMBOREE ON THE AIR (J.O.T.A.)

SCOUT AND GUIDES JAMBOREE ON THE AIR WILL CELEBRATE THE 40TH YEAR OF OPERATION ON THE 18th-19th OCTOBER WITH OVER 400 STATIONS OPERATING IN AUSTRALIA.

IN 1996 ALMOST 14000 AMATEUR OPERATORS WORLD WIDE WERE KNOWN TO HAVE PARTICIPATED IN THE EVENT AT 5735 STATIONS. THE OPPORTUNITY FOR SO MANY BOYS AND GIRLS TO COMMUNICATE WITH EACH OTHER IS ONLY MADE POSSIBLE BY THE CO-OPERATION OF THE AMATEUR OPERATORS WHO HAVE YEARLY GIVEN THEIR TIME AND USE OF EQUIPMENT TO THE SCOUT AND GUIDE MOVEMENTS.

THE WORLD WIDE INTERNET HAS ALSO IN THE PAST THREE YEARS BECOME AN INCREASINGLY POPULAR MEANS OF COMMUNIACATION WITH BOTH THE SCOUTS AND GUIDES DURING JOTA.

IN APPRECIATION OF OF THEIR HELP IN MAKING THIS 4OTH JOTA, A MEMORIAL OCCASION A SPECIAL ANNIVERSARY CERTIFICATE WILL BE AVAILABLE TO THE AMATEUR RADIO OPERATORS AND INTERNET OPERATORS OF NEW SOUTH WALES WHO TAKE PART.

WIA (VK2 DIVISION) CLUBS AWARD

The aim of this award is to encourage radio amateurs and short wave listeners to activate or to log amateur radio activity from the many different clubs which are affiliated with the New South Wales Division of the Wireless institute of Australia. For the purpose of this award, WICEN NSW Inc. is not considered an affiliated club.

Any band, mode and power level permitted by an individual's licence can be used for this award.

The award commenced ar 0001 UTC on 1st January 1988.

The basic certificates will be issued on proof of contact with 25 clubs. Callsigns of he Wireless Institute of Australia, New South Wales Division

(VK2WI, VK2AWI, VK2BWI) will count as two contacts each. Special event callsigns held by the Wireless Institute of Australia, New South Wales Division (VK/AX2ITU etc.) will also count as two contacts each.

Short wave listeners shall need to log the callsigns of both the club station and the station working it. A minimum number if 25 clubs need to worked in this way to obtain the basic award. Callsigns held by the Wireless Institute of Australia, New South Wales Division will be counted as two contacts each.

Endorsements will be available for 30, 35, 40, 50 etc. clubs When all have been worked, and application made, then a "Worked all VK2 Clubs" endorsement will be issued.

Accurate logs will be required for the award. Logs must show, in chronological order, the following information. UTC data & time, mode of operation, frequency of operation and club name.

Applicants for the award mut submit full log sheets and declaration in accord with the General Rules for all WIA awards, as listed in the current Australian Radio Amateur Callbook. The VK2 AWARDS application form must be completed and submitted with all logs and applications.

The cost of the basic award is

Australia & Territories: Aus$4.00 (4 IRCs)
Overseas Air Mail: Aus$5.00 (5 IRCs)

The cost of the endorsements is

Australia & Territories: Aus$2.00 (3 IRCs)
Overseas Air Mail: Aus$2.50 (3 IRCs)

Payment may be by cheque or postal order and shall be in Australian currency only. International Reply Coupons (IRCs) of less than one year old may also be used to apply for the award.

For the booklet containing the information on this and the other WIA VK2 awards, please send a stamped self addressed envelope (at least 200mm x 100mm, or 8 inches x 4 inches) to:

The Awards Manager
Wireless Institute of Australia
New South Wales Division
PO Box 1066
PARRAMATTA NSW 2124

-- Peter O'Connell VK2EMU, Divisional Awards Manager

On Internet, you will find details of all VK2 awards; simply go to the VK2 Divisional home page at: http://marconi.mpce.mq.edu.au/wia/ ...just click on "Awards" in the Navigation section.

WICEN NEWS

A mailing list for those interested in WICEN has been set up; just send a message to "majordomo@marconi.mpce.mq.edu.au" with "subscribe your-email-address" in the body of the message. Following approval, you will then be added to the list, and further instructions will follow. Note that although the list is unmoderated, it is closed i.e. only subscribers can post to it.

This month looks like being quite busy. The Oberon Car Rally, run by Neil VK2XNF, is on next Saturday (11th); the Hawkesbury Classic Paddle is organised by Kevin VK2CKD over the weekend of 18th-19th October; and the annual Bungonia Cave Rescue, run by Mark VK2XGK, will be on the weekend following, 25th-26th October.

The latter exercise, Bungonia, is planned to be a full-scale DVR (Disaster Victim Registration) exercise, with co-operation from the NSW Police and the other paid (and unpaid) services, and is excellent practice for operating in remote places (although you will be fed). We will also be using packet radio, on both HF and VHF, so packet-aware operators, with portable equipment, are required.

WICEN has been asked to once again provide radio communications for the "Ironman Australia" Forster-Tuncurry half triathlon, to be held on Sunday 23rd November. The event coordinator for this exercise is Steve Pettet VK2KXQ, to whom all enquiries should be directed.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6975, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or information they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, President, WICEN (NSW) Inc.

DX REPORT

SAO TOME AND PRINCIPE - Francisco CT1EAT will operate from October 21 to November 4. He will begin operations on Sao Tome Island on October 22 until the 30th using the call sign S92FC, then move on to Principe Island from October 31 to November 4 as S91FC. Check 80 through 10 meters, SSB and RTTY, including the newer bands and RS-12.

CHAGOS ISLAND - Rick WB0BNR is active as VQ9AI until mid-November. He can be found daily on 14186 or 14260 kHz around 1300z.

NEPAL - Rich 9N1RHM is now active on RTTY.

GABON - Jean TR8XX, is regularly active on 40 meters at 0600z, then QSYs to 30 and 20 meters.

UGANDA - Steve DJ1US reports he has received his 5X license. Look for him as 5X1S.

BRAZIL - PY1OB, PY1SL and PY1JH will be active as ZW1A on SSB, ZX1A on CW, 80 through 10 meters, and ZV1A on 6 meters, SSB and CW from Grande Island (SA-029) from October 3 through 5.

ICELAND - Preben OZ5AAH will be active October 26 through November 10 as TF/OZ5IPA. OZ5IPA is the club call sign of the IPA (International Police Association).

TURKEY - Look for Special Event Station YM3SV to be active October 25 to 31. Activity will be SSB only on 80, 40, 20, 15, 10, 2 meters and 70cm.

SOUTH AFRICA - ZS6Y will use the call sign ZS9F during the CQWW SSB Contest. Activity will be on all bands.

MAURITIUS - Skip JE2HCJ will be visiting Jacky 3B8CF, from October 3 to 12. Skip will be active as 3B8/JE2HCJ on 80 through 10 meters CW, SSB and RTTY.

PITCAIRN ISLAND - Mey JA6CT has recently become active as VR6CT.

-- ARRL DX Bulletin 42, dated 2nd October 1997

SPACE NEWS

HAM RADIO NOW AN "OFFICIAL" ISS PAYLOAD

Amateur Radio is now considered to be an official payload on the International Space Station (ISS). In fact, reports Matt Bordelon, KC5BTL, at Johnson Space Center, ham radio was the first payload to become official. Bordelon already has started the training program for the first crew who will be putting together the ISS starting in January 1999.

Based on our initial request to be manifested onboard, the ISS Payloads Office is listing Amateur Radio as being onboard with (1) a transportable station (H-Ts), (2) a site on the EXPRESS pallet, and (3) a permanent station on the Habitation Module. Amateur Radio soon will be assigned a Payload Integration Manager (PIM) for each of these.

--The ARRL Letter, Vol 16, No 38, dated 26 September

NEW USES FOR THE OLD CODE: MORSE 2000 WORLD CONFERENCE SET

Morse 2000 Worldwide Outreach is giving Morse code a new lease on life to help rehabilitate and educate people with special needs and disabilities. The first Morse 2000 World Conference is now set for late October in Minnesota.

Because it can be sent using a binary-opposition movement pattern, Morse code can be generated with left-right, push-pull and puff-sip control. The code--used in communication for the past 150 years and being phased out in many spheres--has proven to be among the best of several adaptive computer-access methods and augmentative or alternative communication techniques for many people with special needs. The ARRL Foundation has supported the program through grants.

"We now have over 2,000 participants in 27 countries!" exclaims Debra R. King, N9GLG, the director of Morse 2000 Worldwide Outreach. King manages the Office of Continuing Education in Human Sciences and Services at the University of Wisconsin--Eau Claire, and enthusiastically promotes the use of Morse code in rehabilitation and education.

Through her encouragement, various Morse code programs are being used or tested to allow people such as those with spinal cord injuries to converse. She provides information for occupational therapists or speech pathologists and promotes the advantages of using Morse code to help their patients. Occasionally, though, it works the other way around: sometimes patients hear about Morse 2000 and put their therapists in touch with King! The bottom line, however, is that the information she provides can save the therapist-patient team years of research attempting to find the best methods and selecting reliable equipment.

Results have generated heart-warming success stories, especially at learning centers and children's hospitals around the world, as reported in MORSEls, the Morse 2000 newsletter. One researcher told of the case of a woman with ALS (commonly called Lou Gehrig's Disease) who had lost her ability to speak but was able to communicate using Morse code--at first by blinking her eyes and later by using an optical switch activated
by jaw movement that was wired to a PC. The same researcher told of a stroke patient who employed his very limited movement to send Morse code messages to his wife. Another report tells of a stroke victim who is able to talk in Morse code by activating a chin switch.

Speech pathologist Thomas King, WF9I--Debra King's husband and the editor of MORSEls--called Morse code "one tool of many" in providing "adaptive access" for those unable to communicate through conventional means. He told of a young man he called Barry who had been severely injured and rendered aquadriplegic after being hit by a car as a youngster. He retained facial movement and can speak (although he's on a ventilator), but he can use Morse via a puff-and-sip switch to write 20 WPM or so. Now in the high school, Barry hopes to eventually attend college. "The use of Morse for taking notes without calling a lot of

attention to yourself has worked out very well," Thomas King said.

--The ARRL Letter, Vol 16, No 38, dated 26 September

COMPUTER RUNS OFF OF WIND-UP RADIO

On the international scene, news of a wind-up computer. Well almost. It all came to light at a recent demonstration at an educational conference in Botswana. That's where Apple showed that a low-powered E-Mate 300 computer can be connected to a radio powered by a wind-up generator.

Trevor Baylis, inventor of the fameous Bay-Gen clockwork radio said he was contacted by exhibitors from Apple Computer. They wanted to know if his radio, which has a jack in the back to plug in a flashlight, could be used to power a laptop computer.

Baylis suggested that they try it. It not only worked but they also found that the E-Mate 300 laptop would run for 24 hours on a single crank-up charge.

CLUB NEWS

THE OCTOBER MEETING OF THE ILLAWARRA AMATEUR RADIO SOCIETY INC.WILL COMMENCE AT 7:30PM TUESDAY EVENING , OCTOBER 14TH.

VISITORS ARE ALWAYS WELCOME TO ATTEND THESE MEETINGS . WHICH ARE HELD IN THE S . E . S BUILDING MONTAGUE STREET NORTH WOLLONGONG . DURING THE MEETING A REPORT , WITH VIDEO WILL BE GIVEN , HOPEFULLY , OF THE NEW AND EXCITING SOUTH COAST PROJECT .

AFTERS VICTORS GOURMET SUPPER , "" A LITTLE TIP VIC"" , LESS BLACK CAVIAR PLEASE !!!!!!!!!!! A GUEST SPEAKER WILL GIVE A SHORT BUT INTERESTING TALK ON A RADIO SUBJECT.

I WILL NOT BE ABLE TO ATTEND , AS I WILL BE AWAY GETTING INFORMATION FOR OTHER CLUB PROJECTS , BUT I HOPE MANY MEMBERS AND VISITORS ATTEND .

--FROM THE PUBLICITY OFFICER FOR THE I . A . R . S BRIAN VK2UBF. THE CLUB SETTING THE STANDARDS THAT OTHERS FOLLOW !

GLADESVILLE NEWS

The October meeting of the Gladesville Amateur Radio Club Incorporated will be held on Monday week, the 13th at the usual venue, Number One, Birdwood Avenue, Lane Cove. Start at 7.30 pm Visitors are most welcome. Parking is available opposite the venue in the public car park.

Contact with Gladesville may be made by telephone [02] 9427 0530 or by writing to P. O. Box 48, Gladesville 2111.

-- 73 Keith VK2ZO - Presidnet / TV Coordinator

LIVERPOOL & DISTRICT AMATEUR RADIO CLUB

THE NEXT MEETING OF THE LIVERPOOL & DISTRICT AMATEUR RADIO
CLUB WILL BE HELD ON WEDNESDAY 8th OCTOBER, 1997.

THIS MONTH'S LECTURE WILL BE ON RADIO IN THE MERCHANT NAVY
AND WILL BE PRESENTED BY PHIL VK2BTT WHO WILL SHARE SOME
OF HIS ADVENTURES WITH MEMBERS AND VISITORS TO THE
MEETING.

THE CLUB MEETS AT THE SCOUT CAMP, CAMBRIDGE AVENUE,
GLENFIELD. THE MEETING WILL START PROMPTLY AT 8.00PM.
VISITORS ARE ALWAYS WELCOME TO THE CLUB'S MEETINGS.

-- BOB VK2TG, PUBLICITY OFFICER

HORNSBY & DISTRICT ARC. INC.

The next meeting the mid monthly informal get together, will take place
on Tuesday 14th October, in the Mount Colah Community Centre, Pierre
Close, Mount Colah. (near the eastern entrance to the railway station.) at
8.00 pm.

The Club net is every monday night using the Club call sign VK2MA.
through the Club repeater VK2RNS., the frequency is 147.250 with a
positive offset, all are welcome to join the net, and listeners tune your
receivers to 147.250. Yes! we would like you to join the net, or come
along to one of our meetings, you will be most welcome.

If you woud like to know more about the Club, or its activities write to
HADARC, Post OFfice Box 362, Hornsby 22077., or phone John VK2WRT
on 9807 2490 again 9807 2490.

BROADCAST ROSTER

Next Sunday, 12th October, 1997

Morning:
Announcer: Tony VK2TJF
Engineer: Richard VK2SKY

Evening:
Announcer: Peter VK2CZX
Engineer: Colin VK2HCT

If you would like to submit a news item for inclusion in the VK2 Divisional

broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au (NB new address)

The deadline for submissions is 2pm on the Friday preceding the
broadcast; if sending by packet or Internet, please allow for forwarding
delays in the network.

If sending printed copy, please double space your text, leave wide
margins, and use a plain font such as Arial or Helvetica for clarity.
Please proofread your text, check your grammar and punctuation, avoid
using shorthand and abbreviations, and use the exact words you wish
the announcer to say on air. Remember, the more care you take in
preparing your news item, the better the announcer will read it.

I need to pull my copy of the Germany radio regs out before I post. However, I thought that 12 wpm was the standard.

We do need to simplify. Most old timers like the system that we had in states before incentive licensing. Two classes.

> And these were ham radio operators. And they'd say - can you believe
> it - 'I've got a friend in Nome, Alaska.'"

Staying in one's basement is a personal choice.

Ham rigs in general - have become smaller and more portable
in most regards since that time. I hike with a QRP rig in my pack.
When I get where I'm going - we'll call that "down time", I get to
do ham radio in a superbly awesome setting during a time in which
I would be rather sedentary anyway.

Amateur radio is by its very nature a sedentary "hobby," but much
of our lives is spent not moving anyway - driving, relaxing, etc.
And yes, even watching the TV.

When I'm out walking my 5 miles per day, I've got the HT with me.
In a few years, I'll hopefully be doing that walking with a 15m
or 10m SSB/CW HT, such as the AEA DX Handy that was so popular
back in the late 1980s. I am upset when I go for that walk
because I might be missing some juicy DX, but I still have to
do my walk because it's a part of my regimen.

Sedentary - or shall we call it stationary - time:

I drive to and from work once a day - about 20-30 minutes each way.
I try to have at least one good CW ragchew at 30-35 wpm on each leg,
if possible, as it's one of the only times I'm ever sitting "still,"
per se.

When doing errands, you make a 10 minute drive to the local
supermarket. That's a fair-length QSO, and certainly enough to
work a quick DX contact.

If you live in a valley, whoa, that's bad. If you drive down
into a valley, it's OK, you'll come out in a minute...and be
on a hilltop.

Life is only as "empty" as you let it be.

153. Ham radio & work ethics

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-03 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <612ug9$4eh$1@w3eax.umd.edu>
Source record: 189379

You earn what you work for.

Sometimes this means learning things you don't want to,
or don;t think you'll ever use.

If you don't want something badly enough to sacrifice
your desire to ONLY do those things you WANT to do, in
order to get what you want,

you probably don't deserve it.

If it wasn't worth sacrificing for, you didn't want it
that badly. It's YOUR decision.

I will sadly <<NEVER>> be a professional baseball player.
I wanted to, but damn, I had to be able to hit the
curve ball, and I just couldn't. Damn those liberals,
not having gotten to baseball and lowering the requirements
by banning curveballs so folks like me could play...

Engineering school, ham radio. Two things I'm good at,
and had to break my neck to learn. Had to learn about
lots of things I HATED to learn...like Dynamics, SSTV,
Thermodynamics, Assembly Language, and even RTTY.

But I wanted the payoff of each, and was willing to go
the extra mile to get them. So I did.

We live in a basically free society. We make most
of our own choices about life. We pick our friends,
we pick our noses. Contrary to popular belief, you
CAN (with approval) even pick your friend's nose.

We can move about at will. We can spend our time doing
basically what we want to so long as it's within
societal norms. We can work as hard as we want to, or
slack as much as we want to.

WE PAY THE PRICE OR REAP THE REWARDS ACCORDINGLY.

May this country never become a "something for nothing"
place. We sure as heck didn't get to be a powerful
nation with that ethic in place. Note that that seems
to be eroding daily.

HOW DOES THIS APPLY TO HAM RADIO?

If someone wants access to HF, there's CB. You want
a challenge? Get in there and clean up THAT mess. They
can use all the support you can muster, and then some.

Don't want to clean up the mess?

Wanna try Spread Spectrum? CB is a like the old west
with lots of <<NOISE>>. Besides, nobody will CARE.
Throw your signal in there - no laws, no requirements,
no petitions to the FCC...

If someone wants access UHF/VHF, there's GMRS, FRS,
and the no-code ham license.

They're all useful and fun. Limited, but available to
the general public.

Just IMHO.

Shortckt,

I have seen this transparent attempt to publicly
embarass Harry spammed here and across a number of
international forums and reflectors.

I don't know Harry, and I don't know where your radio
might be. My guess is that neither do the other tens of
thousands of hams worldwide who you have favored
with your ill-mannered postings.

Since you apparently have both his physical address and
electronic address, your electronic spam here seems not
intended to "find" Harry, but as a thinly-veiled attempt
to smear his name. Have you tried a simple telephone call?
It was no great trick for me to locate his phone number,
207-564-8301, which is publicly available on the internet.

Using the phone number I have provided above, you may
wish to call Harry to determine the status of the radio, and
at the same time apologize for your boorish behaviour here
on the internet.

If I were Harry, I might be tempted to consult my legal
advisor with a copy of your spam and determine if he
might be eligible for additional funds from you for
defamation on an international scale.

Hi Bob,

In the 10/97 QST a DSP program using a Creative Labs sound card is mentioned in the Digital Dimension column on page 97. Also an ad for the same product (DSP Blaster) on page 25. Unfortunately, this is evidently commercial software at $125, not the shareware you are looking for.

If you find less expensive shareware I for one would like to hear about it too.

The meanings of words are in us, Ed. Whatever anyone understands
when presented with words and phrases is what *they* make of them in
their own mind. What I may understand as descriptive only may to
others be highly offensive. But then again, this is why we
communicate, is it not, to understand the meanings?

If PMS[tm] is offensive to some, then it is. However, the intent
is not to insult, but rather to describe, albeit some might say
pejoratively, but in reality, with a light sense of sarcasm. "Your
mileage may vary," as it is said. But then again, one can't please
everybody or read minds -- in which case, meanings may never again be
a problem (or too much of one!).

Of course there exist blatantly obvious combinations that could
rarely, if ever, be mistaken for anything *but* an insult, in which
case the insult is most likely purposely intended. This is not that

case.

The one thing I find difficult with NGs is the 75% of communication lost through the absence of body language; smilies make up for some of that loss (when used), but don't do justice to the art of critically precise human communication.

>I must admit, though, that a good insult does occasionally help some of
>those who offer the insults feel better ...

Sometimes "bottling up" is not so good; in fact, the stress pressure could ultimately result in not a few silent keys. Good idea, Ed: Amateur Radio doesn't need additional unnecessary losses. =0)

First read the WSJ article (10-1-97). Second, the point was not about hobbies in general rather skills which society not longer needs. We do not need to hunt, fish, garden small plots or weave just to survive. Our society has moved on with better technology. But do we wish those skills to die out? I do not believe that it is in our cultures benefit to lose these skills. Plus those folks who practice these skills are a link to the past, living museums.

The same with Morse code. The WSJ point out those who are preserving code skills, not letting it die out. Even though other digital technics have replaced the code, I do not want to see the "oldest" digital mode die. CW is a part of my youth, of sweet memories. There will always be practitioners of this revered art.

> Wanna see something amazing? Morse is like a "secret code"
> to these kids. Have you ever seen a 10 year old learn
> something he/she WANTED to learn? It's truly amazing...

This is very true! Those of us who were lucky enough to have learned code when we were, well, prepubescent, had a different experience. Kids just have riper neural paths than adults! It's hard to absorb new stuff in quite the same way we did as kids, no matter how smart or diligent you are. This is certainly a frustration for adults learning CW.

As for the "secret" bit, that's another of the points that I take for granted but few anti-coders seem to get. I find it (and found it) fun for that reason, as do I continue to when I try to dig out a fluttery signal from Asia at the noise level on 40m at 2 in the morning!

No comment about *testing* in this post. It's a different issue. I'm just commenting on my enjoyment of CW, period.

But BEFORE (emphasis added) incentive licensing, only
three differnet sets of privaleges existed.

1. Novice

2. Tech

3. Conditional, General, Adanced and Extra all had exactly
the same privaledges, so the reality was that only three
license levels existed as there was no difference
between Conditional, General, Advanced and Extra

Ken:
It is sometimes difficult to find your way into the consoles. I have done the same sort of installation in a 94 Altima and a 95 Mazda Prodage. Each has its unique way of getting to it.
Look for a plate which is held by snaps which encompasses the shifter knob. See if it will just pop out. If not, then examine the very rear of the console. You may have to move the seats forward to do it. Check if there are screws which can be removed and then the console will come apart in pieces until you get the tray exposed.

Most of the car stereo installation outfits know how to get them apart and you may want to solicit some free advice from them. That's what I did.

Good luck and 73's....Dick, K7RNZ

FS: Kenwood TH79A dualband HT **Must sell**

Kenwood TH79A
(2) PB-32 batteries
(1) radio charger (dual charging bays)
(1) Kenwood soft case
(1) Kenwood speaker mic (with volume control and 3 programmable buttons)

Mod for extended Rx+Tx already.
Includes box and manuals.
Asking $325 US, I'll cover the shipping in Canada or USA.
Prepaid by money order only.

Email me if your interested. 73

169. Yeasu FT-50R Equipment

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-03 00:00:00 UTC
From: "Anup S. Jassal" <ajassal@idt.net>
Message-ID: <3435442B.29D5@idt.net>
Source record: 189395
Cross-posted to: alt.ham-radio.marketplace,alt.radio.scanner,rec.radio.cb,rec.radio.swap,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.misc

ALL THIS EQUIPMENT IS IN ITS BOX UNOPENED AND BRAND NEW
I ordered an extra set of this top of the line amateur radio
enthusiast equipment and need to get rid of this hardware before
Christmas :^)
I have all the accessories to connect the handheld equipment to your
PC and program it, connect it to your car (cb style), or go mobile with
it. You'll love this stuff!

I. Yaesu FT-50R PC Programmable Handheld Transceiver

Wide Multi-band Receive 76-200, 300-540, 800-999 MHz
3-Selectable Rx modes (AM and Daul FM [FM-Narrow, FM-Standard])
5/2.5W Ultra Compact Construction
Rugged MIL Spec MIL-STD 810 Rated for Shock and Vibration
Auto Range Transpond SystemTM (ARTS) uses DCS to automatically
poll
other stations, indicating if they are within simplex range.
Digital Coded Squelch (DCS) is used in the commercial industry,
DCS
provides 113 unique codes in addition to the standard CTCSS tones.
112 Memory Channels each stores offset, CTCSS/DCS Encodement &
power
level.
Alpha-Numeric Display up to 4 characters may be used to name
each
memory channel.
Digital DC Voltage Display monitors current battery voltage.
MARS/CAP Modifiable with proof of permits.112 Channels
5/2.5W Ultra Compact Rugged MIL Spec Modular Construction
Full 5 Watts Power Output at DC 9.6V with 4 selectable power
levels
RX/TX Battery Savers
Direct FM for Better Voice Clarity
Alphanumeric Display
Unique Water Resistant Clam Shell Design Permits Rear Mount
Battery
Digital Voice Recording System
Check the Yaesu Site, http://www.yaesu.com/ft50.html
for specifications link on this great product

II. Yeasu Rubber Case Protector Fitting FT-50R

III. Yaesu ADMS-1c Advanced Data Management System

3.5" HD Diskette with Windows PC Program
Serial Interface Cable to Connect to a 9-pin Port
Allows Keyboard and Menu Programming for FT-50R

IV. Yaesu Cigarette Lighter Adapter

V. Yaesu Voice VOX Headset (2way)

VI. Yaesu FNB-42 Ni-Cd Battery

DC 9.6 V 1100 mAh

VII. Yeasu CN-3 Antenna Adapter

BNA to SMA Adapter

VIII. Diamond K-601M Antenna

UHF Hideway trunk Mount
6 ft. Teflon Coax PL-259 Adapter

IX. and X. Maxon 49 49 MHz Two Radio (Quantity 2)

Portable FM Transceiver
Offers VOX Voice Activated Command or Standard Push to Talk
Unique RX/TX Signal Through In Ear Microphone

If You are interested in this equipment, please make sure to reply
via e-mail, as my ISP has a pretty shoddy newsfeed. Thank you.

Regards,
Anup

170. Small + handy program, Address, can fill, read, and organise a database.

Small + handy program, Address, can fill, read, and organise a
database. You can use it for any topics such as books, customers,
music, car, cd, parts, clients, etc... and makes as many different
databases as you like.
The extended search possibility of the program makes it suitable for
any application where many items need to be ordained and found in a
few seconds.
This program gives you the way to manage your collection of items
whatever their topic. This without the complication of big database
programs. You can start without any specific knowledge on the subject.
you just need a mouse... and visit:

http://www.xs4all.nl/~bernard/adhome_e.html

see you there,

>
> Wanna try Spread Spectrum? CB is a like the old west
> with lots of <<NOISE>>. Besides, nobody will CARE.
> Throw your signal in there - no laws, no requirements,
> no petitions to the FCC...

Excuse me ... but while SS is severely and unduly restricted
in the ham bands, it is TOTALLY illegal on CB, where only
type-accepted equipment is permitted ...

Source record: 189402

>>From an interview by Elisabeth Bumiller, The New York Times, with
>>Kurt Vonnegut.
>> Technology, Vonnegut says, is creating "people who are being cheated
>> out of life as human beings." He adds that "when I was a kid in
>> Indiana, there were people with very poor complexions and not very
>> popular who spent all their time in the attic or in the basement.
>> And these were ham radio operators. And they'd say - can you believe
>> it - 'I've got a friend in Nome, Alaska.'"

Personally, Mr. Vonnegut can have his own opinion, but I think
he's a pompass ass to suggest that there's some degree of social
interaction that everyone must subscribe to or be castigated as
he does above. Reminds me of a sixth grade teacher I had that
belived my interest in model trains, fostered by gifts from parents
and friends, was wrong and that he'd never get his kids anything
but stuff like sporting equipment, bikes, etc.

You'd think people could accept that there's many different ways
we all approach life and there's no set standard of behavior
that al must buy into to be viable, productive humans. My only
desire for standards is a wish that everyone followed the 10
commandments (or the approximate equivalent found in almost
all the worlds religions. That and the basic common sense of
following the golden rule.

Not meant as a religious sermon, just my view of live and let live.

I am not surprised that you find the idea of sending people death
threats to be "funny" JJ ... after all, you are a pro-coder and
most pro-coders believe that *anything* is acceptable if one is
"defending the faith."

However the cretin's rocketmail account is toast and his ISP
in Minnesota has copies of the files and assures me that his
account there will be toast as well ...

I expect that the FBI will be calling on the cretin within the week.

After *I* find out who he is, if he is a ham, I will file a petition with
the FCC requesting that they issue a "Show Cause Order" as to
why his license(s) (including any commercial licenses he may hold)
should not be permanently revoked on the basis by violating the laws
prohibiting such actions he has demonstrated that he is unsuitable to
be a Commission licensee ...

I hope you find this equally humorous ...

Of the 27% responding in the affirmative to using OOK regularly, what %
would you "guess" gave the standard "expected" "Yes I do, All the time"
answere? I have seen these polls taken in every situation known to man,
and it never fails that some give the proposed "like to have" response.
The numbers as I recall were in the 4 to 7 per cent. 4% of the 27%
isn't too many I guess but I will bet a used set of horse shoes 27% is
high for the question.

> Seems to me...I wonder...

Don't wonder too far ... you might get lost (at least that's what my
Mom used to say, when, as a kid, I would say "I wonder?")

> That is YOUR OPINION not a fact Carl. The fact that you find it a bore
> and a complete waste of time doesn't mean everyone does.

I stand corrected ... I should have qualified that with a "most" ... I
fully realize that some percentage, no matter how small, of folks
of any age and technical skill will find Morse enjoyable ... that is
still not a valid reason to force it on everyone ...

> > Read my words ... that is NOT what I said ... I said it was an
> > unnecessary, irrelevant waste of time and should not be forced

> must I understand the theory behind beam antennas, I just want to use
> dipoles? Beams are boring and a waste of time. The list goes on and on
> as to what each person finds boring and a waste of time.

The reason is that ham radio is *supposed* to be technically oriented
for the purpose of experimentation, self-teaching, etc. ... read BOTH the
ITU definition and FCC Part 97.1 ...

> > > I can
> > > -only assume you feel the same way about the rest of
> > > -the testing, eh?
> >

> > Quite the contrary ... I have advocated both better theory
> > tests and also retesting for technical currency at renewal time.
>
> Why? It is boring and a waste of time. If I need to know it I can look
> it up.

You need to know it before you can convince the government that
you can operate safely, without causing interference to other services,
and in compliance with the rules ...

> > > If not, then you have a totally inexplicable
> > > -double standard.
> >

> Yea right. You must not listen to the advanced/extra bands on HF much
> then.

Read what I said above ...

> > "and that
> > theory tests need to be made more meaningful to ensure that
> > those who DO get licenses are truly qualified to a reasonable
> > technical standard for the privs that the license grants ..."

I HAVE listened to the advanced/extra bands on HF ... MANY of the
occupants there of couldn't find their asses with a map, compass, and
flashlight, technically speaking, at least ... in some cases in a more
general sense ...

That's why I've maintained that the testing and the license structure
need to be updated and fixed ...

> > > and they will enjoy all that ham radio has
> > > -to offer (yeah, right).
> >
> > Wrong ... no-code techs do NOT "enjoy all that ham radio

> > class citizens in our community and scorned and reviled as
> > "refugees from CB" by many others ...
>
>
> Who are you to speak for no-code techs?

By definition, "no-code techs do NOT enjoy all that ham radio has to
offer" ... they are PROHIBITED by antiquated rules from doing so ...

> Admit it Carl, code is boring to you because you are too lazy or
> something to learn it.

Correction ... I learned the code many years ago ... I used it
extensively for many, many months and became reasonably proficient
(far more than 5 wpm), but before I got around to taking the 13wpm
test, I moved because of a job change and my gear was in storage
for several months ... in the meantime, I upgraded to Tech by taking
both the 5 wpm code test (again, due to a snafu at the FCC) and the
full General written at the FCC office ...

Point is I am not speaking as one who "hasn't given Morse a chance ...
I did ... and I didn't like it, found it boring, found it tedious to use, and
very lacking in the ability to support a meaningful QSO with decent
content in any semblance of "real time" ... even at speeds (at my
peak) approaching about 20 wpm (for typical QSO exchange stuff)

In other words, I heard "the" "rig" and many commonly-used words
as words in my head, not as t-h-e and r-i-g ... and it STILL was
boring and unsatisfying because it was such a backward, tortured
way of trying to communicate ... totally void of any personality,
voice queues, etc. ... and so much slower than keyboard modes
for sending text that it was ridiculous ...

> If posted one less message and spent that time on
> CW you would have learned the code by now.

See above ...

> The most common thread of
> your no-code argument is it is boring and a waste of time. A very
> telling opinion but not hardly a fact.

It's a fact to me ... and thousands and thousands of others ...
in fact, it's *apparently* boring to the large majority of already
code-tested HF hams ... since only 27% use it "regularly"
with the remainder about equally divided between "rarely" and
"never." (ARRL's numbers, not mine)

> by what percentage.

I would be strongly inclined to believe that the ARRL "survey" was
biased in favor of increasing the percentage of Morse users relative
to the vast majority of amateurs who are NOT ARRL members ...
in other words, I believe that the ARRL "survey" was probably
biased to select "for" Morse ... the fact that the number (27%)
who said they use Morse "regularly" was so small was probably
a major embarrassment to the ARRL ...

> Hey, I can be anal too if I want to be.

Your sexual preferences are none of my business and, to be blunt,
you just told us more than *I* wanted to know ...

I a very special project I need a big 125 Ohm dummyload wich can handle at least 6 KW from 1-30 MHz.

My plan is to use 8 pc of Carbon composite resistors rated 1KOhm - 200W in free air and store them in oil with a water cooling system.

Anybody know where to buy the resistors - or maybe an better idea?

Best 73 de OZ2Q

Greetings All!

This latest delusion of Carl's has to be the most amusing thing I've seen him post to date. The one thing I'm absolutely sure of is this: he DID NOT receive any kind of death threat! All he's trying to do is to intimidate his opposition by making them think that anything said against him (Carl) would/could be construed as having come from whomever the alleged "death threat" person is.

Pro-code "radicals" my ass! I'm sure the one thing we'll never get from Carl is any kind of irrefutable proof that this ever happened!

Carl: send me a copy of the E-mail you received to my callbook address! I have absolutely no doubt that you will not do this! Why? Because you can't! You really *are* pathetic!

Marc,

Don't know about the 94, but my FT5100 fit just wonderfully in the dash. I removed the
ashtray(I don't smoke) and made a couple of small brackets for it. Radio sat flush and
worked great for over 4 years. The car was a 1990 Z-24.

I am interested in finding construction plans for building a G5RV 10-80 meter version and 10-40 meter version. I realize it is a simple antenna but I have been unable to find any information on how to actually build one. Even the ARRL Antenna Book does not give this information. If anyone can e-mail this to me, I would be very grateful.

What are fair prices to pay for the following?

2 Meter Kenwood TH-205AT Charger, antenna, extra microphone, 2 batteries.

2 Meter Realistic HTX-202 Charger, antenna, extra microphone, 2 batteries.

10 Meter Realistic "mobile" type radio. Has preamp.

Thanks! 73, DavidC AA1FA

204. This Week in Amateur Radio #236 (for airing through 10/10/97)

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #236 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 10-Oct:
-
1. FCC Offers On-line License Renewal with Form 900
2. ARRL Seeks Changes to Morse Code Waiver Procedures
3. Ariane 502 Launch Delayed, Too Late for Phase 3D Payload
4. Audio Clip-Astronauts Comment on Ham Radio, Station Seen on TV
5. Doug DeMaw, W1FB, SK, the Dean of Amateur Radio Tech Writers
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. "The RAIN Dial-up" from Chicago
8. Special Event Station Calendar
9. "Tower Climbing Safety" with Greg Stoddard, KF9MP
10. Weekly Propagation Forecast
-
Funding for the program's transmission and production expense was
provided this week by a grant from users of the N9SBH repeater
system, serving Goshen, Warsaw, Plymouth, and North Webster,
Indiana, on 224.16 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
Roanoke, VA. A separate "RealAudio" file is also available at this
site. The service is carried on VHF/UHF repeaters throughout North
America and by WA0RCR on 160 meters at 1860 kHz.
-
Here in the Capital District, "This Week in Amateur Radio" is heard
on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz,
```

courtesy of the Niagara-Mohawk Amateur Radio Club. The program is repeated Mondays at 8:00 PM.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

>There will always be practitioners of this revered art.

Greg:

I have to admit that I cringe when I hear CW referred to in terms of
"sweet memories." It is a currently viable, emminently practical,
and always effective means of simple electronic communication.
That is the reason to keep this skill alive with the status quo code
requirements. I have sweet memories of hunting and fishing, but
I wouldn't want to have to depend on it to survive anymore. Nor
would I give up my high-speed digital capabilities as a radio ham.
The point is to keep the code because we need it -- it represents
a current and relevant capability.

>
>You blow everything out of proportion. Next thing you'll be accusing
>me of being an accessory after the fact because I didn't post a
>sympathetic response. I think you're all talk anyway and will just
>leave it at that.

JJ:

The one thing I'm sure about Carl's so-called "death threat" is this --
it never happened! This is the easiest thing one can do to in an
attempt to intimidate his competition -- and he doesn't have to provide
one iota of "evidence" proving his claims of having received such
"threats." I can say anyone from anywhere "threatened" me via
E-mail, and nobody could prove it or disprove it! So, considering
Carl's overall credibility (which is zero), this threat does not exist.
If it did, how come none of the other "no-coders" have received a
similar threat? Or is it that Carl is the only one reporting the
receipt of such a threat? Why would he do that? I, personally,
would handle the whole matter quietly in the background, rather than
allowing the perpetrator time to destroy the evidence.

Things that make you go "Hmmmmmm..."

You got me beat. I had the same with two thats why I figure to do it myself. I know the earlier models had problems with either the PL & DTMF tones and there is an adjustment for both but I just don't remember where it was.

First, let me state that I am NOT posting this because
I feel I have to "justify" myself to assholes like Yo Doc ...
hell would certainly freeze over before I'd feel any need
for that ...

This is for those who might not be familiar with Yo Doc's
fanatical bent and might accidentally take him seriously ...

Here is the response I got from one of the ISPs involved
(indirectly, because their service was used in violation
of federal laws and their own policies/user agreements)
in the recent threatening messages, along with a copy of
one of the offending messages:

Received: from web2.rocketmail.com (web2.rocketmail.com [205.180.57.68])

Nope, but then neither does the Oregon Scientific unit which costs
twice as much ($80 at Service Merchandise) to two and a half times as
much ($100 at Sharper Image stores).

BTW, I sent e-mail to Oregon Scientific asking if they had a model
with 24 hour display in GMT, which seems like it'd be a popular
option. They said that they didn't offer this as yet, but were
considering it.

>I am interested in finding construction plans for building a G5RV >10-80 meter version and 10-40 meter version.

Dear Jim,

Visit the Web page that has all the poop on G5RV's - it's worth the visit.

www.geocities.com/CapeCanaveral/8476
by W6RCA. It's very interesting and informative.

I've not heard of a design specific to 40 M. There was an article recently by N4PC in October issue of CQ Magazine that shows a 178 foot long Center Fed Zepp for 40M, and he refers to a "double G5RV", whatever that is. I don't know whether G5RV had anything to do with such an antenna or would even acknowledge it. So far as I'm concerned, the standard G5RV is OK on 40M, so why mess with the design?

You can build a G5RV for less than the commercially built ones. Start with exactly 102 feet of flat-top, overall. Use solid or stranded, insulated or insulated wire - it doesn't matter. It only has to be of heavy enough gauge to keep from breaking, so in the inverted vee configuration it can be very skinny. Feed it with ordinary 450 ohm ladder line of length = 29 to 31 feet. Considerable confusion exits on what is the prescribed length of the balanced part of the feed line. I don't think you'll see any big difference over that two foot range, but I would start with 31 feet and trim it if you get convinced that it could be improved upon. Terminate that with a simple Center Insulator device made of PVC which gives the ladder line some screw terminals to fasten to and provides the necessary PL-259 coax fitting on its bottom. Connect your coax (of length adequate to reach into the shack to your equipment) to this device and get on the air. The coax canl see some healthy SWR's, so use something that can handle your power levels. I have used RG-8 at the legal limit, but I start to worry if I see the SWR on the line getting up to 3:1, and you should too. Some coax is not made with its center conductor in the center, so it may break down at lower than advertised voltages. I am also told that the PL-259 connectors can't take as much voltage as the coax itself.

If you have plenty of extra coax, it won't hurt to put a coil of about 8" to 10" diameter (give it 8 to 10 turns - not critical) hanging close to the point of connection with the balanced line.. That will help reduce RF current flowing on the outside of the shield braid. The commercially made units will sometimes place a string of ferrite beads over the coax at this point instead of the choke coil.

You may get conflicting suggestions, but keep this in mind - the G5RV was designed for 20 M. Anything you want to do to tweak it for some other band is up to you. IT'S NOT CAST IN CONCRETE, and it's not sacred. It's more important to get the part of the antenna with the high current (low impedance) up as high as possible than anything else.

>time!

Actually, no, it has to have nonlinearity to act as a mixer. It gets that
when it switches, via beam deflection, from one plate to the other.
The switching is not instantaneous, it takes a finite time to sweep
the beam from one plate to the other (which is proportional to the
voltages applied to the deflection electrodes). This is analogous to
the turn on/turn off time of the diodes in a diode ring mixer, the
harder you drive it, the quicker it switches. As the beam sweeps
off one plate, across the gap, and onto the other plate, you get the
familiar square law response (the beam has a finite spot size).

There is an example of using this tube as a balanced modulator
in the 1963 ARRL Handbook, pp 307-311. It does carrier
oscillator duty using cathode, control grid, and screen in a
Pierce circuit, and the portion of the beam passing through
the screen is then switched between the two plates via audio
introduced on the deflection electrodes, producing DSB in
the balanced tank circuit. In this design, that signal is then
link coupled to a McCoy 9 Mc crystal filter to produce SSB.

After a fashion, you might consider this a tube integrated
circuit since it combines different functions in the same
envelope.

Well, suppose he did know I*L = Q*v (I and v being vectors) which is the
fundamental antenna equation, and suppose he did grasp the concept of an
antenna with two electrical poles. He may still have wanted some practical
construction details.

>Once you have that out of the way ... explain how this relates to the code
>requirement?

Perhaps he had spent all his time practicing code and hadn't spent it studying
antenna theory. Unlike the code element, antenna theory isn't a separate
pass/fail exam element.

Crap. You went public to promote your agenda, to make yourself look
like a victim, and perhaps to provoke another such attack so you can
repeat the process.

At the very least, you have given the perp some attention, which is
what he wanted. And you have given the whole world a good idea of
just what it is that pulls your chain, and how much time and effort
you'll expend chasing a threat that exists more in your head than in
reality. As a bonus, you've cost several ISPs and the Federal
government (and by extension the customers and taxpayers) time and
money that might have been better spent on real problems.

And all because you don't have the civility to keep your arguments
focused on the issues, rather than on personalities.

It's enough to make a person think twice about supporting the
elimination of CW as a licensing requirement.

Hector,

There are two potentiometers on the back of the touch tone pad PCB. One of them adjusts the CTCSS tone level and the other the DTMF tone level. I don't recall where I found this information but I did find it on the net doing a search for HTX-404. If you are not comfortable disassembing your radio then I would not recommend this. I did disassemble mine and and verified that they are adjustable.

Two classes of license?
Hmmm, they're not the facts I have!
Prior to incentive licensing, there were 5 classes of license:
Novice
Technician
Conditional
General
Advanced (no new licensees, but current holders could renew)
Extra

Well, okay, six classes counting the Conditional.
There are a number of publications which detail the amateur radio landscape
prior to November 22, 1967.

Bob:

I assume that you desire to do real time audio signal
conditioning and am not aware of software to accomplish this
task, however, AF9Y offers a package to perform frequency
analysis of an audio signal at:

http://www.webcom.com/af9y/

... along this same line, I maintain a small listing of
electrical/electronic related share/freeware which may be of
interest to you at:

http://www.iserv.net/~alexx/lib/general.htm#SOFTWARE

This has to be the best Carl and his no-code bunch have come up with yet,
1. CW is not used
2. Dont have time to learn it
3. Military doesnt use it
4. Better ways using Digital
5. Big Bussiness is going to take our Freqs because CW is keeping us
from getting Millions of new Ops
6. And the best so far Carl is seeing Pictures of Guns on his
Monitor
These all sound like Great Ideas for getting Rid of CW.

232. DX.BAS Propagation Program

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-04 00:00:00 UTC
From: whitener@hiwaay.net
Message-ID: <GIn7giN08GA.185@newstoo.hiwaay.net>
Source record: 189317

Greetings,

I am trying to locate a source for the shareware program DX.BAS, a BASIC language propagation program discussed in George Jacobs' "The New Shortwave Progagation Handbook". I have not been able to find this program at any FTP site using any search skills that I might have, and repeated attempts to contact the author of the program have not been successful.

Can anyone direct me to a source where I can download the program, or perhaps would any of you have a copy of the program that you could forward to me as an e-mail attachment? Any assistance would be greatly appreciated.

73,
Don Whitener, K4BWU

JJ ... I haven't blown anything out of proportion ... I could give a rat's
ass if *you* believe that I received these messages ... or if you care.
The ISPs involved have confirmed that the headers were valid and
have cancelled the accounts used by the perpetrator ... the FBI has
begun its investigation ... and I fully intend to prosecute to the fullest
extent of the law ...

If you don't like it, that's too damned bad ...

That's a bold statement, Yo Doc ...

> This is the easiest thing one can do to in an
> attempt to intimidate his competition -- and he doesn't have to provide
> one iota of "evidence" proving his claims of having received such
> "threats."

The last time I checked, this is not a court of law ... and you
most certainly are NOT a 'judge." The evidence, as I said,
is in the hands of the ISPs involved and the FBI ... they are
the ones who need proof to do their jobs ...

> I can say anyone from anywhere "threatened" me via
> E-mail, and nobody could prove it or disprove it!

Actually, it's fairly easy to determine the origin of certain
things, when and where they were sent from, the real
originating address, etc. if you have access to all of the
account logs ... as the ISPs involved did ...

> So, considering
> Carl's overall credibility (which is zero),

Talk about the pot calling the kettle black! ROTFLMAO

> this threat does not exist.

You pro-coders deny all SORTS of reality, don't you ???

> If it did, how come none of the other "no-coders" have received a
> similar threat?

I admit to being one of the more brash ... perhaps even the *most*
brash of the vocal no-code-TEST crowd ... hell, Yo Doc ... *YOU*
were absolutely BALLISTIC with me the other day when I "dissed"
your religious icon Vic Clark ... maybe *YOU* are the "perp" ...
though I doubt that you have ISP account in Minnesota ...

> Or is it that Carl is the only one reporting the
> receipt of such a threat?

Perhaps I am the only one who irritated the cretin enough ...

> Why would he do that? I, personally,
> would handle the whole matter quietly in the background, rather than
> allowing the perpetrator time to destroy the evidence.

Actually, I waited until the relevant ISPs and the FBI had all of the evidence
in their hands and were well aware of the situation and cooperating.
All of the message headers are intact and can be cross-checked against
the ISPs account logs and other records to verify everything ... and the
"perp" no longer has access to those accounts ... so, you see, the evidence
is QUITE secure ...

The reason I "went public" with this is just to show those who may be "on
the fence" just how far-out radical, fanatical, and desperate the extreme
pro-coders like you really are, Yo Doc ...

> Things that make you go "Hmmmmmm..."

What's the matter Yo Doc??? Don't you know the words?

Please forgive me if there is a FAQ on this question; I looked and couldn't find one.

I'm an advanced and want to get in on the new vanity gate. I've got a very definite idea of the last three letters (after the number) that I want, and couldn't care less about the prefix (K, W, A, N) that I get OR the number that I get.

I know about the callsign web page where you can look up any call and see if it is currently assigned, but it doesn't tell me whether it is currently ASSIGNABLE. (i.e. whether it has been abandoned the requisite number of years).

Is there any place I can go look up a call to see if it is ASSIGNABLE at this time?

Jim

Jim,

You can call the FCC Consumer Information Line, 1-800-CALL-FCC and they will look up a total of 5 calls and let you know if they are available. When the machine answers, stay on the line and wait for one of their representatives.

The second thing you can do is use your 2 year old callbook or CD-ROM. If the call isn't listed in the 2 year old version and is not currently assigned (using one of the current callsign servers) you can pretty much be assured the call is available (provided someone else already in the queue isn't requesting the same.) This worked in all of my cases as the FCC confirmed all of the calls not presently assigned and NOT listed in the 2 year old version WERE available.

Hope this helps. BTW, are you the Jim Weir involved in avionics?

Source record: 189324

I'm looking for a mod (just to receive out of band) for the Alinco DJ S41 (as it is called in Europe). Probably also known as the Alinco EC-10 (at least, in Europe), which is the LPD (Low Power Device, erp < 10mW) version.

BTW: The DJ S41 is a small (cigarette-package size) handheld for the 70 cm band, erp low = 50mW, erp high=420mW (at 5.5 VDC).

Greetings,

Rene Altena

From: jeff@DeTray.com
Message-ID: <61618j$cj6$1@news.monad.net>
Source record: 189326

Hello,

I'm looking for some information about exchanging messages between amateur radio and the Internet. I'm a radio amateur, licensed for 30 years, began using packet very early in the game, but I am not familiar with the current state of the art.

Here's the story.

A non-ham friend has a son who is in rural Bolivia, helping the local people with education and health care. The son has access to an HF ham station there. The non-ham father has Internet access here in the USA.

What would it take for the two of them to be able to exchange e-mail messages? The son would send and receive messages via ham radio, and the father would send and receive using his regular e-mail account.

How do they accomplish this? What equipment will be needed at the ham radio end of the link?

Thanks for any assistance you can provide. I will check this newsgroup, but e-mail responses will be especially appreciated.

I would prefer Win95b/OSR2 but will consider Win95a

Must be fully legal, either in original packing or accompanied by a signed letter stating that it is not in use on any other PC. Must include Microsoft certification of authenticity and, of course, product ID for installation.

I paid $40. for my current copy, so the price needs to be close to that or less. Thanks!

>> I think I am missing something here. I thought the SBE-33 was the first
>> all solid state transceiver, not tube. I believe the SBE-34 was also
>> all solid state.

No... the SB33 and the SB34 are nearly identical in terms of circuit design. There are two main differences. The SB34 includes both 117VAC and 12VDC power supplies while the SB33 includes only the 117VAC supply (the 12VDC was an external option). Also, the SB33 was constructed using 1950's techniques (transistors socketed as if they were tubes and point-to-point hand soldered wireing) while the SB34 was constructed mainly on printed circuit cards.

I happen to own a functioning SB33, The good news is that I also have the manual for it. The bad news is that it's currently stored in another state, so I can't easily get a copy.

If the problem is a need to shift the specific frequency coverage of a specific band, it's a matter of identifying the crystals for the 1st converter and replacing the appropriate crystal with one for the desired range. There is no need to worry about damageing a crystal filter by mistake, the SB33/34 has no crystal filter = it uses a Collins mechanical filter which looks NOTHING like a crystal!

Good luck! - Seventy Trees - Glenn wb6w

For what it's worth, I showed copies of Carls' post to a close friend associated with the FBI, and lives in Morris County. According to him, there is absolutely no way, other than from an UNOFFICAL position, that the FBI would ever get involved in this case, unless Carl were a public official. He will be checking with the FBI office that covers Carl location, but "it is HIGHLY doubtful, that ANY government agency will expend any of its money chasing all these supposed threats/slanders/libels, etc etc, etc. The Internet, by its very nature allows people to assume the identity of others. There is no rational way to prove that (1) the complainant truly received the alleged message and (2)that the alleged sender is in fact not an someone entirely different.

Personally, I think this posting has no place here and quite frankly IMNSHO, think this posting is on the same level as the alleged and never verified letter to Carl from an ARRL director.

Email, electronic commerce, mailing lists, it doesn't make any difference
what you call it, this is a chain letter pyramid scheme, and is a scam.
Probably illegal also.

Frocki Chan <frocki@netvigator.com> wrote in article
<3437024C.1CD5@netvigator.com>...
> DO YOU WANT TO MAKE MONEY FAST???

Here's what one man says:

A little
while back, I was browsing these newsgroups, just like you
are now, and
came across an article similar to this that said you
couldmake thousands of
dollars within weeks with only an initial
investment of $5.00! So I
thought, "Yeah, right, this must be a scam!",
like most of us, but I was
curious, like most of us, so I kept reading.
Anyway, is said that you send
$1.00 to each of the 5 names and addresses
stated in the article. You then
place your own name and address at the
bottom of the list at #5, and post
the article to at least 200
newsgroups.(There are about 22,000.) No catch,
that was it.

So after thinking it over, I spoke to my attorney, a few
friends, and
family about it and they all agreed it was some kind of scam.
After
rejecting the idea at first, it kind of played on my mind and I
thought, "What if it really worked??". I figured what have I got to lose
except 5 stamps and $5.00, right? And I decided to give it a shot.

Then I
invested the measly $5.00........

Well GUESS WHAT!!... within 7 days, I
started getting money in the
mail! I was shocked! I still figured it would
end soon, and didn't give
it another thought. But the money just continued
coming in. In my first

week, I made about $20.00 to $30.00 dollars. By the
end of the second
week I had a mad total of $1,000.00!!!!!! In the third
week I had over
$10,000.00 and it was still growing. This is now my fourth
week and I
have made a total of just over $42,000.00 and it's still coming
in.....

It certainly worth $5.00 and 5 stamps, I spent a lot more than
that on
the lottery!!

Let me tell you how this works, and most
importantly, Why it
works..... Also, make sure you print a copy of this
article now, so you
can get the information off of it when you need it. The
process is very
simple and consists of 3 easy steps:

STEP 1:
Get 5
separate pieces of paper and write the following on each
piece of paper
"PLEASE ADD ME TO YOUR MAILING LIST. $1US DOLLAR
PROCESSING FEE IN
ENCLOSED." (This makes it legal since you are paying
for a service). Now
get 5 $1.00 bills and place ONE inside EACH of the 5
pieces of paper so the
bill will not be seen through the envelope to
prevent theft/robbery. Then,
place one paper in each of the 5 envelopes
and seal them. You should now
have 5 sealed envelopes,
each with a piece of paper stating the above
phrase and a $1.00 bill. DO
THIS STEP FIRST, AS THESE MESSAGES ARE BEING
MONITORED.

Mail the 5 envelopes by standard mail to the following
addresses:

1. J Bahista
281 n Livingston ave
Livingston. nj
07039 USA

2. Kevin Edwards
Box 1874
Post Office

Coffs Harbour
N.S.W. 2450 Australia

3. CA
P.O. Box 550885
Jacksonville, FL,
32255
USA

4.Bosko Schneider
Nazorova 56
10000 Zagreb
HRVATSKA
5.Frocki Chan
Flat B, 16/F
Golden Hill Commercial Building,
39-41
Argyle Street,
Kowloon, Hong Kong

STEP 2:
Now take the 1st name off the
above list, move the other names
up(so #5 becomes #4, #4 becomes #3, and so
on..) and add YOUR name and
address as #5 on the list.(If you want to
remain anonymous, put a
nickname, but the address MUST be correct. It, of
course, MUST contain
your country, state/district/area, zip code, etc,
because there are
some people who don't put their COUNTRY!!! You wouldn't
want your money
to fly away, wouldn't you?!?!).

STEP 3:
Now post your
amended article to AT LEAST 200 NEWSGROUPS.
Remember, 200 POSTINGS IS A
MINIMUM. THE MORE YOU POST, THE MORE
MONEY YOU MAKE!!!!! SO TRY TO POST TO
AS MANY GROUPS AS POSSIBLE. Try to
post to groups that get a lot of traffic
as more people will view your
message. Don't know how to post? Don't worry,
I'm explaining that in an
extra section at the end of the letter.

Now the
Why part:

Out of 200 postings, let's say I receive only 5 replies(a very
low
example). So then I make $5.00, with my name at #5 on the list. Now,
each of the 5 persons who just sent me $1.00, makes the MINIMUM 200
postings, each with my name at #4 and only 5 persons respond to each
of the
original 5. So that's another $25.00 for me. Now, each one of
those 25
makes the MINIMUM 200 postings with my name at #3, and each one
gets only 5
replies. Now I make an additional $125.00! Now these 125
persons, turn
around and post the MINIMUM 200 postings, each with my
name at #2 and only
receive 5 replies each. Now I have an additional
$625.00!! OK, now here's
the fun part, each of these 625 persons will
post the MINIMUM 200 postings
with my name at #1 and they receive only 5
replies each. So, that just made
me an additional $3,125.00!!! With an
initial investment of only $5.00!
AMAZING! And as I said 5 responses
each is actually VERY LOW! The average
is probable 20 to 30! So let's
put those figures at just 15 responses per
person. here is what you will
make:

at #5 $5.00

at #4
$225.00 (15 times $5.00)

at #3 $3,375.00 (15 times $225.00)

at #2 $50,625.00 (15 times $3,375.00)

at #1 $759,375.00 (15
times $50,625.00) +

$813,605.00

LEGAL ? ? ? (Comments from Bob Novak who
started this new version.)

"People have asked me if this is really legal.
Well, it is! You are
using the Internet to advertise you business. What is
that business?
You are assembling a mailing list of people who are
interested in home
based computer and online business and methods of

generating income at
home. Remember, people send you a small fee to be
added to your mailing
list. It is legal. what will you do with your list of
thousands of
names? That's up to you."

So, build your mailing list,
keep good accounts, declare the income
and pay your taxes. By doing this
you prove your business intentions.
Keep an eye on the newsgroups and when
the cash has stopped coming(that
means your name is no longer on the list),
you just take the latest
posting at the newsgroups, send another $5.00 to
the names stated on the
list, make your corrections(put your name at #5)
and start posting
again.

Some people have asked me "What happens if the
scheme is played out
and noone sends money anymore?". Big deal, so you lose
$5.00, BUT... do
you know the chances of that happening??? Since this is a
brand new
program as of January 1st, 1997, you are on the ground floor!
There are
millions of Internet users, and millions of new net surfers every
month!
The Internet is growing in a tremendous rate - it doubles in size
every
4 months!!! Think about it. All that growth means profits for
everyone
who participates. There are no losers! Let's review why you should
do
this. The only cost is $5.00, 5 stamps and 5 envelopes. Anyone can
afford this with such SPECTACULAR returns. There really is no risk - eat
cheaper lunches for a week and you've covered the $5.00. The biggest
risk
is not to try.

Remember, play fairly and honestly and this will work. Make
sure you
print this article now, also.(If you don't have a printer, copy it
to
your Hard Drive.) Keep an eye on the newsgroups to make sure that
everyone is playing fairly. You know where your name should be.
Remember,
honesty is the best policy. You don't need to cheat the

basic idea to make
the money. By the way, if you don't send the $5.00 to
the stated names, you
won't receive as much. Someone I talked to, knew
someone who did that and
he only made about $150.00, and that's after
7-8 weeks! Then he sent the 5
$1.00 bills, people added him to their
mailing lists, and he had the
expected amount of money. This is the
fairest and the most honest way I've
ever seen to share the wealth of
the world with costing nothing but our
time!!! This is the easiest way
you can make money, and I mean good money!
Think how excited will you be
to open your mailbox every day! So, GOOD LUCK
to all of you and start
making your plans, because it can(and it will!)
happen to you.

NOTES:

*1. In some countries, the export of the country's
exchange is
illegal.But you can get the license to do this from the post
office,
explaining the above statemenets(that you have an online business,
etc...). You
may have to pay an extra tax, but that's OK, the amount of the
incoming
money is HUGE! And as I said, a few countries have that
restriction.
*2. You may want to buy mailing and e-mail lists for future
dollars.(Or Database or Spreadsheet software.)
*3. If you're really not
sure or still think this can't be for real,
please print a copy of this
article and pass it along to someone who
really needs the money, and see
what happens.
*4. You will start getting responses within 1-2 weeks, it
depends.

HOW TO POST TO NEWSGROUPS FAST WITH YOUR WEB BROWSER:

The fastest way to post a newsletter:

Highlight and COPY(Ctrl-C) the text
of this posted message and
PASTE(Ctrl-V) it into a plain text editor(as

Wordpad) and save it.
After you have made the necessary changes that are
stated above,
simply
COPY(Ctrl-C) and PASTE(Ctrl-V) the text into the
message composition
window, after selecting a newsgroup, and post it! (Or
you can attach
the
file, without writing nothing to the message window.)

If you have Netscape Navigator 3.0 do the following:

1. Click on
any newsgroup like normal, then click on 'TO NEWS'. This
will bring up a
box to type a message in.
2. Leave the newsgroup box like it is, change the
subject box to
something flashy, something to catch the eye, as "$$$ NEED
CASH $$$?!!
READ HERE!$!$!$" or "$$$!!!MAKE FAST CASH, YOU CAN'T
LOSE!!!$$$". Or
you
can use my subject title.
3. Now click on
'ATTACHMENTS'. Then click on 'ATTACH FILE'. Find your
file on your Hard
Disk(the one you saved from the text editor). Once
you
find it, click on it
and then click 'OPEN' and 'OK'. You sould now see
your file name in the
attachments box.
4. Now click on 'SEND'/'POST'. You see? Now you just have
199 to
go!!!(Don't worry, it's easy and quick once you get used to it.)
NOTE: All the versions of Netscape Navigator's are similar to each
other,
so you'll have no problem to do this if you don't have Netscape
Navigator
3.0.

!QUICK TIP!
(For Netscape
Navigator 3.x and above)

You can post this message to many newsgroups at a
time, by simply

selecting a newsgroup near the top of the screen, hold down
the SHIFT,
and then select a newsgroup near the bottom of the screen. All
of the
newsgroups in/between will be selected. After that, you follow/do
the
basic steps, stated below at this letter, except of step #1. You can
go
to the page stated below in this letter and click on a newsgroup to
open
up
the newsgroups window. Once you've done this, in the same window go
to
'OPTIONS', and then mark 'SHOW ALL NEWSGROUPS' and 'SHOW ALL
MESSAGES'. Now
you can see all the newsgroups and you can apply easier
the above tip.

If you have MS Internet Explorer do the following:

1. Go to the
newsgroups and press 'POST AN ARTICLE'. To the new window
type your
headline in the subject area and then click in the large
window below.
There either PASTE your letter(which it's been copied
from
the text
editor), or attach the file which contains it.
2. Then click on 'SEND' or
'OK'.

NOTE: All versions of MS Internet Explorer are similar to each
other,
so
you won't have any problem doing this.

GENERAL NOTES ON
POSTING: A nice page where you'll find all the
newsgroups if you want help
is http://www.liszt.com/ (When you go to
the
home page, click on the link
'Newsgroup Directory'). But I don't think
you'll have any problem posting
because it's very easy once you've
found
the newsgroups. All these web
browsers are similar. It doesn't matter
which one you have.(But it makes it

very easy if you have Netscape
Navigator 3.0 or later. You may download it
from the Internet if you
don't have it.) You just have to remember the
basic steps, stated
below.

BASIC STEPS FOR POSTING:
1. Find a newsgroup
and you click on it.
2. You click on 'POST AN/NEW ARTICLE' or 'TO NEWS' or
anything else
similar to these.
3. You type your flashy headline in the
subject box.
4. Now, either you attach the file containing your amended
letter, or
you PASTE the letter.(You have to COPY it from the text editor,
of
course, from before.)
5. Finaly, you click on 'SEND' or 'POST' or 'OK',
whatever is there.

Jimmy,
What is your problem? You obviously did not do your homework when ALL the fact were posted about the 902 MHz case. If so, you would have learned that the arrest for 902 MHz REALLY did happen in the state of Michigan. I can't stand people who shoot off at the mouth without checking the facts!!!!

248. simple radio controlled project/circuit???

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-05 00:00:00 UTC
From: ccn011@email.mot.com
Message-ID: <875937483.12178@dejanews.com>
Source record: 189211
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hi,
I always interested in radio controlled stuff, like
radio controlled car, plane, boat, etc. I used to have a radio
controlled car (which I still do) and a radio controlled glider (i
never got it up to the air though!).
What I really interested to know is the receiver and the
transmitter
part. I have yet to find out how they actually work. I was just
wondering whether you know if there is any simple radio
controlled project/circuit around that I can build. I did look through
the web , but dont seem to find any. If you happen to have or
know a site, please let me know. Thanks in advance.

p/s: please reply to ccn011@email.mot.com if possible.

>someone whose views you oppose ...

The fact that you call me a "pro-code fanatic" is just more evidence
of how little attention you pay to what goes on around here. It's
also an admission of what your real agenda is. I don't recall anyone
justifying the making of "death threats," real or imaginary. I see
mostly folks who find your story a bit less than believable, and find
your blanket slurs against anyone who challenges you to be more than a
bit insulting.

>> At the very least, you have given the perp some attention, which is
>> what he wanted.
>
>I haven't given him *any* attention ... I certainly did not reply ... nobody

So he doesn't know yet that he got you all riled up? The
cancellations, the FBI visits, etc, haven't clued him in? He hasn't
been able to find another ISP to read all your vitriol? My guess is
that he's laughing his ass off at your raving, and at the teapot
tempest he's stirred up here.

>they are GLAD to identify them and get rid of them ... because, if allowed
>to conduct their criminal activities with impunity, they will bring a whole
>ton of unwanted regulations down on the net as a whole ... to the detriment
>of all. The feds don't seem to view enforcing laws against threats of violence
>by wire to be a waste of time, either ...

Sending you a picture of a gun is a threat of violence? I guess if
somebody sent you a picture of a pretty girl, you'd screech about

sexual harassment, then?

Give it a rest, Carl. Nobody cares about your personal problems. Get the guy tossed off the Internet, if that's what trips your trigger. Get him thrown in jail for threatening your ego, if you can. Just spare us the gory details.

Oh, and Carl? Get some perspective. Life is too short to take this crap anywhere near as seriously as you're taking it. The sad fact is that your public wanking about this has little to do with any desire to punish some cretin for putting pixels on your screen in an interesting pattern.

No, it's about your continual spamming of your no-code agenda into inappropriate newsgroups, and about promoting your status as Poor Pitiful Carl, Victim, and most of all, it's about tarring everyone who disagrees with you or your attribute with a broad brush, and denouncing them all as idiots, Luddites, "beepers," and now, UseNet terrorists.

Who knows how many neutrals and no-code advocates have been put off by your insults, and have decided that a CW "filter" might not be so bad after all, if for no other reason than to keep YOU off the HF bands? I know that if I were still active on HF, I sure wouldn't want to run into you stirring the pot on 75 meters. There's enough nitwittery there already.

<<<s for those who lost their CBs, they're going to have to go shopping for more equipment if they want to go back on the air. Watkins said he plans to sell the seized equipment at auction.

Opinions anyone???>>>

Yep. I have been a ham for one month now, (my call is N3ZVM) and prior to getting my ticket, I once is a while used CB. Some people just curse bacause they know no one will catch them, not nessasarly to prove their point. Personally I don't like people cursing on CB, but to tell the truth, I really don't care as long as it's not on the ham bands. Taking away CBs don't do much, most of my CBs cost less than $20. That's my opinion.

73's,
N3ZVM

Este es un mensaje con m&#65533;ltiples partes en formato MIME.

------=_NextPart_000_01BCD186.2142A590

Are you fed up of counting up and down manually you listing of the DXCC
countries in order to know your current status?
Are you tired of copying your listings of worked and confirmed countries
from one sheet to another every time there is an addition of deletion of a
country?
Don't you want to say "I have worked 150 countries, more or less" any more?
Have you ever spent an evening searching that paper or notebook where you
used to trace your DXCC status?

Here you have the definitive solution. The DXCC Worksheet.

HTTP://www.redestb.es/personal/g_sampol

What is the DXCC worksheet?
It is an Excel worksheet that helps you trace your status of DXCC
countries. You only have to fill the cells with your worked and confirmed
countries and the totals will be automatically updated. You don't have to
make any calculation !

What do I need for using the DXCC worksheet?
You need a computer running Microsoft's Excel Version 5.0 or 7.0(97)
Availability for former versions of Excel can be studied on demand.

Which are the facilities of the DXCC worksheet?
It provides an updated listing of the DXCC countries (including the deleted
ones). This listing includes:
Common prefix/prefixes
Name
Continent
ITU zone
CQ zone
Provides information on the date of insertion or deletion of the country.
Allows to enter data for any band from 160 m. to 23 cms. plus a
customizable band (3 cms, etc.).
Allows to enter separate data for SSB and CW plus a customizable mode
(RTTY, SSTV, etc.).
Automatically calculates:
Number of worked countries per band in SSB
Number of worked countries per band in CW
Number of worked countries per band in the customizable mode

Number of worked countries per band in mixed mode
Number of confirmed countries per band in SSB
Number of confirmed countries per band in CW
Number of confirmed countries per band in the customizable mode
Number of confirmed countries per band in mixed mode
Total number of countries worked in SSB in the WARC bands
Total number of worked countries in CW in the WARC bands
Total number of worked countries in mixed mode in the WARC bands
Total number of confirmed countries in SSB in the WARC bands
Total number of confirmed countries in CW in the WARC bands
Total number of confirmed countries in mixed mode in the WARC bands

How can I get the DXCC worksheet?
You can download it from my web site at:
HTTP://www.redestb.es/personal/g_sampol

------=_NextPart_000_01BCD186.2142A590

>different licenses. That was the point of my post.

Bill,

For a brief period, roughly 15 years from 53 to 68, that is
true. A lot of folks have the mistaken notion that "incentive
licensing" has only existed since 1968. In fact, incentive
licensing has pretty much been the rule in the US from
before 1921 until the present, except for that short break.

Now what was your point again?

73, de Hans, K0HB/4ID

>signal into a 50 ohm unidirectional antenna.

The only bulletproof design would use a parabolic reflector, which at the
UHF frequencies you're using would have to be pretty large.

It certainly wouldn't be impossible to build, though, and
a transmitting antenna = a receiving antenna. The
angle is dependent on the size of the reflector: the
bigger the reflector, the smaller the angle and thus
the more directional the antenna. I don't have the formula
for it, but it's common enough and should be in any electromagnetics
text.

The only advantage to building a dish for low frequencies is that you
don't need a very substantial one: you could build the thing out of
chicken wire and still have a very efficient reflector. But you'll still
need a pretty large structure: I'm guessing something about 10-20 feet in
diameter, depending on your application.

Source record: 189220

Thanks for reading my message. I am constructing a 10m 3 elemant yagi
with a hairpin matching network.
The reason.....I already have the boom and elements from an old tribander
,, no traps anymore ...
Can someone give me proven dimensions for a 3ele 10m monobander boom
length is restricted to 124 in
I have tried some dimensions from various computer antenna programs but no
success
thanks Peter vk4efxdx@mail.cth.com.au

Here's a couple more:

http://www.tapr.org/~n3eua/hw/mitrek.html
http://www.seits.org/seits/mitrek.html

With those two and the SEDAN site listed above, you should be able to
convert your Mitrek to a full duplex unit. This is a project I'm
planning to start and it looks rather easy.

Has anyone popped one open to see if there are any "magic
jumpers" or places where a 12/24 switch may have been?

I doubt if Oregon Scientific designed these, as they are
available from many other sources under other names. I'd bet one
of those "other" sources would want a 24hr version.

Most of the Oregon Scientific type stuff (incl the radio-clock)
are available from The Control Company:

http://www.control3.com/

Although their page does not mention a 24 hr mode either.

> >fact that you seem to find it amusing perhaps is even more distressing...

(Me neither, Mark, but it's QUITE interesting to see the pro-code
fanatics come to the defense of such actions in one way or another
and try to transfer the negative "spin" onto me for having reported it.)

[Yo Doc, pro-code fanatic said:]
> If someone sent me a picture of someone aiming a handgun at the
> camera, I'd throw it in the trash and forget about it! If there was
> something about it that compelled me to consider it a serious threat,
> I'd deal with it discreetly -- I wouldn't be telling everyone in some
> Usenet newsgripe about it! After all, I wouldn't want the perpetrator
> to destroy any evidence!

The perpetrator doesn't have the capability to destroy any evidence ...
he was frozen out of the accounts, the logs and headers were
already saved, and copies of the threatening messages/picture
were in the hands of the FBI *before* I mentioned the incident here.

[Yo Doc, pro-code fanatic said:]
> This "incident" Carl is reporting is *NOT* I repeat *NOT* reality. It
> didn't happen!

Yo Doc's insistence that this "never happened" kind of makes me
wonder what, if anything, he might be trying to cover up ...

[Yo Doc, pro-code fanatic said:]
> If Carl wants to send me a certified copy of the
> alleged E-mail as proof that it happened, I'd then eat my words.
> However, he'll NEVER do that because this whole thing is just a
> figment of his fragmented mind. The man is truly to be pitied!

I don't know what Yo Doc is trying to infer when he says a
"certified copy" ... I have already posted a complete copy of a
message (with headers) that I received from one of the administrators
at rocketmail.com, which acknowledges receipt of one of the (included)
threatening messages, thanks me for reporting the incident, and says
that the account is toast ...

The headers indicate that the person logged into rocketmail from a
dialup account at an ISP in Minnesota ... their sysadmin has validated

the IP address and toasted the account there as well ...

Of course, Yo Doc will claim it's a fraud or something ... he'll never be honest and, as he says above, "eat his words" ... he's not enough of a man and doesn't have enough character for that ... that's why he tries to claim "it never happened" and tacitly condone that sort of activity ...

Actually, I thought it would be VERY interesting to see just how
many of you pro-code fanatics would actually go out of your way
to try to justify someone making death threats, etc. against
someone whose views you oppose ...

> At the very least, you have given the perp some attention, which is
> what he wanted.

I haven't given him *any* attention ... I certainly did not reply ... nobody
yet knows who he is (except those involved) ... so where does he "get
his jollies?" (unless he enjoys being kicked off the internet and charged
with federal crimes ... if that is the case, he *does* need attention ... of
the psychiatric kind ... perhaps he'll receive some if he's incarcerated)

> And you have given the whole world a good idea of

> money that might have been better spent on real problems.

You don't get it ... (which certainly doesn't surprise me) ... responsible ISPs
DO NOT consider ridding themselves of people like that to be "a waste of time"
..
they are GLAD to identify them and get rid of them ... because, if allowed
to conduct their criminal activities with impunity, they will bring a whole
ton of unwanted regulations down on the net as a whole ... to the detriment
of all. The feds don't seem to view enforcing laws against threats of violence
by wire to be a waste of time, either ...

Michael P. Deignan wrote:
>
> It has no valid justification in *YOUR* mind. However:
>
> 1) We do have a treaty requirement for a sending/receiving morse test

This is obviously a fact and at this point in time requires the testing of code, no ifs or buts (unless you include the countries which do allow (at least some) HF access without a complete code exam (sending & receiving) or any test at all ;-]). However, as everyone should be well aware treaties are not "engraved in stone". A treaty is just the agreed common standpoint at the time it was signed. Nowhere does the treaty say that it may not be changed if the parties can be convinved to change it.

I am against anyone who advocates breaking the rules, but this is not the same thing as advocating a change to the rules. There is no logic in saying that a rule cannot be changed because it exists.

> 2) It is in the government's interests to promote a common mode of operation

Please explain what this interest is?

Given that Morse Code merely represents the alphabet (not always the english one, BTW), it requires a common written language before there can be meaningful communication. This argument would be stronger if the Q codes were universally tested in this way - this is not the case.

While there is some validity that Morse removes the problems of vocal accents, it is balanced by the fact that any non-verbal mode has the same advantage. Additionally, Morse operators do have an operating accent (irregular sending speed, poor timing of dots, dashs and spaces, etc) which can hinder communications.

> 3) 40% of all amateurs do use morse code

Then, this means that 60% don't. I fail to understand why a mode that the majority of amateurs DON'T use is given as a reason for it to be tested.

> 4) CW is a major mode in DX

Agreed. However, it is not the ONLY major mode used in DX and amateurs are not required to do DX (and many don't). As only 40% of amateurs use Morse and Morse is not the exclusive DX Mode, then DX using Morse is again a minority interest of amateurs.

> 5) Most long-distance contact records are made using CW

Agreed if you are referring to the longest distance for a particular band, but what you neglect to point out is that most of these records are above 30MHz where Morse testing is not mandatory. What it does indicate is that people will choose to learn (and more importantly, remember) Morse Code if they have a use for it.

Given the number of other modes, I'm pretty certain that MOST long distance contact records aren't using Morse. Actually these types of comparisons are pointless as many modes are designed for incompatible purposes and cannot be compared at all. For example, Morse can never send a picture and hence holds no long distance records at all for this type of activity.

> 6) Most experimenters use CW for their "short, controlled" transmissions.

Unless you define "short, controlled" then this really has no meaning and would be very hard to prove, given that many amateurs limit their experiments to antennas and mostly use voice for interactive testing. My point is that Morse is not REQUIRED for "short, controlled" transmissions, although it may be chosen as such by some or many.

> These are just a half-dozen I can rattle off the top of my head, given I
> just woke up.

>
> MD

Well, after disagreeing with Michael on each of his points, do I think there are any valid reasons for retaining a Morse Code test? Yes, there is no question that it is suitable for licencing people to access Morse Code only (not CW only, which is much broader) segments in all the bands. While some countries may already have mandatory Morse Segments in all bands restricted to amateurs with a code test, this is not universal and would need to be put in the international treaty if the validity of the Morse Code test is to hold its own for the long haul.

Mark.

Would appreciate any info on how to modify my YAESU FT-980 to
transmit outside the ham bands.

Thank you for reading this mail.

Don't miss the Gulf Coast Ham Convention (Houston Tx area).
It's OCT 17/18/19th.. It will have outside tailgate swap area and large inside swapfest, along with a vendor area with new amateur equipment.

275. 1000MP specific mail list

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-05 00:00:00 UTC
From: jeff@jehosophat.com
Message-ID: <slrn63f7o2.ah5.jeff@photuris.jehosophat.com>
Source record: 189346

Just created a new mail list specifically for FT1000MP users.

The list is not supported or endorsed by Yaesu. The list is
meant to be a place where 1000MP users can gather and "hang out"
with each other, exchanging information and ideas. As such the tone is
informal, and people communicate as if they were all good friends.

You can find out more from this Web page:

http://jehosophat.com/1000mp/

Or subscribe to the list by sending an email message to:

1000mp-list-request@jehosophat.com

with a Subject of : subscribe

73 es good DX,

I only consider the source. If I actually had an investigation going
on I certainly would post nothing about it....period! What was Carl's
point in posting it anyway? Are we supposed to feel sorry for him?

It is only an attempt by Carl to manipulate the sheepole that see
along his lines to begin with. I don't believe a word of it nor do I
care for anything that Carl says or believes here. He's an alligator
hollaring, "Big Mouth!" Talk about the word, "Fanatic."

I looked up "fanatic" in my dictionary. The first definition: 1. n.
Carl Stevenson.

I might HALF believe Carl if he provided verifiable names and numbers
to people he's spoken to at these different agencies and ISPs. But as
I expect, we'll never see any of that. Just some lame excuse why he
couldn't produce and that this is what he would expect out of (his
favorite word) "fanatics." Yup...Carl...your elevator is definitely
stuck between floors.

So you're asserting that the FBI only enforces the laws concerning threats
via the PSTN and other media when public officials are involved??? I doubt
the veracity of that claim ...

> He will be checking with the FBI office that covers Carl
> location, but "it is HIGHLY doubtful, that ANY government agency will
> expend any of its money chasing all these supposed
> threats/slanders/libels, etc etc, etc.

First ... since both you and your friend are unrelated to this case, I would
submit that you have no business sticking your nose into it at all ... and
certainly not in any sense of trying to influence the investigation.

Nobody is talking about "slander/libels, etc. etc., etc." ,... I can handle the
name-calling and attacks on my character ... but threats of physical violence
are an entirely different matter ...

> The Internet, by its very nature
> allows people to assume the identity of others. There is no rational way
> to prove that (1) the complainant truly received the alleged message and

Baloney ... the message headers can be compared with the ISPs log
files ... they know who was assigned what dynamic IP address at what
time and what message IDs were generated and logged ...

> (2)that the alleged sender is in fact not an someone entirely different.

The sender logged into rocketmail from a personal ISP account in Minnesota. That ISP has validated that the IP address was assigned to one of his dial-up ports and knows whose login id and password were associated with that login. They also have the guy's credit card number or other billing information to validate his id/address ...

> Personally, I think this posting has no place here and quite frankly
> IMNSHO, think this posting is on the same level as the alleged and never
> verified letter to Carl from an ARRL director.

So you'd prefer that the outrageous, even illegal, behavior of some pro-code fanatics be "swept under the rug" and ignored, huh???

WRT to the letter from the ARRL director in Missouri ... I forwarded that letter to a couple of other ARRL officials that I know personally ... their response was an apology for their associate's boorish, sanctimonious response ...

BTW, Steve ...
If I said, "During the daytime, if there are not clouds, the sky generally has a bluish color," would you try to find some reason to question that, too?

If so, why? Do you believe that only pro-code ARRL loyalists are capable of making truthful, factual statements? If so, why?

Posting to the newsgroups without using one's callsign is not a violation
of any law ... sending death threats via public telecommunications networks
IS ...

The fact that you don't use your callsign and name only indicates that
you don't have the balls to associate your posted drivel with your name
and callsign for all to see ...

SB DX @ WW $OPDX.325
Ohio/Penn DX Bulletin No. 325

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 325
BID: $OPDX.325
October 6, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, The ARRL Letter, WB2YQH & WB2RAJ The 59(9) DXReport, W3UR & The Daily DX, K4WJ, WC5P, KH6BZF REPORTS, NE8Z, 9K2HN, CO3CL, DL5EBE, DU9RG, EA3BT, EI6FR, F6AJA, G4BUE & DX News Sheet, HA0HW, IK1WVQ, IK1QBT, VK4AAR and VE3BW for the following DX information.

5A, LIBYA (Update and Reminder!). As mentioned in OPDX.312, a group of Germans will be active from here November 24 through December 4th. The operators will be Andy/DJ7IK, Dieter/DL3KDV, Felix/DL8OBC, and Thomas/ DL1GGT, of the RRDXA. Activity will included the CQWW CW Contest as a Multi-Single entry with two stations on the air from the 5A1A club station. They will operate CW/SSB and RTTY on 160-10 meters (including the WARC bands). An InterNet E-mail reflector has been set up by K7ON. You can send a message to "libya@qth.net" with the command "subscribe libya" in the message body, and they will keep you up-to-date. Also, check out their WWW page at: http://www.afthd.th- darmstadt.de/5a1a/ Donations can go to DL8OBC. QSL via DL3KDV.

8P, BARBADOS. The "DX News Sheet" reports David, VE3VET, will be active once again as 8P9IJ. Activity will be on SSB and RTTY all bands. His operations will take place October 5-12th, from Warleigh Plantation in St. Peter Parish (while on his honeymoon!). QSL via home call.

9K, KUWAIT (Special Event). Look for 9K2BI to be active in the 40th World Scout JOTA, October 18-19th. This station will be on the air with the coordination of the Kuwait Amateur Radio Society "KARS" (9K2RA) and Kuwait Boy Scouts Association "KBSA" and will participate in the above mentioned event for the first time. The KARS helped established a Radio Station at the HQ of KBSA under the callsign of 9K2BI and the station was provided with all required pieces of equipment and their accessories. The station will eventually become permanent. During the special event, the station will be operated and administered by the members of KARS with the participation of KBSA's members including

ex-scouts.

CM/CO, CUBA. Do you need a card from here? Jose, CO3CL, reports the following four stations are very active from the island, even on the WARC bands. Look for:
CM3IP on 40 meters 0000-0400z on CW. QSL via WD4OIN.
CO3ET on 30 meters 2200-0400z on CW. QSL via WD4OIN.
CL3FL on 10 meters (check 28800-29000 kHz) 1900-2100z on SSB. QSL via CO3CL.
CO3CL on 12 meters (check 24900 KHz +/- QRM) 2300z +/- 0030z on SSB. QSL via W3HNK.

DX1, PHILIPPINES. Look for DX1S to be on the air for the CQWW SSB and CW Contests. This is the callsign of the Filipinas DX Society recently organized by Roger, DU1KT, and Robin, DU9RG, as founding president. Membership is open to DXCC holders, both local and foreign. QSL via: 818 Acacia Ave., Ayala Alabang Village, 1780 Muntinlupa City, Philippines.

EL LIBERIA. Joe, K3KN, currently active from the U.S. Embassy, will be operating as EL/K3KN until November 6 or 7th. He operates SSB (CW on request) on 40-10 meters with his IC-706 and log periodic. He was heard this past weekend on 24954 kHz at 1330z, 10113 kHz at 2145z and 21264 kHz at 1745z. QSL via KB3U.

EP, IRAN (Special Event). On Friday, October 3rd, around 1225z, a station with the call EP23TIE was active on 14200 kHz. This Iranian special event station will be on the air until October 10th to mark the 23rd Tehran International Exhibition. EP23TIE will be on the air from 0530 until 1330z daily. QSL to the Directorate General of Telecommunications, Box 931, Tehran, Iran.

FJ, SAINT MARTIN. Jacques, F6BUM, will be active as FJ/F6BUM from ST. Barthelemy October 24-31th. Activity will be on SSB and CW with operations on 40-10 meters. This French island has an IOTA of NA-146.

HB0, LIECHTENSTEIN. A a Hungarian team will once again be active from Triesen, on October 31st through November 8th. They will participate in the HA-QRP Contest with HB0/HA5RT/p callsign. They will run a QRP station on 3511 kHz 24 hours a day between November 1 and 7th. The leader of team is HA6NL/Laci, and the operators are HA0HW/Laci, HA4GDO/Tomi, HA4XG /Geza, HA6PS/Zsolti, HA6PX/Csaba, HA6ZV/Tibi, HA9AX/Imre and HA9RR/Pista. The operators will use their home calls after HB0/ prefix. Activity will be on all bands 160-10 meters including the WARC bands, CW, SSB and RTTY. QSL cards for HB0/HA5RT/p s QSOs should go to HA6NL and all others should go via their home calls. Direct and bureau cards will be answered the same way. They mentioned that they would like to work a few days from 4U1ITU between November 3-6th. Suggested frequencies:

CW - 1831, 3511, 7011, 7025, 10104, 14011, 14025, 18071, 21011, 21025, 24891, 28011 and 28025 kHz
SSB - 1841, 3789, 7089, 14189, 14240, 18141, 21289, 24941 and 28489 kHz
RTTY - 7042, 14080, 21080 kHz

HP0, SOUTH SHETLANDS. "The Daily DX" received a report that states Stan, SP3BGD, will be leaving Poland on October 20th, to head for the Henryk Arctowski Station located on King George Island in the South Shetland Islands (VP8). He will be taking a boat trip to the island which will take about 40 days to get to the Antarctic base. Once on the island, Stan will relieve Marek (Mark), SP3GVX, who has been operating the club station HF0POL. Stan will leave the island and head back to Poland on December 15th. Since 1991 this club station has made over 25,000 QSOs.

HR6, ROATAN ISLAND (Honduras). Joe, VE3BW, will be active from this Honduran island, February 1-22nd, as VE3BW/HR6. He will be active in the ARRL DX CW Contest. Look for him on the WARC bands before and after the contest. ADDED NOTE (Reminder!): Joe will also be active from St. Kitts from November 17th through December 1st as V47CA. He will be active in the CQWW CW Contest. QSL via Joe's homecall: Joe Adams, 5 Romko Court, St Catharines, Ont. Canada L2N 7A1

IOTA NEWS. Tony/IK1QBT, Nino/IK1ZOZ, Gigi/IK1WJI and Mauro/IK1CJO plan to be active from Gallinara Island (rare island of Ligurian group) IOTA EU-083. Depending on the weather, activity will be between October 11th and 12th or 18th and 19th. Operators will sign IP1/homecall. Their activity will be on CW/SSB with operations on all HF bands (WARC bands included). Check around the standard IOTA frequencies. There will also be activity on 6 meters and VHF in SSB. The reference number for the Italian Island Award (I.I.A.) is SV-01. QSL via their respectives home calls via bureau or direct.

IOTA NEWS. Laci, HA6NL, will spend his holidays on Corfu Island (EU-052) and will operate as SV8/HA6NL/p between October 15-22nd. He will operate mainly CW but some SSB and RTTY operation are also expected. Suggested frequencies on CW: 1831, 3511, 7011, 7025, 10104, 14025, 18071, 21011, 21025, 24891, 28011 and 28025 kHz. QSL to his home call via the bureau or direct.

KH5, PALMYRA (and KH5K Kingman Reef). The South Sandwich Island Dxpedition Group (SSIDXG) announced that one of their team members, Chuck, N4BQW, will go with the USFWS to Palmyra Island in two weeks. Chuck will be flying to Christmas Island where he will meet up with the USFWS. From there Chuck will take a 3 day boat trip to Palmyra Island. Chuck will operate as N4BQW/KH5 for 8 days. The dates of operations were not announced. (ed. It sounds like the operation will take place within a couple of weeks.) He will operate 80-10 meters including WARC bands. He has managed to get permission to take a beam with him this time but no amp. He will operate CW and SSB and possibly RTTY. Chuck has spoken with the Ship's Captain, and he informed him that barring unforeseen problems, there would also be a 48 hour operation from Kingman Reef after they leave Palmyra Island. QSL via WA4FFW: Mac McIntyre Sr., 2903 Maple Ave., Burlington N.C. 27215. Out of pocket cost of this operation for Chuck will be $4000.00 USD. Support can be sent to the:
SSIDXG DXPEDITION FUND, 93787 Dorsely Lane, Junction City, OR 97448
-or- to WA4FFW home address.

PACIFIC ISLAND HOPPING. Maurice, ZL2MF, and Ken, JA3MVI, are currently island hopping in the Pacific on a business tour. By the time you read this, they probably have left Rarotonga (South Cook). Thanks to Alan, VK4AAR, who talked to Maurice and has provided the following schedule below. The information includes duration of operation, callsigns to be used and QSL routes in the ( ) and bands available.
Until Oct 5th - ZK1MJF (ZL2MF) and ZK1MVI (JA3MVI) - 15/20/40m
Oct 6-9th - ZK2MF (ZL2MF) and ZK2KY (JA3MVI) - 15/20/40m
Oct 10-16th - A35KY (JA3MVI) - 15/40m
Oct 12-16th - YJ0AMF (ZL2MF) - 20m
Oct 15-17th - 3D2MF (ZL2MF) and 3D2KY (JA3MVI) - 15/20/40m

They are travelling together, except Ken will be in Tonga while Maurice is in Vanuatu. Ken has an inverted vee for 15/40m and Maurice has the 20m dipole. When they are together, they will be able to share antennas and visit different bands. (Alan.. "The last stop in Fiji starts on 15th which is the day before they leave their previous locations. I suppose this has something to do with the International Dateline?")

P4, ARUBA. Rick, NE8Z, will be active as P4/NE8Z from here, October 25th through November 1st. Activity will be mainly CW on the WARC bands. QSL via K8LJG.

QSL INFO AND NEWS....
Declan, EI6FR, reports that QSL cards for GI/EI7NET Rathlin (EU-122) are back from the printers, and the replies to all direct requests are starting to go out. A bureau mailshot will be done in the coming month.

Dominik, DL5EBE, DX-editor of CQ DL-magazine, informed OPDX on the status on the VP8CTR and R1ANF QSL cards. He states Roman, VP8CTR, sent him an e-mail reporting that he has already made about 13000 QSOs from Vernadsky Base. Meanwhile, Dominik reports that he has received the beautiful pictured QSL cards from the printer. The cards where donated by Northern California DX Foundation (NCDXF), FUNKAMATEUR-Magazine (printer) and the German DX Foundation (GDXF). He currently has the logs up to the IOTA-contest, and all cards until this date will be sent out within the next couple of days. As soon as he receives the next log-files via e-mail, he is ready to continue QSLing as fast as possible. Dominik is also the manager for Vic, R1ANF, who belongs to the current wintering team of Bellingshausen Base, South Shetlands. He reports that logs, so far have not arrived yet. Please be patient. He also mentions that he is NOT managing cards for the last operation of R1ANF, Op. Oleg (UA1PBA). These cards are being handled by Nick, RK1PWA.

T32, CHRISTMAS ISLAND. Paul, WC5P, reports to OPDX that he will be in Eastern Kiribati from November 19th to Decmeber 2nd, operating as T32BE. Activity will be on all HF bands, mostly CW. He will be active in the CQWW CW Contest. QSL via WC5P.

TM5, FRANCE. Dominique, F5SJB, will be using the callsign TM5CW from November 22nd to December 1st. This will include participation during the CQWW CW Contest.

V6, MICRONESIA. Aston, V63BR, is reportedly now active on RTTY. There were no QSNs reported. QSL via AA4US or direct to: Aston Nakayama, P.O. Box 305, Chuuk Island, Micronesia.

XE, MEXICO. Josep, EA3BT, and his wife Nuria, EA3AOK, who will be active from Cancun, on October 12-18th, will be using the callsigns XF3/EA3BT and XF3/EA3AOK, respectively and from Cozumel Island (NA-090), October 19-26th, they will use the same callsigns. Their activity will be on 40-10 meters, including WARC bands, possibly 80 meters. Operations will be on SSB and RTTY and some little CW if needed. They will also take part in the CQWW SSB Contest. QSL via EA3BT.

Z2, ZIMBABWE. "The 59(9) DXReport" states that DF3XZ will be active from here October 15-30th, as Z2/DF3XZ from Z21HJ's QTH. QSL via homecall.

In article <5HUAjWk.sanderman@delphi.com>, Stephan M. Anderman
<sanderman@delphi.com> writes:

>Two classes of license?
>Hmmm, they're not the facts I have!
>Prior to incentive licensing, there were 5 classes of license:

The point that you miss is that there were really three classes of
amateur radio licensing in effect. Extra Class, Advanced, General,
and Conditional licencees all shared the same exact privileges,
same power levels, same ability to use all portions of all amateur
bands and all available amateur modes. Novices had cw privileges,
and for a while, voice on two meters. Technicians had amateur
privileges in the VHF and above range, although not all amateur
privileges or frequencies originally. It was also possible for one to
be both a tech and a novice for limited period of time. I don't
think you quite understand the difference between effective class
and what the license said. The present system makes little to no
sense, although frankly, it looks like most of the people upgrading to
Extra, would do so if just to be able to get a great callsign. I also
note that while there were complaints about amateur radio declining
among some then old timers, that period of time is now looked upon
as a sort of golden age by others.

I. Yaesu FT-50R PC Programmable Handheld Transceiver

-Wide Multi-band Receive 76-200, 300-540, 800-999 MHz
-3-Selectable Rx modes (AM and Daul FM [FM-Narrow, FM-Standard])
-5watt Ultra Compact Construction
-Rugged MIL Spec MIL-STD 810 Rated for Shock and Vibration
-Auto Range Transpond SystemTM (ARTS) uses DCS to automatically
poll other stations, indicating if they are within simplex range.
-Digital Coded Squelch (DCS) is used in the commercial industry, DCS
provides 113 unique codes in addition to the standard CTCSS tones.
-112 Memory Channels each stores offset, CTCSS/DCS Encodement &
power level.
-Alpha-Numeric Display up to 4 characters may be used to name each
memory channel.
-Digital DC Voltage Display monitors current battery voltage.
-MARS/CAP Modifiable
-112 Channels
-5W Ultra Compact Rugged MIL Spec Modular Construction
-Full 5 Watts Power Output at DC 9.6V with 4 selectable power levels
-RX/TX Battery Savers
-Direct FM for Better Voice Clarity
-Alphanumeric Display
-Unique Water Resistant Clam Shell Design Permits Rear Mount Battery
-Digital Voice Recording System
-Check the Yaesu Site, http://www.yaesu.com/ft50.html
for specifications link on this great product

II. Yeasu Rubber Case Protector Fitting FT-50R

III. Yaesu ADMS-1c Advanced Data Management System

-3.5" HD Diskette with Windows PC Program
-Serial Interface Cable to Connect to a 9-pin Port
-Allows Keyboard and Menu Programming for FT-50R

IV. 2 - Yaesu FNB-41 Ni-Cd Battery

DC 9.6 V 1100 mAh 5 watts TX

V. Yaesu MH-34 Speaker/Microphone

For more information and price e-mail me JLG7503@aol.com

The radio is in perfect condition. It has almost never been used, and is brand new. It is only approximately 1 month old.

Make a purchase price offer, and we may be able to negotiate to both our standards.

E-mail soon, or it may be gone!

While many of us have agreed with the concept of setting aside
CW only segments, I question why any such CW only HF
segments would warrant a code test? Clearly there
is no problem with bad usage of the only two current
CW only band segments (50.0-50.1MHz and 144.0 to
144.1MHz). So while it wouldn't bother me at all if a
CW test barrier was maintained solely as a special
test element for that CW only frequency use (assuming such
a special set of band segments were so approved) I still
see no reason for the CW test.

I happen to own 2 of the hytowers and have them configured in a 2
element phased array on 75. They also handle 40 as well.

They are a good, broadband, efficient vertical antenna once you get a
good number of radials under them

If you have queries, you best try my e-mail address as I'm not on this
newsgroup due to the press of time.

A.N.A.R.T.S. News Bulletin 979 5th October 1997

COLS COLUMN

EARLY COMMUNICATIONS. COOKE AND THE ENGLISH RAILWAYS.

BY 1836, COOKE HAD BECOME OF THE OPINION THAT THE BEST MARKET FOR ELECTRICAL COMMUNICATIONS WAS THE NEW RAILWAYS. HE APPROACHED THE DIRECTORS OF THE LIVERPOOL AND MANCHESTER RAILWAY COMPANY BUT, WAS UNSUCCESSFUL IN PERSUADING THEM TO ADOPT HIS TELEGRAPH. HE THEN APPROACHED THE LONDON AND BIRMINGHAM RAILWAY WITH MORE SUCCESS.

COOKE WANTED TO USE A TELEGRAPH AS A FIRE ALARM ON THIS RAILWAY BUT WAS DISSUADED FROM THIS BY A FRIEND WHO TOLD TO WAIT BEFORE PROCEEDING WITH A PROJECT 'INVOLVING THE DISTURBANCE OF THE PAVEMENT' UNTIL THE SYSTEM HAD BEEN PROVEN. AT THIS TIME HE MET THE FAMOUS ENGINEER ROBERT STEPHENSON, AND THROUGH HIM GOT PERMISSION TO OCCUPY A BUILDING ON THE RAILWAYS PROPERTY. HE ALSO OBTAINED THE RIGHT TO HAVE AS MANY MEN AND EQUIPMENT AS HE LIKED TO BUILD A DEMONSTRATION TELEGRAPH.

WITHIN A SHORT TIME HE HAD MADE A LINE MANY MILES LONG WITHIN THE BUILDING AND WAS READY TO DEMONSTRATE IT TO STEPHENSON. ON JULY 4TH THAT YEAR HE TRANSMITTED IN STEPHENSON'S AND OTHER DIRECTORS PRESENCE, FIRST A DISTANCE OF ONE MILE. HE INCREASED THE DISTANCE GRADUALLY TO A TOTAL OF 13 MILES. THIS WAS TO SHOW IN COOKES WORDS 'SIMPLY TO SHOW THAT THE CURRENT OF FLUID WOULD PASS THROUGH MILES OF WIRE INSTANTANEOUSLY'. HE USED THE SAME TELEGRAPH THAT HE HAD BUILT WHILE IN HEIDELBERG, THE ONE UTILISING A SINGLE DEFLECTED NEEDLE. IT CAUSED GREAT EXCITMENT AND INTEREST. HE THEN OPERATED BELLS AND OTHER DEVICES. HE FINALLY DISPLAYED THE GRADUAL DECREASE OF CURRENT OVER VARIOUS INCREASING LENGTHS OF WIRE.

COOKE MUST HAVE DEVISED A RELAY OF SOME KIND AT THIS TIME. IN

A LETTER HE WROTE ON 9TH JULY 1837 HE SAYS 'THE RESULTS OF OUR EXPERIMENTS FAR SURPASS MY EXPECTATIONS. MY INSTRUMENTS FOR BRINGING A SECONDARY BATTERY INTO ACTION AT THE DISTANCE OF 14 MILES. ACT UNDER THE INFLUENCE OF SIX PLATES OF MY OWN CONSTRUCTION.

PROFESSOR WHEATSONE HAD CALCULATED UPON SEVEN PLATES PER MILE AND I UPON TWO. WE WERE BOTH VERY WIDC OF THE MARK. A PUBLIC DEMONSTRATION WAS HELD ON 25TH JULY 1837 TO SHOW THE TELEGRAPH OPERATING ALONG THE RAILWAY LINE BETWEEN EUSTON AND CAMDEN TOWN, A DISTANCE OF ABOUT ONE MILE. AMONG MANY PRESENT WERE STEPHENSON AND SIR CHARLES FOX THE RESIDENT ENGINEER OF THE LONDON AND BIRMINGHAM RAILWAY. THIS TIME THEY USED WHEATSTONES 5 NEEDLE TELEGRAPH. NOT MUCH AT ALL HAS BEEN RECORDED OF THE RESULTS OF THIS DEMONSTRATION, BUT COOKE FELT SUCCESS WAS JUST IN REACH OF HIM, IN ANOTHER LETTER ON THE SUBJECT HE SAYS 'YOU MAY IMAGINE THE TASK WHEN I TELL YOU THAT 2,888 NAILS HAVE BEEN PUT UP FOR THE SUSPENSION OF THE WIRES ALONG THE RAILWAY'.

THE PROBLEM OF INSULATION WAS THE BIGGEST PROBLEM FOR THIS AND OTHER TELEGRAPHS OF THE TIME. WE SHALL HAVE A LOOK AT THIS PROBLEM NEXT WEEK.

73S FOR NOW DE COL VK2CTD.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT 26 SEP - 02 OCT

ISSUED 03 OCT

SUMMARY

Date 26 27 28 29 30 01 02

10cm 89 88 87 90 88 87 86

A 4 11 13 9 9 32 (5 EXPECTED)

T 47 40 52 32 38 56 5

Solar activity was very low 26 27 and 29 Sep to 1st Oct. low

on 28 Sep and 2nd Oct.

The geomagnetic activity at Learmonth WA was quiet on 29 Sep and 2nd Oct. quiet to unsettled 26 28 and 30 Sep. There were minor storm levels observed overnight following a sudden impulse at 0100 UT.

Maximum usable frequencies were mostly near predicted monthly values. There was a mild depression after local dawn on 1st; and frequencies were depressed by 20 per cent until local dawn on 2nd.

FORECAST 03-09 OCT

Solar: Low.

Geomagnetic: active 03 Oct folowing sudden impulse observed at 2320UT 02 Oct. Field is expected to be quiet to unsettled levels on 04-05 Oct. Active levels are expected 06-07 Oct based on recurrence.

Frequencies: mostly near predicted monthly values. However, degraded HF comms quality expected on 04 Oct and during interval 06-07 Oct.

COURTESY OF IPS RADIO AND SPACE SERVICES

VK2SG RTTY DXNOTES FOR WEEKENDING SEP. 26 1997

Activity is increasing with improved condx and also more interest on this mode as well from newcomers and oldtimers. This anyway is not the only reason, surely we must consider the increase of RTTY activity performed by the recent dxpedition (5A28,VK9WY are just an example). Let's hope this will be a target for next trip.

Our thanks this week go to: ZS5S, W2JGR, WB2CJL, WX5L,W5KSI, AA5AU, WS7I, 4Z4DX, SP3BGD, SP4TKK, SP4CHY, ON4BX, ON4VT, IK1HSR, IK8VRN, DL5KAT, DJ8QP, DL7VRO, DJ6TK, DF2KU, PA0HVF, I1JQJ and the 425 DX gang, OPDX, DJ3IW and the Central Europe

DX Cluster DB0SPC the NJ0M node of Minnesota and the IK5PWJ

Cluster.

NOTE OF INTEREST:

KURE IS., K7K. Under this special call sign from 26 Sep will start the trip which will be operating four to five HF stations from 10 to 160 meters, CW, SSB and RTTY. They will look for difficult areas specially Europe and Africa. QSL manager is Bob Johnson, KE7LZ, 5627 West Hearn Road, Glendale, Arizona 85306-4213.

HONDURAS, HR. Sigi, DL7DF, with other friends will be operating from Oct 17-29. Plans include low bands CW/SSB but also RTTY is possible.

The VK2SG RTTY DXNOTES are also available on Internet at reflector digital-dx at st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/(tilde)jukka/rtty.html

For next week's bulletin send your bandpass Jules W2JGR at W5KSI.(hash) NOLA.LA.USA.NA. Gl de (DX2) Luciano, I5FLN Luciano Fusari E-mail i5fln at iol.it. HF Pactor I5FLN at ZS5S.ZAF.AF

SB DX ARL ARLD041

ARLD041 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, 425DXnews, The Daily DX, QRZ DX, DXNS, Frank, AH0W and Contest Corral from QST. Thanks to all.

RODRIGUEZ ISLAND, 3B9. Toshi, JA1ELY, and Roddy, 3B8DL, will be QRV as 3B9/3B8DL on 80 to 10 meters using CW, SSB and RTTY. They may operate primarily on 20 meters. QSL via 3B8DL.

ALAND ISLAND, OH0. Martti, OH2BH, and Jukka, OH2MAM, will be active in the Scandinavian SSB contest from the OH0W contest station. QSL via OH2BH.

CORSICA, TK. Vaclav, DL4FF, will be QRV as TK/DL4FF until Oct 10. QSL to home call.

CHAD, TT. TT6SE and TT6EB are QRV until Jan 15, 1998, using CW, SSB, RTTY and SSTV. QSL via F6FNU.

CHAGOS, VQ9. Look for Rick, WB0BNR, to be QRV as VQ9AI until mid Nov. He can be found daily on 20 meters around 1300z. QSL to home call.

GIBRALTAR, ZB. Jimmy, G3HBN, will be QRV Oct 14 as ZB2/G3HBN. QSL to home call.

Excerpts from the Ohio/Penn Dx Bulletin No. 324

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2YQH and WB2RAJ The 59(9) DXReport, W3UR and The Daily DX, WA4FFW, N5FG, K7ZD, OH2/K8MN, NN9K, AC0X, CT1EAT, DJ1US/5X1S, G4BUE and DX News Sheet, G0PSE, OZ5AAH, T77WI, TA3YJ and TA3J, VK4AAR and ZS6Y for the following DX info.

FO0, MOOREA ISLAND (Update). Giancarlo, T77WI, has received the callsign FO0MOT to activate this Polynesian island (OC-046). Activity will last until Oct 12.

JY, JORDAN. 'The Daily DX' reported that King Hussein, JY1, made a very rare visit to the bands this past week. His Royal Highness showed up on 14280 kHz at 2100z. QSL via WA3HUP.

S9, SAO TOME and PRINCIPE. Francisco, CT1EAT, reports to OPDX that he will be in S9 from Oct 21 until Nov 4. His planned operations will begin from Sao Tome Island (AF-023) from Oct 22-30, using the callsign S92FC. Activity will be on 80-10 meter including the WARC bands with operations on SSB, RTTY and RS12 satellite (Mode K). Francisco has requested the special call S97A to operate during CQWW DX SSB Contest only. He plans to be a Single/Op/Multi Band LP entry. Outside of the contest he will concentrate on RTTY. This will be his first time on this mode, so PLEASE be nice.

What is interesting is how pervasive Oregon Scientific is throughout
Europe as well as here in the states. I see their products sold
all thru Germany. I believe that Oregon Scientific is the manufacturer
of the weather station that Radio Shack sells. I have seen the same
equipment sold at Hamfests under other brand names. Oregon Scientific
seems to have a presence everywhere.

Thank you Glenn! Those few paragraphs say a great deal about 'discussion' concerning the telegraphy testing requirement. I suggested in a private e-mail last week to Larry, aka Yo Doc, that FISTS should make WA6VSE an honorary member.

Carl's actions and attitude are as devisive to the hobby/service as the telegraphy requirement issue is. The fact that WA6VSE considers ANY compromise solution as pandering does neither side any favors. Any suggestion that varies from what Carl desires is unacceptable.

I believe that Carl did receive the two e-mails, I have no reason to doubt that. AFA laughing it off, I don't know, after all this is the ninties. I wouldn't consider the e-mails to be death threats per se but I would consider my words and actions quite carefully when speaking/posting in a public forum such as the usenet. Let us not forget our names and addresses are readily available to all.

Your words were well spoken Glenn

Yep. Such seizures/sales occur all the time - under the guise of the
"war on some drugs". The take everything you own, including savings
accounts. Try to hire a lawyer, to sue in civil court to recovery
your property, when you have no money.

Greg Dean <n9nwo@gte.net> wrote:

> We do need to simplify. Most old timers like the system
> that we had in states before incentive licensing. Two
> classes.

I don't think many old-timers are left who remember that
2-class system, which ended in 1923 when incentive licensing
was introduced.

The first amateur licensing program, under the Bureau of Navigation
at the Commerce Department, was initiated in 1912.

From 1912 until 1923 there were two grades ("Amateur First" and
"Amateur Second") of license with identical privileges. "First"
guys tested at an FCC test, and "Second" guys simply certified
they met the qualifications, but could not go to an examination
because of distance or disability. Morse testing was at 5WPM
until 1919 when it went to 10WPM. The test was on rules,
regulations, adjustment and operation of equipment. There was no
test on theory, per se. During that period there was no incentive
to upgrade.

In 1923 came the first "incentive" license, named "Amateur Extra
First Grade". This grade, which required 2 years in a lower grade,
20WPM code, and a theory test, gave the licensee a distinctive
call sign and additional wavelengths above 200Meters. In 1929
these licensees also got new phone privileges on 20 meters, and in
1932 they got phone privileges on 75 meters.

In 1933 all three grades were renamed and would remain basically
the same for 20 years.

"Amateur Extra First Grade" became "Class A". It retained the
harder theory test, and also kept the 20 and 75 meter phone bands,
not available to other classes.

"Amateur First" grade became "Class B", and what used to be
"Amateur Second" became "Class C". This was a carbon copy of
"Class B" with the test given by volunteers. Otherwise it was
exactly the same as Class B. These two class did not have phone
privileges on 20 or 80 meters, so there was a big incentive to
upgrade to Class A.

In 1951 there was a major change in licensing. We went from 3
license classes to 6.

Class A became "Advanced" and was the lowest "full privilege" class.
Class B became "General".
Class C became "Conditional".

A new class called "Amateur Extra" was added. Note that this is NOT
the same as the previous "Amateur Extra First Grade" which was
the "father" of the current "Advanced" class. "Amateur Extra"
had the same privileges as "Advanced".

Conditional was simply a "mail order" version of General for people
a long way from the FCC. Tests were progressively more difficult as
you moved up the ladder from General, including 20WPM at Extra.

Also in 1951 came two other new classes, Technician and
Novice. The Technician took the General written test and a 5WPM
Morse test. They had privileges above 220mhz (no 2 or 6 meters,
and no HF).

The Novice class initially had CW privileges on 80 meters and
11 meters, and voice on 2 meters. This license had a term of one
year and could not be renewed, but you could simultaneously hold
both a Novice and a Technician license.

Two years later, in 1953, there was some relaxation in incentive
licensing, as 20-meter and 80-meter phone bands were opened to
conditional and extra.

Some upgrade incentives were left in place, such as Technicians
could upgrade to Conditional/General by simply taking a 13 WPM
Morse test, and thus gain HF privileges.

In 1968 additional incentive rules were applied to HF, dividing
4 of the HF bands into segments for General, Advanced, and Extra
licensees.

I wonder how many of those oldtimers from the pre-incentive "2 class"
system are still around? They would now have been licensed for 74
years, minimum.

Ned,

Consumer electronics is one of the few things to actually decline in price based on the operative CPI. That National HRO actually sold for about $2,200 in today's dollars. The SX-88 of the 1954 era aold for about $4,000 in today's dollars and a KWS-1 - 75A4 combination sold for about $9,000 in today's dollars.

A good rule of thumb when calculating in constant dollars is... 1946 - 1950 multiply by 6.5 1951 - 1955 multiply by 6 1956 - 1963 multiply by 5
This will get you in the ballpark.

In the CQ Almanac, there is a list by year of birth for amateurs. There
are several years of birth which would be compatabile with this.
Compared to the total number, there are not many.

hi all, i am doing a paper on meteor scatter and i'd like to get some personal interviews. I'm looking for information on your station, some of your contacts, ease of use, where you made the contacts from (what was the location like? hilltop?), what your best dx has been, and how often you work scatter. I'm also looking for good websites and the dx records for 6m, 2m, and 440. please respond through private email to mbarr8it@mwc.edu. thanks
mike, who is going back to digging through back issues of cq and 73.

Early 80s Fox Tango Newsletters told about two ways. One was official Yaesu mod kit which apparently didn't work well. Other was rather detailed and complicated do it yourself mod which apparently did work OK. I think you'd be better off to forget it. My opinion only, of course.

> 1950 to 1997, for gear with similar components
> and construction.

Ned,

I can not disagree with anything you say. Yes you would have to take into account the tube vs solid state construction as well as the economies of scale with mass production techniques. As you say, those National receivrs were virtually hand crafted. However, industry was geared up to produce the tubes, tuning caps, and bandswitches which have been technologically outmoded today. With the Marantz and the Dynakit, there is no one producing parts to any large extent. Small runs mean high prices. If the

transister or IC were never invented it would be interesting to see if electronics would have in fact decreased in price in terms of todsy's dollars.

On the other hand, automobile production has been automated to a large extent. I did a little research today on the cost of a Chevy 4 door full size sedan in 1951, and it was about $1,800.
If the CPI held true, that should be about $10,400 today. The full size Caprice, last I looked, sold for about $22,000, or twice the rate of the CPI. of course there is more equipment and light year ahead technology in it. A house is another interesting example. My house new sold for about $12,000 in 1958. not it appraises at 13 times that amount. New construction for the same size home costs even more. Take a look at health and auto insurance costs from the same time period, or the costs of a college education. Maybe the CPI has been misfigured all these years on the low side?

Dear Wayne Wilson,

Bill Cheek who is known world wide for his scanner books has an source of information within Radio Shack that told him about the mere request that the FCC has asked Radio Shack to follow. RS is whimping out on its customers merely because the FCC has asked them to withhold data from the its customers.
The FCC knows full well that this would not hold up in the court room, which is the reason the FCC has not issued any new rules or attempted to outlaw publications! It simply cannot do this!
If Radio Shack cares more for what the FCC merely "asks" them to do rather than the needs of their customers, then Radio Shack will loose many long term customers to the many businesses on the net who don't care one whit what the mere requests are of this intrusive federal agency.
It certainly appears that Radio Shack is all too willing to ignore the First Amendment rights we all share in the USA and bow to pressure from the FCC.
You stated plainly that the FCC "asked" you to withhold scanner schematics.
Wayne, I am not upset with you, but with Radio Shack and its willingness to turn its back on customer and the Constitution.
Please forward this letter to the President of Radio Shack, or give me his e-mail address and I will contact him.

Thank you for responding to my letter.
This letter will be posted world wide.

Some time ago Ulrich Rohde published some circuits of mixers made out of an array of switched amplifiers, each one being one of the transformer-feedback bipolar transistor type. His published results were quite good.

> The main benefit using of 7360 in mixer configuration is from fact
> that it always works while being in it's most LINEAR range - 100% of
> time!
>

You seem to be making the assumption that the switching process of the beam deflection tube does not affect the linearity of the beam modulation process. This will not be strictly true if any of the deflection field has any influence on the electron gun region. Also, the electron beam modulation by the incoming signal will not be perfectly linear, any more than we could make perfectly linear triodes, tetrodes, pentodes etc.

The 7360 was certainly excellent, but it was not perfect. I have wondered about making a double balanced mixer with a pair of matched 7360 tubes....

> On contrary - almost all other devices used in mixers circuits
> are driven from its best linearity point (at least - for a little
> fraction of time) by heterodyne and much smaller interferences can
> distort
> useful signal at these moments. No matter what devices are used -
> linearised or not, bipolars, FET's, or tubes, no matter - how many
> gates or grids are used for mixing. All they are in NONLINEAR region
> at these moments!

Consider the transistor tree mixer such as the Plessey SL6440 or Motorola MC1648/MC1496 families. The signal applied to the "tail" transistor is amplified in a device which is 110% of the time biassed into its most linear region, the signal current it produces is diverted by the transistor pair above it - this resembles the beam deflector of the 7360 very closely. However, their performance is not in the league of the 7360, nor of the latest crop of switch-mode FET mixers.

Structurally, the 7360 was far ahead of its time, and the actual power level it was capable of running gave it the advantages of brute force, too. Together these advantages made an outstanding mixer. At a time when most receivers (though there were a couple of honourable exceptions) had mixers with third order intercept points in the 0dBm region, the 7360 was in the over +30dBm class (I made one and measured it about 15 years ago)

It has taken many years, but semiconductor mixer technology has finally caught up.

> 7360 uses beam deflection for heterodyning - this doesn't act on
> linearity.

There is a small effect of the seflection fields in the electron gun area that does have a small effect on the linearity of the modulation of the electron beam, giving some non-linearity due to the oscillator signal, and the modulator itself has its own non-linearity problems. It is not perfect, but until fairly recently, it was the best.

> And if you like brute force - 4CX250 (four pieces) in double balanced
> configuration is the best solution...
>

This isn't really a beam deflection approach, it's a tree mixer, I suppose. Beware that the 4CX250 was designed entirely for AM class C and FM use, its linearity is poor compared to tubes designed for linear operation.
With the amount of brute force possible, of course, the result would still be extremely good, though a more linear triode of comparable power could be even better.

> Xcuse - if I was speaking abt well-known things. I just pointed to one
> aspect

It's an area I've had a long term amateur interest in, and I've also been involved professionally in extremely linear receiver structures for measuring equipment. I'm enjoying the discussion immensely!

> of the problem, and agree 100% (almost ;^) with you, oldtimers,
> elsewhere.

Ooops, a few friends who read this group will start teasing me about that! I don't feel like an oldtimer. I'm 43 years old, though most people would tell you that my mental age is a lot less than that :-)

> Had a great pleasure to read!

Me too

Cheerie hi Jason from Maine...
You raise some interesting questions...
The only thing I can add is that age has a lot to do with it as
well....the age distribution at a hamfest is not the general
population as well...
Many hams grew up with radio before the TV years and when
the US was a different place ethnicly and gender opportunities, etc.
These older white males of which I am one carry their nostalgic
memories with them and still shape amateur radio. It can change
but it will take another generation...that is not all bad because some of the
values skills and knowledge need to be preserved
along with change for the newcomers....
Balance is the key word I guess...

IMHAPO, assuming that the views of a few folks who may have rejected your
proposal apply to all who might hold pro-code test views is not
statisically valid. . . and probably not even close.

I don't think that your conclusion properly considers possible reasons
for the few rejection "data points" you are using to justify your
conclusion. I wonder whether they were rejecting the ideas or the
presentation?

It's not whining. It's called "pride in ones achievements."

It seems a lot of people don't seem to value that a whole lot these days.

If you can't jump over the bar, lower it, right? Soon we'll be able to
step over it.

Why stop at 20wpm? Make it 200wpm and you will make the people who
want to kill ham radio even happier.

Finally, an astute observation of what is really happening here! Very
astute!

I can only speak for WK1V. If you go back and read any of my posts on
this topic you will see my tone is centered on the tone of the
presenter. Do you notice a pattern?

Logical presentation begets logical debate and responses. Illogical
presentation begets illogical adjectives, pronouns, and what have you.

I'd consider the term "asshole" as perhaps a better description.

>I'm sure that's
>why I was singled out by the cretin ...

What's laughable is your naivete, you and others like you (Burt Fisher
comes to mind) make lots of *VERY* controversial posts on usenet and
then you *cry and act *surprised* when you get a little *action*

If I posted a lot of messages denigrating large numbers of people I'd
fully well *EXPECT* to receive all sorts of replies/harrassment/death
threats etc. there wouldn't be much that *would* surprise me. Your
(evidently) feelings that usenet follows some kind of "Roberts Rules
of Order" proceedings is one of the things that make your postings so
comically enjoyable ;-)

I am currently out of work and am forced to sell some stuff to pay
bills. Here is my list. All equipment works 100% and is in either
brand new condition or dam close. Prices are firm and you pay shipping.

Radio Shack PRO-62 with brand new NiCad rechargable
batteries, antenna & AC wall charger/adapter. This hand held scanner
receives:
30-50, 118-174, 380-512, 806-823.9875, 849.0125-868.9875, 894.0125-960
this radio has not been modified. It is in excellent condition and has
only been used indoors as a base scanner. 8 months old paid $299+6%
sales tax.
FS: @ $175

Motorola SP-50 Hand Held UHF 2Channel - with 1 battery, antenna & drop
in rapid charger with slow charge option. This radio is in brand new
condition
and is less than 4 months old. It is currently programmed for 2
channels in the 460Mhz band. I paid $389+$49 for the rapid charger.
FS: @ $275

Yaesu FT8500 2M/70CM Mobile w/Deluxe Microphone - Yaesu
programming software, programming cable, Mars/Cap mod, tone decode board
installed, attractive microphone stand, box and all literature.
You don't even want to know what I paid for this (Way too much!)
FS: @ $590

One other issue: I wonder how many of the "Know Code Junkies" that practiced so hard to get their ticket 17 eons ago could still pass the same test today. HA! They're chattering on SSB like all the rest of us. I'll bet most of them would have to sweat through the 5 wpm Novice test, if they could pass it at all.

Will the code/no code argument ever end? I worked hard to learn and pass the code requirements for various licenses almost 30 years ago when there was a justifiable need for morse proficiency. That need just does not exist today. Why bar many bright minds from this hobby only because they could care less about learning to send and receive information in a quaint, dated, and nearly dead mode? In case most haven't noticed, even the Catholic church stopped using Latin some time ago! There will be those who choose to use morse and there is nothing wrong with that. Let those that want to enjoy morse for as long as they wish but lets stop forcing an obsolete and irrelevant morse requirement down the throats of the newcomers who might just keep this hobby alive.

Hi and thanks for reading this posting,

I have recently taken over the programming for our club repeater and I am experiencing a few difficulties. I have tried to contact CAT over the Internet at their web page but it comes back URL not found. I have tried their telephone # but it is no longer in service. I am now wondering if the company has gone "belly-up" hi.

If anyone has a valid URL or telephone # I would appreciate it, failing that if anyone is currently using a CAT-300 and is familiar with the programming maybe you can give me some pointers.

Thanks and 73 de Larry VE3YET.

Why is it in our society today that we have to make everything easier for everyone. They don't want to do higher speed code, the written test is too hard, the radio has too many buttons and they can't operate it, ect... When I decide to upgrade I want the test to just as difficult or more as it is now so no one can say that I didn't earn it, or they have a better license than mine. See I can whine too.

There is no "First Amendment right" to view schematics.

I am a product manager for a major electronics manufacturer. We do not release ANY schematics to the public, nor will we ever do so. This has nothing to do with FCC or the Bill of Rights, but simply with making it a *bit* more difficult for competitors to duplicate design details.

> Wayne, I am not upset with you, but with Radio Shack and its

Your innuendo vis a vis "suspect details" says a lot, Steve ... despite the
fact that you and I disagree on many things, I would not question your
integrity if you had stated that you had received threats ...

>You have publically made statements. It is well within my
> realm to see if they or are not truthful. So far, they are proving to be
> very UNTRUTHFUL.

On what do you base this conclusion? You have not been privy to all
of the evidence or the communications with the ISPs and law enforcement.
How the HELL could you know SQUAT other than that I said I had received
threats???

> Quite frankly, in cases of alleged threats, the last
> thing that would be done is to continually make the ongoing case public.

I simply mentioned what had happened ... then you, MD, Yo Doc and others
called me a liar and said "it never happened."

> > Nobody is talking about "slander/libels, etc. etc., etc." ,... I can handle
the

>perception.

Ham radio licenses are FREE. As I see it, all it requires is a little
dedication and effort. A decent HT (Radio Shack 202) can be had for
$120 at any hamfest.

>2. It's no secret that a Latino or African American with a technical bent
>is considered more "out of it" than a Euro American with a technical bent. This
>means that as hams, we have a stake in correcting society's inequalities.

I'm cool with being a geek...I don't think most of us see color, race,
or anything else except our existence as amateur radio licensees.

>3. Factors 1 and 2 also apply to women.

I'm involved in teaching a class; it's 20 men, 6 women. As I see it,
that's pretty good. Could be that men are more comfortable in being
geeks than are women. I dunno. Never have. A ham is a ham, and
a communicator is a communicator. My sister is KC7QLZ. She's female,
an engineer, and no geek. But if she were, she'd be able to handle that.

>4. Unfortunately, I have no explanation why there are few Asian American hams
>(which do not also apply to Euro American hams). Any ideas?

I've tested probably dozens of Asian-American hams in 10 years as a VE.
Might some of it have to do with language differences? I don't know
too many Asian-American CW operators, but the few I know are quite good.

Let us not forget that there are over a MILLION hams in Japan.

Aha you're only 40 something and already sitting up noticing things.

How is the FCC and ones ham/commercial license related to someone
sending you a .jpg of a gun pointing at you via e-mail ???

>... sending death threats via public telecommunications networks
>IS ...

>
>The fact that you don't use your callsign and name only indicates that
>you don't have the balls to associate your posted drivel with your name
>and callsign for all to see ...

No, by using my AOL address it eliminates the threat of mail-bombings.

When dealing with people (like you) whom I consider to be glassy-eyed
fanatic zealots with a limited/non-existant sense of persective, I
prefer to keep my residential address somewhat confidential.

IMHO your traits are on the same track as those of an individual I
followed in another newsgroup. His particualr bogeyman was
"socialists" (instead of pro-coders.) He was *almost* as profuse as
you are (pro/no code postings) in his postings about "socialists." He
became *so* impassioned about the "socialists" (read pro-coders for
you) that he was fired from his job for driving everyone nuts with his
drivel. (Ever spread the no-code gospel at work Carl?) He blamed his
firing on "Rich Socialists" (Ye Olde Farte Pro-Coders ????) and went
out and chained himself to his city's federal building (Carl chains

self to W1AW tower ?????), assaulted a federal officer who was trying
to unchain him and wound up in the cross-bar hotel. (Jail)

IMHO you're on the same track Carl and it's with *MUCH MUCH MUCH*
comic relief that I watch this being played out ;-)

I don't have the answer, but your observation is nothing new. The ARRL
a while back published some information in an issue of QST where they
indicated the "average" ham was an affluent white male.

Since the FCC doesn't capture racial data, its difficult to analyze what
the exact composition of the racial structure of amateur radio is. I
would suspect, however, that given amateur radio has been until late a
primarily technical pursuit, and historically members of certain racial
and socioeconomic groups have had less opportunity in these areas than
others, that these trends will be reflected in amateur radio.

I have a portable Uniden Communication Receiver CR-2021. This receives 150khz-30mhz AM/FM/SSB/CW with a narrow & wide filter. This radio is digital with digital memories. It is in average condition and works well. It is missing the battery compartment cover in the back, the Light on the display cannot be turned off, and the internal speaker does not work, but if you plug in headphones or an external speaker it works fine. It has 6 memories in each mode and I have the original manual. The DOM was 1984.

I bought this from a friend of mine who was selling a recently deceased ham's shack. This would be great for anyone who wants a beginer or a spare Shortwave radio receiver. Its all black plastic with a working antenna and has a nice carry handle with AC power cord and can be powered by DC.

I thought that for $30 it was worth while to see what SW was all about. I decided that SW is not for me and my wife does not like the long antenna that I strung through the house. I had my 3 months of listening fun and now I'm done.

To anyone interested the price stands at $30 + shipping.

If you want any other information on it please email me directly andrew@tropicom.net

And, in case you are concerned about receiving the WWV signal, the time calculations displayed on a GPS receiver are actually transmitted from the individual GPS satellites, each of which carries two atomic clocks (one "high precision" and one "medium precision". Not WWV, but still VERY accurate. In fact, the accuracy of the transmitted time signal is one of the key factors in the receiver determining the accuracy of your position.

If you don't want me to listen to your conversation, then you better
figure a way to keep the signal from invading my property or else
encode your signal.
If I don't want anyone to hear my phone conversation, I don't use
a cell or cordless phone.

I too would welcome a ready source of information for the publication, Q-Bit, which I edit for the Wellington VHF Group. The rec.radio.amateur.

newsgroups are very useful sources, although the signal to noise level is poor. Still, I have managed very well over the past 3 years or so. I trawl the newsgroup items and if a posting comes up that seems interesting or can lead to a useful idea, I make use of it. Asking the originator for permission to use it if it is a significant item is normal.

I post the bulk of each month's Q-Bit onto the web - see www.nzart.org.nz/nzart/branches/branch74.html The parts you won't see are the trading table adverts, ham ads, and some technical items which the contributor does not want on the web for copyright reasons. You can subscribe for $20 US.

Of course, you need to establish what your newsletter should contain. Besides club notices, I like to print technical articles (pitched at the

appropriate level of course, and though we have qualified radio engineers, there are many who knew enough to get their licenses, and others like me who cut their teeth on hollow state devices). There are many subjects I would like to have articles on, but the problem is to find someone to write them or spend time myself writing it. For instance, I would like to print something about DQPSK and QAM for those

who are not radio engineers. It's time that we had an article on AX25 - unravelled, and ditto on JNOS - or any of the other NOS's. As normal, those who are the experts are very busy and I can't press them too hard.

And there is less than 6 months before I will need a spoof item for the April issue :-)

Do other editors put their publications on their club web sites? If not,

why not. If so, please give us the URL.

Jim Parnell, ZL2APE
Editor Q-Bit
Branch 74, NZART - Wellington VHF Group.

Charlie:

I passed my 20 WPM test only 16 eons ago, but I can do it all over again, any day of the week. The only requirement I impose is a $50,000 bet with whomever my "challenger" is. I did it for free for the FCC 16 years ago; everyone else has to pay!

Now, your typical Extra-class SSB user may have a problem...

There are legitimate reasons for retaining morse code testing today.

>Why bar many bright minds from this hobby only because they could care less
>about learning to send and receive information in a quaint, dated, and nearly
>dead mode?

Are you aware of any professional study which indicates "many bright minds"
are *NOT* becoming licensed specifically because of the morse requirement?

This "bright minds" claim is nothing more than a complete, utter fallacy.
This was the same claim that no-code supporters used in the mid/late 80's
to publically justify a codeless VHF license. Guess what? It wasn't true
then, and it certainly isn't true now.

Reading this newsgroup, one gets the idea that ham radio is indeed a
very uncivil hobby. Fortunately, the real thing is actually much
better than this manifestation on the Internet. Except for 75 meters,
of course...

Jim's comment is quite appropriate. The pro-code folks
eem to constantly attach some sense of greater
worthiness to those that learn morse as if it is a
badge of honor. The reality is that doing something like
code is and should be only a discretionary undertaking.
It has nothing to do with being lazy any more than buying hamburger

This is an interesting view - considering what [we] do here
(basically eves-drop).

My speculation is that someone came up with the concept of cellular
phones. Sometime during the design phase, some engineer informed the
marketing group that the cellular calls could be received by someone
with a scanner, and that the callers will be pissed. The marketing
group said "screw everyone - we'll let them fight it out".

Basically, imagine a construction company building houses, but not
putting up doors - then, when the homeowners get cranked-off at
strangers wandering thru their house, the construction company
says it's not their fault. :-/

"outside interest shills"? you mean, someone who would make the observation I did, working for, and for the benefit of, the outside interests?
Could be, but I don't see how a call for a unified front among hams would benefit those outside interests.
Or do you mean someone fomenting hate and discontent between the factions of the amateur community on the principle that a house divided against itself cannot stand? Like maybe the pro-no-coders are outside-interest shills?
Could be. Makes sense.
A unified front is still the best defense. I will do my part--after being licensed since '79, Extra since '81, commercial ticket since '82, I think I'll buy a microphone and find out how the other half lives :-)

You cant be this dumb. There is a huge difference between taping into
a wire to listen to you and using a radio to hear the signals YOU are
sending into my home!

Ill get a life, but you need to get a brain!

"Please Daddy Bill...Save me from those mean ol people out there with
scanners! Daddy, they might hear me and that would make me so mad
daddy! Please Daddy Bill, make them go away!"

401. FS: R.L. Drake " old logo " golf caps

Subj: FS: R.L. Drake "Old Logo" golf caps
Date: 10/09/97
To: drake-l@fablotz.min.net

ATTENTION: Drake Amateur Radio Equipment Owners / Collectors

The Drake Amateur Radio Club, with the permission of the
R.L. Drake Co., is now offering Baseball\Golf caps featuring the
"OLD" Drake logo, used on most of the Drake amateur radio products.

The caps are California Blue in color, which is as close to
"Drake Blue" as we could get, and the white and black logo measures
1 inch high and 5 inches wide across the front of the cap.

USA Cost $15.00 each, shipping included. Outside of USA,
E-Mail "DRAKEARC@AOL.COM" and request the charges for shipping
to your QTH. Please provide your complete shipping address.

Caps will be shipped from the R.L. Drake Co, Franklin, OH production
facility.

To order, send a MONEY ORDER for $15.00, (per cap) US funds, made
payable to: "Drake Amateur Radio Club" and send to the address below.

Drake Amateur Radio Club
ATTN: Radio Room
230 Industrial Drive
Franklin, OH 45005

Be sure to send a cover letter along with your money order providing
the number of caps ordered, your name, address, and a daytime phone
number (or internet address) and any special shipping instructions.

NOTE: PLEASE DO NOT contact the R.L. Drake Co. for information
about or to order caps. This offer is made from the Drake ARC and
it's members. For additional information, or comments, you may send
E-Mail to "DRAKEARC@AOL.COM"

The members of the Drake ARC, thank for your support.

CB was intended for regular folks as a means of communicating between base and mobile stations. The rules limited input power to 5 watts and restricted antenna height. You were required to have a license and communicate within set rules for proper conduct. At that time no one expected it to turn into the mess it is now. The FCC threw up there arms and so all well so what! CB is not and was not intended for international communications. Obviously 27 mhz was not a good choice.
Lets be honest guys. The only real argument against code tests is to make it easier for non ambitious individuals to upgrade to HF privilages. The code is law. If you want to upgrade then learn the damn code and shut the F_ _k up!

Lotsa luck. It is NOT illegal to listen to cell phone conversations. It
is only illegal to disclose them to a 3rd party. If you recall a while back
the big flap about someone taping Newt Gingrich's cell phone conversations
and even publishing it and selling the tapes.
They were in blatant disregard of the law - but because they were big
Clinton supporters, they were never prosecuted. Now, if such an obvious
case was never prosecuted, how much do you think the average casual scanner
dude is going to worry?

:
:I didn't say I was expecting privacy from such an unsecure medium. I am
:not naive, stupid, or lacking in common sense. What I'm saying is that
:it isn't ethical what people are doing with scanners. And I hope that
:they get caught & are heavily fined. IMO, such people deserve such
:treatment. There would be a LOT less people invading other people's
:privacy if the laws were enforced. The way the FCC is handling amateur
:radio pretty much indicates the enforcement we'll see (unfortunately).

I will admit that the morse code is rather old fashion and I
personally have not used it since the mid 70's but of those who are
being licenced today under the nocode licence if find too many of them
have little understanding of such things as swr antenna couplers hf or
vhf operating procedures.
One the positive side, many of those amateurs, once they get a taste
of being strickly limited to above 30 mhz, soon find their way to the
code and theory classes to get on hf. Granted many are using voice,
on hf, but it is surprising, and good news, how many are admitting
that cw is a large part of their amateur career/hobby time.

Hate to burst your bubble, but it is NOT a matter of "building illegal scanners"
The law only covers sellers and manufacturers from SELLING them (except to the government.. hmmmm). There is no regulation covering any modifications by the end user. Neither is there ANY regulation covering the use of a down-converter so that you can pick them up on an unmodified scanner.
Not to mention that there are 100's of thousands of pre-rule scanners that work just fine, and are totally legal.
And another quirk in the stupid law is that it only covers SCANNERS - if you have a continuous coverage RECEIVER, such as the fancy Yaesu that cover the whole spectrum to 2 gigs, they are 100% legit to sell.
Stop looking for a nanny at the government - the law is totally unenforcable and was passed for purely political reasons - and the FCC testified to that effect before congress.

I picked up a used Butternut HF6V at a swap fest two weeks ago. I sent e-mail to Butternut Customer Service (bencher@bencher.com). I got an e-mail response from a Customer Service rep the following work day. They are sending me full tuning instructions, the diagram, the parts list, and the tuning instructions for the 160m coil -- all for US$5.00 (I offered to pay for their costs in sending me the information, as they made no money on the swap fest sale).

I have the following, and would like to trade for a dual or tri band mobile and/or dual or tri band desktop. I'm looking for something no more than 3 years old. Here's what I have:

-Kenwood HF SSB Transceiver (TS-180S) with 160, 80, 40, 20, 15, and 10m bands. WWV (10.0 MHz) SSB/CW/FSK, desktop mic (Kenwood MC-50), speaker (Kenwood SP 180), and power supply (Kenwood PS-30). Has D.F.C. memory unit upgrade.
-DenTron MT-3000A Antennae Tuner and DenTron linear amplifier MLA-2500B.
-Computer Patch Interface by (Advanced Elec Apps, Inc model CP-1)
-Hybrid Phone Patch (Heathkit HD-15)
-Beam antennae rotator (Alliance Dual Speed Control)
-Vibroplex key.
-Microlog Corp's ACT-1 TTY.

Feel free to make a cash offer.

Here in Canada, back around 1980, they tried a nocode licence which
emphasised technical knowledge. When they changed the regulations,
again, and disolved this digital licence, approximately 10 years
later, I understand that there were approximately 250 digital licence
holders of which 150 already had their amateur licences.

I don't think the nocode licencees are lazy. I know of many amateurs
here, in Canada, that got their nocode licences and within a few
months started learning the code so they could gain access to the hf
bands. I also believe that they intend to also use cw on the hf
bands.

Hi Mark
I don't know what you consider dxing on 2 meters but if you have an
all mode transceiver and tune between 144.0 and .2 (I think) during
inversion conditions you should find those interested in making long
distance contacts doing their thing. Much of the weak signal work is
done at the bottom 100 - 200 khz of each amateur band (depending on
the band).

The bottom 100 or 200 khz of the bands above 30 mhz is general given
to weak signal operation, cw/ssb etc.

I wonder if the amateurs will get additional space, when the tv
channels disappear?
I find it hard to believe that the powers that be would give all that
new space to the commercial services.

The answer is simple.....Hit Tandy/RS where it hurts! Don't buy there products.
I never buy any Ham or Scanner gear if the seller/manufactuer won't supply a C/diagram!
It normally means the gear is crap and the manufactuer does not want you to see how bad it is.

If we hams continue to bicker among ourselves enough, the outside (commercial) interests trying to snag/steal/buy our freqs will have a much easier job of it. We hams as a community do not have the resources to fight them with dollars...
We can learn from the bikers here--as long as the various motorcycle organizations are at war with each other (Honda-people-vs-Harley-people, etc) they can not present a united front against the common enemy. I do not want to start a thread on who the biker's common enemy is; I simply wish to point out the concept of presenting a united front.

I could care less about listening to wireless phone conversaations,
but it is amazing how patently naive people like this poster are as to
the total lack of any assurance of privacy can ever exist for radio
signals that are unencrypted. They forget that there are thousads
of existing scanners that were made tat don't even need modification
to receive the cell frequencies. They forget that there are millions
of scanners and receivers that exist which can be used to receive
cordless phone frequencies. These people seem to think that passing
a law will actually stop those that want to from listening.
Talk about a lack of common sense.

Your intentions are good Larry but a couple of things, 1. The spammer
doesn't (unless he's really brain dead) come back and look for replies
to his spam postings (sometimes 1000's of newsgroups), he waits for a
phone call/check in the mail(I prefer sending dead rats)/access to
his web site etc. for his particular get rich quick scheme. 2. It
appears you're using MS's Internet News which is bundled with Internet
Explorer, but this isn't the "Web", it's usenet (Usenet News Groups)
and is a completely different service than the "Web."

I'd have just e-mailed you but my !$&^&$&%&&% mail server is down.

Please don't misunderstand my original post. I am not pro code nor do I use it. I also don't call people who do or not use it names or try and make fun of them as some do in this group. I am strictly a HF digital mode (PACTOR, RTTY, GTOR, AMTOR, and soon to try Slow Scan) and 2 meter FM person. I don't think a code test should stop someone from upgrading if they really want it. To pass an amateur radio exam is an accomplishment for anyone. I just do not want my upgrade to be less than those before me. It is also not problem for me to drive a car as I don't own a ox and I buy all my food at the local store.

Not such a dumb question. Legal Citizens Band transmissions are limited
to very low power (does anyone remember if it's 5 watts or 7 watts?)
and hence are of little concern to the international community.

I also think the CW requirement may only affect amateur radio bands.

As far as I know HAM radio is exempted.
I am in favor of any bill that blocks the monitoring of "private
conversations". HAM radio is not "private communications" ...
HAM radio is on the public airwaves and can be heard by anyone with a
radio that can tune the ham bands. Hams at my ham clubs are in favor
of this bill's idea (I have not seen the actual bill ... just heard it
talked about at our club meetings).

W4SCO

I am also a private pilot and communications on the aviation bands is
also not "private" so it should not be affected either.

447. FS in UK: NEW MFJ 9420x 20m SSB xcvr, £200

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-09 00:00:00 UTC
From: dvhunt@es.com
Message-ID: <876423214.8427@dejanews.com>
Source record: 189150
Cross-posted to: uk.radio.amateur,rec.radio.swap,rec.radio.amateur.misc

I have a brand new, unopened MFJ 9420x 20 meter SSB transceiver that
I would sell for £200 in the UK. I live in the US but will be traveling
to the UK on business and will be in London on Sunday, 12 Oct and in
Bristol from 12 Oct to Saturday, 18 Oct.

I will not ship it, but if you could meet me in London or Bristol while
I am there, I'll sell it. (I bought the radio for myself and received
it today, but considered how much it costs to buy one in the UK, and
figured I could help somebody get one for a reasonable price.)

If I don't get an offer by Friday evening Mountain Time in the US, I will
not be taking the radio with me. (BTW, the radio included the MFJ mike.)

Anyone mates out there interested?

Thanks,
Darvell (N7LN)

If you don't want me to hear it, do it on a land line! You are free to listen to me when I use my cordless, because I didn't want it heard by people like me, I use a wired phone!, or my DIGITAL Erricsson cell-phone... I know the latter isn't foolproof, but it's pretty safe for now.

What a bunch of lame excuses. I know you wouldn't wiretap someone's phone lines. What makes you feel that building an illegal scanner to spy on their conversations is any different. Sure, their signals have invaded your home, and they are doing immensely damaging things to you, and your only defense is to listen to them. GET A LIFE! Better yet, get a CB. Those guys want to be listened to, and it's legal.

>Those clocks look pretty cool but don't GPS receivers have a time display
>that's super accurate? For the price of one of the ZEIT clocks you could buy a
>GPS unit. Two toys for the price of one... ;-)

All GPS receivers know the time to sub-microsecond accuracy internally -
it falls out of the navigation solution that they have to perform.
However, only some board-level GPS receivers have an output that is
synchronized to that time. For example, the Garmin GPS 20 has an output
signal that is usually within 1 microsecond of the beginning of each
UTC second. Other manufacturers have (more expensive) receivers that,
in certain modes, give about 50 ns accuracy.

But the cheap handheld GPS units do *not* provide this accuracy. Their
LCD display of time can be up to a second off, and the NMEA serial data
output generally isn't synchronized to the correct time either.

On the other hand, you can get GPS time just about anywhere that you have
a decent view of the sky. WWVB propagation is not that good.

Dave

453. NCX-3, HF6V, TH-79A info needed

once again I try the ever-helpful Net ..

I recently got hold of a National NCX-3 and a Butternut HF6V, both without manuals. The NCX-3's power supply connector was demolished by the previous owner's cat (presumably with a little help from Mr. Gravity) and I can't seem to get the wires connected to the right pins. A schematic would help me immensely, especially with a manual that could give me a better idea of how to go about tuning up the transmitter final. I can probably figure out the IF alignment if I can just get it working.

I also need the tuning info for an HF6V. Like the previous, I can probably get by on guesswork, but it takes so long and I hate to duplicate someone else`s work. Email would be fine for this; I don't really need a manual all that much.

Finally, I'd like to find the UHF wide-band receive mod for my TH-79A. I know there are two diodes I have to remove, but which two, and on which board, and do I have to remove both if I only want to receive? (Email definitely for this one -- no need to broadcast to the world..)

Thanks all, and 73! One more crack at the code test and I should be a General by wintertime .. right now I'm a 'code-challenged' General .. ;-)

Another consideration is battery life. I have yet to see a GPS that runs for more than a few hours on penlight batteries, but the cheapo Radio Shack WWVB clock I bought last week runs for <N-yet-to-be-determined> weeks/months on 2 AAA cells.

Also not all GPS units will work indoors w/o an expensive ext. antenna.

My RS clock seems to be picking up WWVB sufficiently well in the SF Bay Area CA, and the WWVB web site says there are improvments planned that will make the signal even stronger.

457. New Task Force Promotes Foxhunting

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-10 00:00:00 UTC
From: homingin@aol.com
Message-ID: <19971010144001.KAA12580@ladder02.news.aol.com>
Source record: 189010

The World Amateur Radio Direction Finding (ARDF) Championships were held last month in Germany. Hams and non-hams from dozens of countries gathered to see which of over 250 entrants would be the individual and team winners in this outdoor sport that combines transmitter hunting and orienteering. Unfortunately, no hams from North America took part. We're missing the fun!

A small group of radio-orienteering enthusiasts in the USA and Canada have banded together to start filling the gap. The new ARDF Organizing Task Force will help and encourage hams and ham clubs on our continent to sponsor international-style foxhunts at the local, state, and national level. One of our many goals is to have a sanctioned IARU Region 2 (North and South America) ARDF Championship foxhunt in the summer of 1999.

Here is your chance to get in on the ground floor. We are seeking ARDF Points of Contact in cities and towns all over the USA and Canada. If having lots of practice hunts, identifying and training future radiosport stars, and participating and national and international foxhunting championships appeals to you, drop me an e-mail and we'll put you on the Point of Contact list.

For more information on the sport of ARDF, see the "Homing In" Web site:

http://members.aol.com/homingin/

Don't forget the forward slash at the end. At this site, you will find several pages devoted to on-foot foxhunting, plus links to ARDF sites around the world.

>
And the way Newt got burned is by a couple listening (against the law) in their car ... then making a tape (against the law) ... then sending that tape to a democrat congressman (against the law) ... who then committed a federal crime by playing that tape to the public. But because he played the tape on the floor of the House he is protected from prosecution.

I wonder ... has that couple been prosecuted under the federal statues yet? They certainly should be to the maximum extent of the law to set an example for others!!!!

I discovered that fact some time ago. Never listened around much.
Best if you have an old fashioned rotary dial tuner.

The downconverter would seem to byppass the legality of using a scanner
on those frequencies.

I have been a licensed Logmaster Plus/Plus user for several years. When upgrading from Win 3.1 to Win 95 I chose to save my data on tape but reload my applications from the original disks (ie, reformat hard drive and load Win95 from scratch). One of my Logmaster Plus/Plus program files had been updated on 23 JAN 96 via e-mail from the vendor because of a program bug and was not on the original program disk.

I have not been able to contact the vendor by mail, email or phone to request the one updated program file and so have the original bug back in the report writer. If you have the Logmaster Plus/Plus program and might be willing to help me please contact me directly by e-mail at billbird@mo.net

Thanks,

Bill

I personally know a good half dozen people who are solid
at 50 wpm. I used to think, "never me," although I'm
planning on giving the 30-35-40 wpm W1AW qualifying runs
a shot this month.

Hey, it's easy! You just pass a law that says it's illegal to look
inside. Then noone will ever do it, right? Hey, want to buy a bridge?

466. RE: REC RADIO DATABASE

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-10 00:00:00 UTC
From: Andrew <andrew@tropicom.net>
Message-ID: <343E53F2.BC0EF6D3@tropicom.net>
Source record: 189019
Cross-posted to: rec.radio.swap,rec.radio.shortwave,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

I have often wondered how most people can be so trusting when dealing with perfect strangers on the internet. I myself am a cautious person by nature. I have been screwed by stores, mailorder houses etc. So far I have had very good luck selling some of my ham stuff on Rec.Radio.xxx Newsgroups. I realize there are more good people trading here than bad ones, so don't take this in a negative mannor. I was wondering how many people would be interested in my idea.

I was thinking about creating a Web Page just for us Ham Rec Radio swappers that would benefit Ham/Rec Radio Swappers. Here is my plan.

To have a very short and concise either FTP or WWW site that would list a persons name, trade, date, and references (past dealings with) and a short summary of whatever anyone who delt with that person would like to say about his or her trade (short and to the point). All information would be voluntary and all information would be posted as to who said what. This in a very short time would become a database of people you could look up and check out before dealing with them. You could even e-mail their references to verify them.

Here is a possible sample:

John Doe jdoe@anywhere.com XD4111 Last Updated 07/14/97

Jane Doe,radio1@pc.net.uk,XD5333 - I sent $500 for a Yaesu FT-8500 and it was everything he said it would be, it was sent out on time and I am happy. 7/97

Sam Muttle,smuttle@y.com,XD5555 - I sent $45 for an Icom W2A that was supposed to be in 100% working condition when I received it it didn't work, he worked with me to get it right and now everything is OK. He's a good man and I would deal with him again. 7/97

Jane Doe radio1@pc.net.uk XD5333 Last Updated 10/10/97

Paul Had,phad@gg.com,XD4442 - I sent her a check for $200 for a Yaesu FT-50 that needed some work, after sending many e-mails, regular mail and telephone calls, I still have not received my stuff! I would never deal with her again. 8/97

Harry Whit,hwhit@yup.com - I sent her a US Postal Money order for $550 for a Yaesu 757 that was supposed to be brand new in the box with all paperwork. What I received was a 757 that had many scratches on it and

an old really beat box with a torn manual. The radio also did not function properly. She refused to return my money and I would never deal with her again. 9/97

All of the above info of course is made up, but this should give you an idea on how my mind sees it. I think that all of us could really benefit from a database like this. It would be up to all the posters to send me mail in a specified format (I would have a submit form to fill out) and I would put this into the database at least every other day. I have no idea how many people would contribute to this, nor how much the expenses would be on my behalf, but I would be willing to donate my time for free and people could send in donations to pay for the Web Costs involved. There would of course not be a mandatory charge for the service. I have no plans to offer this to any other news groups. This is just to benifit us hams, and Scanner traders or anyone else who uses the Rec.Radio.xxxx groups. No Commercial business or reference would be allowed, no slander, no bad carma, and no abusive language, whatever is posted whether it be positive or negative will be the responsiblity of the posting author who sent it to me.

I would like any input on this idea that you have. Please post all response to the "REC.RADIO.SWAP" newsgroup so we can all get involved Put in Subject to your post; "RE: REC RADIO DATABASE". If you have any private ideas you can email me directly.

This site has not been formed yet and based upon your response, is whether it even will.

Good luck to all on your swaps.

Andrew

474. Re: Ham radio demographics in the USA

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-10 00:00:00 UTC
From: jason_hsu@nospam.bigfoot.com
Message-ID: <61litl$sah@drn.zippo.com>
Source record: 189027

A few clarifications:

1. I never said that racism or sexism kept anyone out of ham radio; anyone who can pass the necessary exams (which are of the "objective" type) becomes licensed. In fact, ham radio has the potential to fight prejudice through remote communications and friendship. This would be an indirect public service and promote our hobby (necessary for protection from spectrum invasion).
I believe that if we can bring down the myths of ham radio (too expensive, too time-consuming, too nerdy, I won't fit in, etc.), we can attract a much larger and more diverse group of new hams.
2. I never said that licensing requirements should be changed for any particular demographic group. After all, the radio waves and the equipment do not care about your gender, ethnicity, or creed. Whether or not the current licensing requirements are appropriate is the subject of an extremely controversial issue that I won't delve into here.
3. I never said that any particular FCC or ARRL action is needed to make ham radio more diverse. A more diverse pool of hams requires action from individual hams and clubs.

In rec.radio.amateur.equipment Andrew <andrew@tropicom.net> wrote:
: I have often wondered how most people can be so trusting when dealing
: with perfect strangers on the internet.

Only the unwise are trusting. There are as many crooks on internet as anywhere else (including stores).

The wise shopper can lower the odds on a deal especially a ham deal. The call sign address better match the home address of the seller and buyer.

The phone number, name and address better match the above.

Work phone number can be verified.

I can go on and on. If you are an easy chump you will be taken advantage of so better stay in your basement and hide (baw haw haw). If your a tough cookie you are less likley to be a mark. If it does not smell good - try another fish.

I have bought and sold on internet and NEVER had a problem.
Request a scanned image. Ask very specific questions about damage, wear etc.

Its no differnet with new equipment. The add only tells the good news. You really have to use internet newsgroups to check the true good and bad points. I point out that prior to these news groups we only had magazine reviews which were very easy on the manufacters. Rarely critical even with a glaring problem. So thanks to Internet we can get much more info and questions answered form actual users.

I make sure I know who I am dealing with as outlined above.

>The downconverter would seem to byppass the legality of using a scanner
>on those frequencies.

Actually it doesn't bypass the law. The law (ECPA) prohibits lstening
to cellular (and more recently ordless) regardless of the actual
equipment that might be used. Even using an old UHF TV to
listen is a violation. The violation is the act of
listening, not the equipment. There are other FCC
regulations which do prohibit the manufacture and or
importation of cell capable scanners.

[snip]

>That is the point! If you don't encrypt, then expect no privacy.

I don't think this is good enough. Don't expect privacy if you are talking over airwaves. Certain encryption may or may not be crackable, but it still goes over the airwaves to lots of people.

>If I tell you I have a scanner capable of cell phone (or cordless)
>reception, what can you do to stop me from listening?

Nothing, unless you are dumb enough to tell him where you live and if you admit to listening to Federally controlled frequencies. A phone call to the FCC would probably ruin your day.

>
>If I tell you I have a scanner capable of cell phone (or cordless)
>reception, and I use it to listen to your cell phone conversations,
>how would you know and then PROVE I did so?

By your own admission in writing, duh.

>
>If I tell you I have a scanner capable of cell phone (or cordless)
>reception, and I use it to listen to anyone's cell phone
>conversations, how would the FCC know and then PROVE I did so?

Again....by your own admission.

If you don't think so, why don't you put it to the test for us. You seem pretty confident that nothing will happen. So...test it for us will ya? Tell us where you are, tell us that you are listening to cellular right now and see what happens after someone places a call to the FCC or your local police.

Since when is it impossible to be guilty until proven innocent? Seems to me that you'll be the one PROVING you weren't listening to anything illegal.

Don't get me wrong, I listen to this stuff too whenever I feel like it. BUT, I'm not about to tell you anything about me that you don't need to know. I'm not going to jail for something stupid like that. I don't have the time or money to fight something like this. If you do, I think that's great.

Hello announcing the new 10 10 Chapter the flyingtigers
this chapter is from the state of Rhode Island
First special starting Nov 1, 1997
all specials are military and of planes nature.
the specials are extreamly interesting and exciting working for seals
and points.
The beautiful certificate is 8X10 color glossy P-40 Warhawk
with your name flying tiger number and 10 10 info (sign up now for a
low low number.
the cost of the member ship is a one time $3.00 fee paid to
the chapter head KA1JFT Jerry or cash
I am the certificate manager Frank Grzych KE1FJ contact myself thru
email flyingtigers1010@juno.com or cobra@ibm.net
Our first Net will be on Sunday October 19,1997 1:15 est
all checkins welcomed

Are you kidding me? You're right, its racism. Because people choose not to be in a COMPLETELY VOLUNTARY group of people, they are being descriminated against. I am so damn tired of you race-hustling poverty pimps injecting race into every situation. Maybe there are fewer minorities involved in HAM radio because fewer minorities want to be involved. Maybe it doesn't interest them. Minorities get that name because they are in the MINORITY. If they had bigger numbers, we would see more of them in the HAM ranks. HAM is such a small sampling of the population, it is unrealistic to expect a normal racial distribution. As far as women are concerned, who knows? Maybe it is because HAM radio is an excuse to have cool (sometimes expensive) toys. This is, you will admit, primarily a guy thing.
Conspiricies are not everywhere. Everyone is not out to get minorities. Get over your bad self and get on the radio.

>From what I can tell, they are not all over the age of 43.

The current average age of all US amateurs (as of the last data released by the FCC with date of birth included) is 52. And it has only dropped that low because the average age for Tech is 43. Before no-code, the average age of all amateurs was 59. The average age of Generals today is 62. If amateur lifespans are typical of the population at large, half of our current Generals will be silent keys within 12 years. Who will replace them? Techs aren't code testing at a rate sufficient to replace them.

We're facing a demographic crisis for HF licensed amateurs. Already their numbers are declining sharply as a percentage of all amateurs, and soon, if something doesn't change, they will be declining rapidly in absolute numbers too. We're no longer talking about the greying of amateur radio. It is already grey. What we're talking about now is an absolute decline of serious proportions in the HF amateur population within the next decade.

Well, that's not really true. There are several different hypothesis
testing mechanisms that you can use.

However, as a general rule of thumb, barring any other factors which
would have to regressed out, one could normally expect to see the
racial distribution of ham radio closely equal that of racial
distributions in the population as a whole.

For instance, one could say that traditionally ham radio is a hobby
for affluent people, given the cost of radio gear. Since statistically
certain racial groups have been in lower socioeconomic groups than
whites, for instance, you might be able to make a case for this
being true in ham radio as well.

Despite a sharp initial thrust of codeless techs, its my understanding
that they have pretty much leveled off to a consistent rate. I tend to
doubt that the rate of new codeless techs is going to keep pace with the
number of HF-licensed hams dying off in the next 20 years. Plus, by then,
codeless techs will start dying off (remember, their average age is just
10 years younger, so at 42 now means 62 in 20 years.)

The biggest problem I have with unenforcable laws, like the silly scanner laws, is that I have a feeling that someday someone may actually try to enforce them.

Why does the congresscritter receive protection from prosecution because
it was played on the floor? If he blows someone away on the floor is
he protected from 1st degree murder charges?

The congresscritter also gave a copy to a newspaper. That certainly
shouldn't be a "protected" action.

>I wonder ... has that couple been prosecuted under the federal statues
>yet? They certainly should be to the maximum extent of the law to set

Anything spoken or read from the floor of congress is protected
speech. Killing someone on the floor of congress isn't
protected...unless
maybe some liberal lawyer tries to equate it with an act
of speech :-)

HP8732B, Pin Diode Attenuator, 1.8 to 4.5 GHz, $40.00 each
HP8733B, Pin Diode Attenuator, 3.7 to 8.3 GHz, $40.00 each
HP8734A, Pin Diode Attenuator, 7.0 to 12.4 GHz, $40.00 each
HP8734B, Pin Diode Attenuator, 7.0 to 12.4 GHz, $40.00 each
HP11517A, Mixer, 12.4 to 40 GHz, $100.00 each
HP X375A, Variable Attenuator, X Band, 0 to 20 dB, $40.00 each
HP X752A, 3 dB Directional Coupler, X Band, $12.50 each

Free Shipping in the USA & Canada on all of the above, on orders of
$25.00 or over. Orders under $25.00 add $4.00 for shipping & handling.
All prices are in US $, Canadian dollar checks should be written at 137%
of the US $ amount ( conversion rate .73 ). No minimum order.
Sale prices valid until 10-20-97 or while supply lasts.

I'm posting this for my friends at Alpha...
please respond directly to them:

SAVE! ** ALPHA "SUNSPOT" SALE! ** SAVE!

Long after sunset Saturday night, I switched on
the xcvr & ALPHA. Before you could say " porpagation",
two 9n1's, an AP2, and a string of Siberians were
in the log. Signal reports ran to S9+20 just like
old times. Sunspots are back!

Dave AA0RS/G3SZA, Brad K0HM, and I all love DXing,
so ALPHA/POWER is throwing a SUNSPOT SALE to celebrate
long nights with 20 wide open to everywhere all night!

CALL NOW and buy a brand new ALPHA 87A for $5,995, an
'89 for $3,795, or a '91B for $2,695. Standard warranty
and 30 day money-back guarantee, of course. Quantities
are limited, so call Dave, Brad, Barbara, or Scott and
mention that you saw this promotion to save on your new
ALPHA. Sale ends 12/19/97 in any case.

Dick Ehrhorn, W0ID

The ARRL Letter
Vol. 16, No. 40
October 10, 1997

Address Changes: Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial: Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

IN THIS EDITION:

* ARRL Audio News to debut
* KC5VPF on the air from Mir
* Sputnik 1 model launch delayed
* State Department applies for CEPT participation
* FCC update on special events
* FCC upholds decision to deny KV4FZ renewal
* Mayors praise ham radio
* Georgia hams create public awareness
* Solar update
* IN BRIEF: This weekend on the radio;
VHF EME Report awards Single-Yagi
Challenge trophies; Azden, not Alinco;
NASA assigns hams in key positions;
APRS donation; SSTV for Sputnik
anniversary; RS-12 in Mode A;
DOVE-17 back on 2 meters; Pre-teen
ham among volunteers during flooding;
70 MHz spectrum assigned to SARL

ARRL AUDIO NEWS DEBUTS OCTOBER 17

The League will inaugurate ARRL Audio News, a weekly, Web-based audio news service, on October 17. Compiled from The ARRL Letter, ARRL Audio News will include the week's top news from the world of Amateur Radio and the League. ARRL Audio News will be available in RealAudio format via the ARRLWeb, http://www.arrl.org/. Tucson Amateur Packet Radio--TAPR--has generously agreed to provide space on its Web server to permit the League to offer this service.

Senior Assistant Technical Editor Rick Lindquist, N1RL, who compiles and edits The ARRL Letter will be the regular on-air voice for ARRL Audio News. The service will be available free to anyone and may be retransmitted in whole or in part for bulletin purposes provided ARRL Audio News is credited as the source.

Each edition of ARRL Audio News will contain up to 10 minutes of timely Amateur Radio news. It will be available via the ARRLWeb every Friday by 9 PM Eastern Time. Dial-up telephone access to ARRL Audio News will be announced later.

For more information, contact Rick Lindquist, N1RL, e-mail n1rl@arrl.org; tel 860-594-0222.

KC5VPF ACTIVE ON PACKET FROM MIR

Dave Wolf, KC5VPF, now aboard the Russian Mir space station for a four-month stay, has tried his hand at the R0MIR packet system. Wolf posted a message to Francisco Costa, CT1EAT, on October 5. Wolf's message said, "New at ham, but will give it a try. Dave."

His predecessor aboard Mir, Mike Foale, KB5UAC, returned to Earth early this week. While both men were aboard Mir, Foale gave Wolf a quick course in how to use the personal message system (PMS) on Mir. Wolf has little experience as a ham.

On Monday, the Mir crew encountered yet another in a series of glitches that have plagued the space station in recent months when it was unable to undock a Progress rocket. The undocking was required so that Mir could dock a new cargo ship. The crew figured out the problem--an unremoved locking device--and undocked the rocket Tuesday. The incident delayed by one day the docking of the incoming supply rocket. Cargo aboard the new Progress included fuel, oxygen, water and scientific equipment.

SPUTNIK MODEL LAUNCH DELAYED

It now appears that the launch of a working model Sputnik 1 from the Russian Mir space station won't happen until October 18-20, and perhaps later. According to AMSAT News Service, the model Sputnik, assembled by students in Russia and equipped with a 2-meter transmitter by students in France, was to be aboard the Progress rocket that docked aboard Mir earlier this week. Earlier information from several sources--including the sponsors--had indicated the model satellite would be launched from Mir October 4, the 40th anniversary of the original Sputnik 1 satellite.

The Sputnik-40, as it's called, reportedly will be hand-released by the Mir crew during a space walk. Latest information indicates the mini-satellite will transmit a "beep-beep" signal on 145.800 MHz (FM) from its 200-mW onboard transmitter. The batteries are expected to last a month or two.

For additional details--and photos--see http://www.oceanes.fr/~fr5fc/spoutnik.html.--thanks to AMSAT News Service and Keith Baker, KB1SF

STATE DEPARTMENT APPLIES FOR US CEPT PARTICIPATION

The State Department has applied for US participation in the European Conference of Postal and Telecommunications Administrations (CEPT) Amateur Radio licensing system. The move, September 22, could eventually make it easier for US hams to operate temporarily in European countries that participate in CEPT. Holders of a CEPT license could operate in

CEPT-participating countries without having to apply for a reciprocal license.

"No doubt there will be some give and take between the European Radiocommunications Office (ERO) and the Department of State over the details before the US is accepted as a participant, but an important milestone has been reached," said ARRL Executive Vice President David Sumner, K1ZZ. The application consists of a four-page letter with voluminous attachments. Last year, the FCC had asked the State Department to apply for participation in the CEPT Agreement as a non-CEPT country.

The action follows in the wake of an earlier suggestion by the ARRL to the FCC that the US take advantage of the CEPT Recommendation T/R 61-01 arrangements and issue a CEPT license that would be recognized by other participating administrations and valid for visits.

Last fall, the FCC proposed amending the Amateur Radio rules to make it easier for hams holding a CEPT license or an International Amateur Radio Permit (IARP) to operate during short visits to the US.

FCC UPDATES SPECIAL EVENT "FACT SHEET"

The FCC has revised Fact Sheet 206E, which deals with the Amateur Special Event Call Sign System and has added the W4VEC VEC of High Point, North Carolina, to the list of approved Special Event Call Sign Coordinators. Here's the revised FCC Fact Sheet:

When transmitting in conjunction with an event of special significance, an amateur station "special event station" may transmit the identification announcement using a special event call sign in accordance with the procedures detailed below. Substituting a special event call sign for its assigned call sign may help a special event station call attention on-air to its participation in the special event and to the unique opportunity for the amateur service community to exchange greetings with the station. Use of these provisions, however, must not detract from the station making the source of its transmissions known to those receiving them. The special event station must also transmit its assigned call sign at least once per hour during such operation [emphasis added].

Special event call signs. A block of 750 call signs is available for use in the special event call sign system. The format of each call sign (1x1) consists of a single letter prefix K, N or W, followed by a single digit numeral 0 through 9, followed by a single letter A through W or Y or Z (X is not available to amateur stations). The station license grantee must obtain coordination for the use of a special event call sign through one of the following special event call sign coordinators. These coordinators maintain and disseminate worldwide a common database for the day-to-day usage of the one-by-one format call signs (for example K1A). Upon completing the coordination process, the special event station may substitute the 1x1 format call sign for its assigned call sign during the period of the special event.

Coordinators: These volunteer entities have been certified as special event call sign coordinators.

* ARRL/VEC, 225 Main St, Newington, CT 06111-1494; tel 860-594-0300, fax 860-594-0339, e-mail vec@arrl.org.

* The W5YI Group Inc, 2000 E Randol Mill Rd, Suite 608-A, Arlington, TX 76011, tel 817-461-6443, fax 817-548-9594, e-mail fmaia@internetMCI.com.

* Western Carolina Amateur Radio Society/VEC Inc, 5833 Clinton Hwy, Suite 203, Knoxville, TN 37912-2500; tel 423-688-7771, e-mail WCARS@KORRnet.org.

* Laurel Amateur Radio Club Inc, Box 3039, Laurel, MD 20709-3039, tel 301-317-7819, e-mail rbusch@erols.com.

* W4VEC/VEC, 3504 Stonehurst Pl, High Point, NC 27265, tel 919-841-7576, e-mail W4VEC@aol.com.

Indicators: In addition to the special event call sign system, any amateur station, including a special event station, may include with its assigned call sign one or more indicators (example W1AW/national convention). Each indicator must be separated from the assigned call sign by a slant (/) or by any suitable word that denotes the slant mark ("portable," "stroke," etc.). If the indicator is self-assigned, it may be included before, after, or both before and after, the assigned call sign (example KP2/W1AW/contest). No self-assigned indicator may conflict with any other indicator specified by the FCC Rules (such as AA, AG, AE or KT) or with any prefix assigned to another country (such as DL, F, G or VE) [emphasis added].

Questions concerning 1x1 call signs and the common database should be directed to the special event call sign coordinators. For information concerning Fact Sheet 206E, contact John B. Johnston, e-mail jjohnsto@fcc.gov; tel 202-418-0680.--FCC

KV4FZ RENEWAL APPEAL DENIED

The FCC has upheld the decision of an administrative law judge to not renew the operator and station licenses of Herbert L. Schoenbohm, KV4FZ, of Kingshill, Virgin Islands. Early last year, FCC Administrative Law Judge Edward Luton determined the Commission should not renew Schoenbohm's ham ticket, but Schoenbohm requested a review. The FCC denied Schoenbohm's application to review Luton's decision on September 30.

In late 1992, Schoenbohm, now 57, was found guilty in US District Court of using a "counterfeit access device" to make long-distance telephone calls. While his initial conviction did not specifically involve breaking FCC regulations, Schoenbohm eventually ran directly afoul of the Commission, which said his conviction "is relevant to evaluating the likelihood that he will comply" with the FCC's Amateur Radio rules.

In early 1994, the FCC designated his application to renew his ham radio license for a hearing, but extended the expiration date of the license until the matter could be settled. A hearing was held in August 1995.

Luton had concluded last January that Schoenbohm's 1992 felony conviction plus his subsequent "knowing violation" of the FCC's ex parte rules "provides further evidence that the Commission will not be able to rely on him to be truthful or to comply" with FCC rules and policies. Schoenbohm was accused of improperly encouraging other people to intervene on his behalf with the FCC and of using ham radio to do so in at least one instance. The ex parte rules prohibit anyone in Schoenbohm's situation from directly soliciting such political intervention.

FCC documents show that Schoenbohm fraudulently obtained long-distance telephone service by using illicitly obtained telephone access codes. Schoenbohm, then the communications chief for the Virgin Islands Police Department, was sentenced to two months in prison (later suspended) and two years probation and was fined $5000. He lost his job as a result of his conviction.

FCC documents also show KV4FZ had a distinguished record of Amateur Radio public-service and had helped provide emergency communication in several hurricanes. However, the decision's Conclusions of Law found that, at the 1995 hearing, Schoenbohm mischaracterized the facts concerning his conviction in "a conscious effort to influence and mislead the trier of fact" and that his "altered testimony about the facts of his conviction was deliberately false." Luton reached a similar conclusion with regard to Schoenbohm's claims that his on-air efforts to get around the ex parte rules were innocent attempts to explain those rules, contained in Section 1.1210.--FCC

(Schoenbohm has not exhausted his avenues of appeal. He can now apply to the Court of Appeals and may remain on the air pending the outcome of his court appeal. The KV4FZ call sign remains in the FCC database, which lists a July 1996 expiration date.--Ed)

MAYORS ON BOTH COASTS LAUD HAM RADIO

For the second time in his administration, New York City Mayor Rudolph Giuliani recognized Amateur Radio by issuing a proclamation declaring Amateur Radio Awareness Day in the Big Apple. The September 19 ceremony was attended by Howard Price, KA2QPJ, NYC ARES EC for media and public relations/NYC RACES deputy radio officer; Charles Hargrove, N2NOV, Staten Island EC/radio officer; Matt Evans, WA2UKM, Brooklyn AEC; Scott Swanson, N9SAT; John Kiernan, KE2UN; and Jerry Cudmore, K2JRC.

On the West Coast earlier this year, San Francisco Mayor Willie Brown praised a local ham radio emergency organization during a meeting of the City and County of San Francisco Disaster Council in late April.

"I must also tell you that I have been frankly fascinated with that unpaid group of people with those ham radios, the Auxiliary Communications Service," the mayor said. Brown said that the ACS makes available "a wireless system that seldom if ever can be totally disrupted by a disaster" and that "ham radio operators are the heart and the soul and the life blood of that system."--thanks to Barry A Schwartz, N2SHP, The Hudson Loop, and Dave Larton, N6JQJ

GEORGIA HAMS CREATE PUBLIC AWARENESS OF HOBBY

Hams in Stone Mountain, Georgia, took advantage of an Amateur Radio Awareness Day proclamation by Mayor Patricia Wheeler to put the hobby on display. Members of the Alford Memorial Radio Club (W4BOC) set up a station in the gazebo in a city park on September 20. More than 40 people stopped by to sign the visitor log (and enjoy some free refreshments).

Club President Lee Flack, KD4HPD, reports the club gave out ARRL brochures too. "There was a lot of interest and questions about disasters and what hams do to help," Flack said. "I guess the public has been hearing about cell phones and public safety radios being unusable some times."

The club has made Amateur Radio Awareness Day an annual event in Stone Mountain, which is near Atlanta.

SOLAR UPDATE

Solar soothsayer Tad Cook, K7VVV, Seattle, Washington, reports: Solar flux was down this week, an average of 4 points below the previous week. Sunspot numbers were also down, an average of almost 8 points. Average solar flux for the previous 90 days rose another point on Monday to 84, on the same day the solar flux finally dipped below the 90-day average when it hit 83.7. The solar flux was above the average for the previous 90 days for 62 consecutive days, which is a good trend. Cycle 23 is definitely on the rise.

Solar flux is expected to rise again immediately, above 85 by October 12, above 90 a week later, and up around the low to mid-90s around October 23. It may be back to the mid-80s around the end of the month. Look for disturbed geomagnetic conditions with possible high absorption of high latitude signals around October 12, 18, 25, and 28.

When the solar flux is high and A and K indices are low, look for good 10, 12, 15 and 17 meter conditions, especially on north-south paths. Twenty meters is still the best band during daylight and early evening hours. The 30, 40 and 80-meter bands will get better as we move toward winter and nighttime static levels subside.

Sunspot numbers for October 2 through 8 were 26, 27, 26, 26, 24, 35 and 17 with a mean of 25.9. The 10.7-cm flux was 85.9, 85.7, 83.4, 84.4, 83.7, 83.5 and 82.9, with a mean of 84.2, and estimated planetary A indices were 4, 7, 4, 2, 3, 7, and 14, with a mean of 5.9.

IN BRIEF:

* This weekend on the radio: The Pennsylvania QSO Party, the VK/ZL/Oceania Contest, CW, and the FISTS CW Fall Sprint all are on tap this weekend. See October QST, page 107, for details.

* VHF EME Report awards Single-Yagi Challenge trophies: After much discourse, the VHF EME Reports Awards Committee has voted unanimously to award Dave Blaschke, W5UN, and Graham Daubney, F/G8MBI, the VHF EME Report Single-Yagi Challenge trophies. W5UN and F/G8MBI made two-way contact on 144-MHz EME on September 21 using single Yagi antennas on each end of the

circuit. Both stations ran maximum legal power and neither employed ground gain. They made contact on their third scheduled attempt. Details will appear in the next issue of the VHF EME Report.--Jonathon H. Williams, WB6IMC

* Azden, not Alinco: To alleviate some confusion in the Amateur Radio community, the company that recently pulled out of the US ham radio market was Azden, based in New York, not Alinco, which is on the West Coast. Alinco advises us that it's still very much in business.

* NASA assigns hams in key positions: Kenneth D. Cockrell, KB5UAH, has been named to serve as chief of the Astronaut Office. Cockrell replaces Col Robert D. Cabana, KC5HBV, who begins fulltime training as commander on STS-88.--NASA

* APRS donation: The "father of APRS," Bob Bruninga, WB4APR, has donated a copy of the latest Automatic Packet Reporting System software to W1AW.--Joe Carcia, NJ1Q

* SSTV for Sputnik anniversary: SSTV experimenter G6HMS has been transmitting Sputnik 1 pictures via SSTV on FO-20 and FO-29, to celebrate the 40th anniversary of the launch of Sputnik 1. He plans to continue the transmissions until November 3. Format for the transmissions is Martin 1 on 435.880 MHz to 435.870 MHz (USB). The uplink frequency is fixed, so ground stations trying to receive the images will need to compensate for Doppler shift.--SpaceNews

* RS-12 in Mode A: The Russian satellite RS-12 was reported operational in Mode A with distortion on the 10-meter downlink (uplink, 145.91-145.95 MHz CW/SSB, downlink 29.41-29.45 MHz .)--AMSAT News Service.

* DOVE-17 back on 2 meters: Operational software has again been successfully loaded into DOVE (DO-17) by the DOVE command team, and the satellite once more is operational on 2 meters (145.825 MHz AFSK-FM). Jim White, WD0E, started the software load in mid-September and reports that everything seems to be running okay. WD0E says it remains to be seen how long the intermittent watchdog timer in the satellite will allow this software to run. The S-band transmitter is on to facilitate testing of S-band equipment on the ground, particularly for those working toward Phase 3D Mode S capability. Power level on the 2 meter transmitter is about 1 W day and night. Telemetry is currently being sent every 60 seconds, but this could change due to power-management needs.--AMSAT News Service

* Pre-teen ham among volunteers during flooding: Jevon Gegg-Mitchell, KE6YLH, of Chico, California was the youngest person to answer a call for Red Cross volunteers to help with flood relief efforts in California early this year. Jevon, who was 12 at the time, spent 38 hours on the air helping to deliver information between the Red Cross in Chico and emergency shelters in Butte County. His efforts earned him a mention in the Bay Area Red Cross newsletter.--thanks to W. David Shultz, KA6JHS

* 70 MHz spectrum assigned to SARL: The South African Telecommunications Regulatory Authority (SATRA) has assigned the frequency spectrum 70.000 to

70.01875 MHz to the South African Radio League on a secondary basis for the purpose of propagation studies. The SARL is inviting proposals from South African hams interested in establishing beacons on 70 MHz.--Johan le Roux

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

* The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:
*
The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

FCC ADMINISTRATIVE LAW JUDGE REAFFIRMS KV4FZ DECISION

An FCC administrative law judge has reaffirmed his decision to not renew the operator and station licenses of Herbert L. Schoenbohm, KV4FZ, of Kingshill, Virgin Islands. Early last year, FCC Administrative Law Judge Edward Luton determined the Commission should not renew Schoenbohm's ham ticket, but Schoenbohm filed exceptions. The FCC remanded the case back to Luton, who issued a supplemental initial decision September 30 containing additional findings of fact and reaffirming his earlier decision not to renew Schoenbohm*s Amateur Radio license.

Schoenbohm*s attorney has indicated that he plans to file exceptions to the judge*s most recent decision. This appeal will be heard by the full FCC. Thus, Schoenbohm still has an administrative appeal and a judicial appeal (US Circuit Court of Appeals, District of Columbia) available to him. In the meantime, he may continue to operate.

In late 1992, Schoenbohm, now 57, was found guilty in US District Court of using a "counterfeit access device" to make long-distance telephone calls. While his initial conviction did not specifically involve breaking FCC regulations, Schoenbohm eventually ran directly afoul of the Commission, which said his conviction "is relevant to evaluating the likelihood that he will comply" with the FCC's Amateur Radio rules.

In early 1994, the FCC designated his application to renew his ham radio license for a hearing, but extended the expiration date of the license until the matter could be settled. A hearing was held in August 1995.

Luton had concluded last January that Schoenbohm's 1992 felony conviction plus his subsequent "knowing violation" of the FCC's ex parte rules "provides further evidence that the Commission will not be able to rely on him to be truthful or to comply" with FCC rules and policies. Schoenbohm was accused of improperly encouraging other people to intervene on his behalf with the FCC and of using ham radio to do so in at least one instance. The ex parte rules prohibit anyone in Schoenbohm's situation from directly soliciting such political intervention.

FCC documents show that Schoenbohm fraudulently obtained long-distance telephone service by using illicitly obtained telephone access codes. Schoenbohm, then the communications chief for the Virgin Islands Police Department, was sentenced to two months in prison (later suspended) and two

years probation and was fined $5000. He lost his job as a result of his conviction.

FCC documents also show KV4FZ had a distinguished record of Amateur Radio public-service and had helped provide emergency communication in several hurricanes. However, the decision's Conclusions of Law found that, at the 1995 hearing, Schoenbohm mischaracterized the facts concerning his conviction in "a conscious effort to influence and mislead the trier of fact" and that his "altered testimony about the facts of his conviction was deliberately false." Luton reached a similar conclusion with regard to Schoenbohm's claims that his on-air efforts to get around the ex parte rules were innocent attempts to explain those rules, contained in Section 1.1210.--FCC

ARLB060 State Department applies for US CEPT participation

The State Department has applied for US participation in the European Conference of Postal and Telecommunications Administrations (CEPT) Amateur Radio licensing system. The move, September 22, could eventually make it easier for US hams to operate temporarily in European countries that participate in CEPT. Holders of a CEPT license could operate in CEPT-participating countries without having to apply for a reciprocal license.

''No doubt there will be some give and take between the European Radiocommunications Office (ERO) and the Department of State over the details before the US is accepted as a participant, but an important milestone has been reached,'' said ARRL Executive Vice President David Sumner, K1ZZ. The application consists of a four-page letter with voluminous attachments. Last year, the FCC had asked the State Department to apply for participation in the CEPT Agreement as a non-CEPT country.

The action follows in the wake of an earlier suggestion by the ARRL to the FCC that the US take advantage of the CEPT Recommendation T/R 61-01 arrangements and issue a CEPT license that would be recognized by other participating administrations and valid for visits.

Last fall, the FCC proposed amending the Amateur Radio rules to make it easier for hams holding a CEPT license or an International Amateur Radio Permit (IARP) to operate during short visits to the US.

ARLP041 Propagation de K7VVV

ZCZC AP41
QST de W1AW
Propagation Forecast Bulletin 41 ARLP041
From Tad Cook, K7VVV
Seattle, WA October 10, 1997
To all radio amateurs

SB PROP ARL ARLP041
ARLP041 Propagation de K7VVV

Solar flux was down this week, an average of four points below the previous week. Sunspot numbers were also down, an average of almost 8 points. Average solar flux for the previous ninety days rose another point on October 6 to 84, on the same day the solar flux finally dipped below the 90 day average when it hit 83.7. The solar flux was above the average for the previous ninety days for 62 consecutive days, which is a good trend. Cycle 23 is definitely on the rise.

Solar flux is expected to rise again immediately, above 85 by October 12, above 90 a week later, and up around the low to mid-nineties around October 23. It may be back to the mid-eighties around the end of the month. Look for disturbed geomagnetic conditions with possible high absorption of high latitude signals around October 12, 18, 25, and 28.

When the solar flux is high and A and K indices are low, look for good 10, 12, 15 and 17 meter conditions, especially on north-south paths. 20 meters is still the best band during daylight and early evening hours. 30, 40 and 80 meters will get better as we move toward winter and nighttime static levels subside.

Sunspot Numbers for October 2 through 8 were 26, 27, 26, 26, 24, 35 and 17 with a mean of 25.9. 10.7 cm flux was 85.9, 85.7, 83.4, 84.4, 83.7, 83.5 and 82.9, with a mean of 84.2, and estimated planetary A indices were 4, 7, 4, 2, 3, 7, and 14, with a mean of 5.9.

Hello Mr Hamster,

With your twisted imagination, I can see where you would prefer to keep your where abouts somewhat secret. Don't want those guys with White Coats coming for you. I read all that Carl writes and have never seen what you below give him credit for.

Maybe you can give me some plausable reason you would resort to imagination when the reality is here for all to see. One reason I suppose would be to re-invent the situation into what you would like to believe rather than take it for the way it really is. In most circles that is known to be a sickness. Seek help Sir.

The cell phones actually preceeded the sophisticated (and
inexpensive) scanners of the 80's to the present. Having said that,
I recall easily listening to ship-to-shore telephone conversations
as a youth in Long Island, NY with just my plain vanilla HF shortwave
receiver. Somewhere around 2.5MHz as I recall.

>Basically, imagine a construction company building houses, but not

Actually it is more along the line of a totaly glass house and then
demanding that no one ever look inside from the street.

There you have it, another glowing example of logic and personal
profesionalism from a pro-code advocate. For the record, yes it
is the law and that is what the nocode test advocates are trying
to change...the law. If anyone sees anything wrong with that
effort (technically, legally or ethically) then I eagerly
await your rational as to why.

Just HOW do you expect such enforcement when any violator
has about zero chance of being detected? That is the issue.
In response to the obvious inability to enforce any "no listening"
law, the government tries to ban basic radio receiving equipment.

> IMO, such people deserve such
>treatment. There would be a LOT less people invading other people's

>privacy if the laws were enforced. The way the FCC is handling amateur
>radio pretty much indicates the enforcement we'll see (unfortunately).

Well, at least you see the futility of enforcement and it is
worth repeating again...
Just HOW do you expect such enforcement when any violator
has about zero chance of being detected? There is NO way for
the FCC to know if anyone is listening to anyone else. If you
think there is, please post as to how you expect the FCC
to do that...even if the FCC had the manpower and budget?

A cellular "phone" is a RADIO. It's frequencies are no different than
the ham bands or the aviation bands. It's interface is very similar to
a telephone, but it's a RADIO. More to the point, I hope you don't
really think this bill is about protecting cell phone users. If you do,
then you won't mind giving up your ham radio or your pilot's license
when they are considered to violate someone elses civil rights. After
all, you can spy on me in my back yard with that Cessna, and you can

plan the demise of our government with your ham buddies. You say that ham radio is on the private airwaves. How do you think a cellular phone works?

>radio that can tune the ham bands. Hams at my ham clubs are in favor
>of this bill's idea (I have not seen the actual bill ... just heard it
>talked about at our club meetings).

The problem with expressing favor for blocking the listening to
private conversations is that if one for example gets on the street,
and yells out things, one can't have an expectation of privacy.

Talking on the radio in a non-encrypted manner is similar to
shouting things out on the radio. Even radios not tuned to the
supposed frequency can overhear let's say phone conversations
on 49 MHz as can people with baby monitors. In fact with a
6 M AM radio, I used to be able to slope detect 49 MHz
phone conversations without tuning to any out of band
frequency.

I view cellular analog conversations as the equivalent of conducting
conversations in a crowded restaurant, you don't know who is
listening, and it's not a good idea to believe that you're really in
private conversation. I also note that even the cheap PCS phones
offer a great deal more encoded digital privacy than cellular phones
do. It would make more sense to make it illegal to DECODE
conversations that have been digitized or otherwise reasonably
encrypted than to make it illegal to listen to things on scanners,
and old television sets. I have yet to listen to a cellular conversation,
even before the 1986 ECPA and subsequent amendments, but
everyone knew that it would be meaningless to make it illegal to
listen except Congress. I also note that the bill as presently
drafted might even bar listening to NWS forecasts in the same
general RF region as a protected transmission.

If I want to have a private electronic mail conversation with you,
I don't post it to a newsgroup even if normally there are only three
people reading it, I instead try to send it directly to your email
address, and I well realize that even then, it's not truly private
unless encrypted. Is listening to analog phone conversations
rude, yes? Is it possible to enforce such laws, the answer truthfully
is NO. Yes, a few people may be caught, and scanner manufacturers
may find it easier to just avoid making wide range scanners, but
there is so much rf surplus available now that can be used as a

front end with a mixer, that the present proposed laws will be flouted
the first day they go into effect by the knowledgeable and possibly
the criminal, although if someone is silly enough to provide really
private details over the air, ...

>down-converter so that you can pick them up on an unmodified scanner.

And home building a down converter is trivial. The component parts
to do so are generic and available off the shelf. The coponent parts
to build a down converter will never be illegal to purchase.

> Not to mention that there are 100's of thousands of pre-rule scanners that
>work just fine, and are totally legal.

And those existing legal scanners can be sold and resold by
anyone as any used equipment can be.

515. CW Program Needed

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-10 00:00:00 UTC
From: kf4bxt@juno.com
Message-ID: <876482084.21566@dejanews.com>
Source record: 189105

I'm looking for a Code Program to generate test QSO's for a high-speed CW Competition. Problem is, the program MUST have the following features.

1) Ability to generate code up to 80 wpm in standard mode, not Farnsworth. 2) Have computer calibration method to verify and calibrate speed. 3) No text file size limit. 4) Ability to use sound card.

I presently have Morse Tutor Gold which is a very good program and we've used it in classes to teach code. It has all the above features except it has a 2000 byte limit on user-created text files. I can generate 1 minute copy at speeds up to 60 wpm but when I hit 65 wpm, the program will cut off any text exceeding the 2000 byte limit.

Don't ask WHY we're doing this (I'm just doing the "mechanical" work of producing the tapes) and don't shake your head thinking NO ONE can possibly, realistically copy CW that fast anyway! I've thought the same thing, but I've heard the "world record" is more than 75 wpm.

Can anyone help?

Thanks and 73s,
Keith, KF4BXT

I suggest that you read the bill and not make judgements without
reading it. I should preface this with the fact that HR2369 is being
"reworked" as the author admits that it was "flawed", but the bill
would have changed the 1934 Commuications Act to read "intercept and
divulge" to "intercept or divulge". It would be illegal to listen to
anything as a third party that was not exempted. The exemptions are
public radio and TV, ham, CB, and unencrypted TVRO. As such,
listening to the aviation bands would indeed be illegal.
I am in favor of the cellular telephone industry either going
digital encrypted or informing people that they are,in effect, talking
on a radio and their conversations are capable of being intercepted.

I assume that you are aware that since the law was written regarding the blocking of celluar frequencies in scanners that the cell band was enlarged? If not, this means that scanners block a certain band of frequencies, newer phones use these frequencies and more. This means a fully blocked scanner (i.e. one that can't have the blocked cell frequencies restored) can still receive cell frequencies! Besides, a simple down converter (a 400 MHz mixer and band pass filters) can shift the 800 - 915 MHz frequencies down to 400 - 515 MHz which most scanners can receive. The shifter can be built for about $40 and there are no blocks. The shifter works on the same theory as the down conversion found in LNBs. As a matter of fact, you can use a "simple" tv (one without all the mute, fine tune, quartz lock tuner) to tune in cell calls. These are found on the channels 69-83.

Have Fun

518. FT-767 info/opinions?

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-10 00:00:00 UTC
From: sbabb@lpub.NoQRM.com
Message-ID: <61l7rc$qbl@news-central.tiac.net>
Source record: 189108
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.dx,rec.radio.amateur.space

I'm looking for a "new" HF radio.

My Icom 730 has served well, but I'm looking for something that will cover 160 meters and give me more sensitivity and better filtering (particularly on SSB.) I like dxing, ragchewing, rtty/amtor/packet, and contesting. I live down the road from KC1XX, so I don't even see myself as a "little pistol" in contests (maybe more of a "rusty slingshot") but I enjoy seeing what I can do with my R5, doublet, and 100 watts.

I saw a Yaesu FT-767 GX II at the Rochester, NH hamfest last weekend. I didn't get much of a chance to look at it because someone bought it (for $1400 or so, I think) within minutes of me starting to look at it. It had modules for 6M, 2M, and 70cm. This interested me because I'd like to take a shot at the satellites, and it would also let me operate 6M dx and maybe a few of the local repeaters.

Since then, I've poked around dejanews and the web looking for info on this radio. As often happens, I found more questions than answers. So I've brought my questions to you:

1. What is the difference between a FT-767, a FT-767 GX, and a FT-767 GX II?

2. How are the filters in this rig? As 20 meters gets uglier, better filters seem to be what I need the most (followed by more receiver sensitivity.)

3. You can contest with any radio, but some are better than others. Do any contesters have comments on this rig?

4. Anyone want to comment on their experiences with the VHF/UHF modules and satellite work?

5. Are there other rigs that are as versatile as this one appears to be?

Thanks and 73,
Scott WA1VHT

j wrote:
>
> morse proficiency. That need just does not exist today.

Of course it does! Tune around especially with the sunspots coming up
and
realize that nearly half of the QSO's in the HF ham bands are using
Morse.
The other predominant modes on HF are attainable by just talking. Morse
requires some special skill and training. What does QRL? C mean to
you? Fire up the
old rock crusher and tune up here?

> Why bar many bright minds from this hobby only because they could care less
> about learning to send and receive information in a quaint, dated, and nearly
> dead mode?

Please realize that the only segment of the Ham bands that require Morse
testing
is the small sliver between 1.8 and 27 MHz. All those bright young
minds have
megahertz upon megahertz available without the Morse requirement. So
what is
holding them back?

Here is a summary of news items covered on edition #237 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 17-Oct:
-
1. US State Department Asks to Join CEPT Agreement
2. Launch of Sputnik-40 from Mir Delayed, Model of Original
3. G6HMS to Run SSTV on Fujisats to Celebrate Sputnik Anniversary
4. FCC Issues Revised Fact Sheet for Special Event Station Calls
5. Dave Wolf, KC5VPF, Gets Feet Wet on Packet from R0MIR
6. Two Hams Reassigned by NASA, One to Command STS-88
7. DOVE-OSCAR-17 Back on 2 Meters Running AFSK
8. A New Competitor: ARRL to Start Web-based Audio News Service
9. Special Event Station Calendar
10. N5JGK Plans /MM Operation on AO-27 from Rare Grids
11. IBM Announces New Chip Process Using Copper, Not Aluminum
12. PC Stamp to Beta Test Soon, Pending US Postal Service Approval
13. Netscape CEO Says Equipment Giveaways Will Begin Soon
14. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
15. Weekly Propagation Forecast
16. "The RAIN Dial-up" from Chicago
17. TWIAR Internet Audio to Move to New Web Site Soon
-
Funding for the program's transmission and production expense was
provided this week by a grant from users of the N9SBH repeater
system, serving Goshen, Warsaw, Plymouth, and North Webster,
Indiana, on 224.16 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
```

through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA. A separate "RealAudio" file is also available at this site. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

So you're cruising down around 7040 KHz and hear "QRL? C" at
13 WPM or on down around 7005 KHz and here "QRM PSE QSY" at
20 WPM. Does that mean to fire up the old rock crusher and
tune up here? Wake up and smell the Morse "UNK". It's a
matter of practicality. How much chaos and interference
(world wide, now with the sunspots coming up) are you
willing to generate in that little sliver of HF allocations
for the no-code cause?

Something that few people have noted, because they are all stuck in their own little agenda, is that there has been an incremental, "tiny piece at at time" restrictions on more and more.
It used to be that actually blowing something up was illegal, now if you know someone that read a book about someone blowing things up, you are under suspicion.

Actually, if someone can't repair a crystal set, WITHOUT A SCHEMATIC or
a manual, they really don't deserve to be an electronic's technician
since they don't understand the first thing about electronics.

I don't see a parallel between code, and your analogy whatsoever. I
can see your arguement that lack of code knowledge doesn't mean a
person doesn't know how to communicate, but if a person can't
figure out a crystal set, I wouldn't even want that person repairing
the battery connector on my RS five transistor Flavor Radio. (Although
I might consider allowing them to replace the battery.)

I don't have to. Your response and your plea speaks volumes
about your position on the code issue and courteous HF operating
in general. Maybe you can get Carl or Coffman to explain it
to you.

Too bad you don't "read" CW; you would find none of that sort
of goings on. Anyway, we who are in CW believe it to be the
real spirit of amateur radio! Has been for a long time; do not
believe it will soon disappear. May not be a requirement for long,
but will not go away. Clearly, you have not been on a crowded
band, and trying to figure out what is going on during an SSB
encounter. A great deal more easy using CW; but that is just
the opium of those of us who are COMPETENT with CW.

No; no divisions. The service is fragmented enough.
I'm curious why I hear slow code in the xtra cw segment, and fast code in the Novice segments. Since it "seems" to be working now, why have these arbitrary divisions? Gosh, a novice having a QSO with an xtra anywhere in the cw subband. Beats waiting for the higher class licensees to afford some cw practice on the unwashed.
Wouldn't it be nice just to be "a Ham," rather than this kind of ham or that kind of ham?

Soon to be heard on the backstreets and dim alleyways all
across the country.
The Black Market of Scanner Service Manuals is born.
Who will be first up to bat offering cheaply photocopied
repos of the "real thing?"

Interestingly enough, You can still get one if you were lucky
enough to buy a scanner without the 800Mhz band.
The manuals for my pro 41 and pro 2020 did not come up
"restricted".

K2UNK said:

> While many of us have agreed with the concept of setting aside
> CW only segments.....

I see this concept surface here occasionally, and I always make
a mental note to ask someone to help me try to understand it.
No reason for HF "CW only" segments has yet occured to me.
So this time I'm asking.

Except for the days when we shared MF with Loran, I can't
remember any modern day example of such restrictive regulation.
It seems to me to be counter to the nature of our service to
erect static "fences" which favor a single mode to the exclusion
of all others. Yes, I know we today have "de facto mode
specific reservations", however these are not mandated by
regulation, but rather by "market forces" on the bands, and
tend to be elastic as popularity or usage of different modes
rises and falls.

I think this flexible-use characteristic should be preserved as much
as possible. While some exceptions might be merited for a few
applications (fixed frequencies for HF-auto-forward boxes, for
example), CW is especially adaptive to "fitting into the crannies"
and perhaps the *least* in need of "reserved territory". Beezley's
recent DSP work with coherent "I/Q" CW reception suggests to me
that in fact Morse and many wider-band modes (at least voice) could
comfortably simultaneously exist on the same channel, in the same
skip zone, at the same time. Just "thinking out loud", but the
implementation seems well within existing equipment performance
envelopes, although we might wish to pull the rx DSP further back
into the AGC chain.

So what am I missing? We've lived quite happily *without* such
mode-reservations, and I'd argue that this *mixing* of modes
might well be expanded rather than reduced. This "sharing
laboratory" is unique to our service, and perhaps some lessons
learned could be transplanted to other HF services.

Source record: 188968

Hi Bill, used a W9INN antenna (as an inverted V) for the last 15 years, in three locations. VERY happy with the results. I feed it with coax to the (provided) balun.
My first location was at an old 3 1/2 story house (peak of roof for center of antenna). I called W9INN and tlked to the man himself! He was very helpful, and actually sent me an antenna cut to lengths that were figured by using the actual heights and angles that I would be installing the antenna at in my location. It was very easy to trim that one in<G>

Good antenna, good service, long lasting, etc.

One COULD say that but it would be bullshit. I am NOT even close to being affluent and a good portion of the hams I know aren't either. Who hasn't bought used hamgear? I think we all try to save a little money now and then. You do NOT need to buy NEW gear to get into ham radio and used prices are certainly reasonable. I think interest and ambition play a part in who gets into the hobby. This goes for ANY hobby, not just ham radio. This isn't a flame, just an opinion!

Nobody, except a handful of knee-jerk hams who treat knowledge of Morse like it was a sacrament.

Requiring Morse Code for a ham license is like requiring that an electronics technician be proficient in repairing crystal sets. It's quaint, anachronistic, and useless except to those into nostalgia. Try to force your mind a few decades ahead of its present setting, and welcome to 1997!!

How about a yagi or quad beam antenna? Front to back rejection can be varied somewhat at the expense of forward gain. They are simple to construct and can be purchased commercially also. If you need a wider reception angle, another antenna with less gain, a diplole, or even a 1/4 wave antenna could be used just for reception. The ARRL handbook, as well as the equivalent from RSGB (England) and some otheres, like Bill Orr's VHF/UHF antenna book are good guides for building all of the commonly used types of antennas for VHF/UHF. If you can find "VHF for the Radio Amateur" by Frank C. Jones, W6AJF, published in 1961 by CQ Magazine, there are antennas for frequencies from 50 Mhz to 1296 Mhz. (VHF/UHF distinctions were blurred back then.) I made a 4 bay yagi array with a rather unique fed system I've not seen anywhere else that really put fire in my portable 2M tranceiver. You might not find this in print anymore, but there are plenty of books that can help you decide and design your own solution to your problem.

Its your word against his. There is no proof in that case.

If you tell a federal agent, that would be different.

I think what is most unfortunate in your response is that you truly seem to believe that your communications over radio waves is much more privileged that police, fire, business, GMRS, FRS, CB, etc. You intially claim that you do not expect privacy over the air, but then try to paint scanner listeners as "unethical". For someone who claims not to have an expectation of privacy, your whining smacks of hypocrisy.
Would you expect privacy over a CB channel or a FRS channel? I doubt it. So what really makes cell phones any different, other than the system runs on a sophisticated network and you pay for the service. There is no difference.
In the end, people like yourself will destroy what has been an enjoyable hobby to some, a means of news gathering for the press and an important tool for those of us in public safety, such as myself, who use their scanners to respond to emergencies in our communities. Yes, not every community can afford individual radios for every cop, fireman or EMT.
I find it somewhat ironic that cell phone service has ignited another controversy in my area. So many people want cell phones that the phone company has had to implement additional area codes. As you can well imagine, the increased demand for cellular service has required the cell companies to increase their infrastructure. The problem is nobody wants to let them put up additional towers. Sure, everybody wants the service but nobody wants the baggage that goes along with it. Hypocrites--- they never cease to amaze me!

> amateur radio database to prevent statistical "proof texting"?
> ("Proof texting" being a form of "proving" any given claim on the
> basis of "proof" that exists in textual form (printed or electronic).)

Why would the FCC care at all? Why would they want to hide the
demographic facts from us or the American people in general?

I'm not being critical, just can't see any reason they would want
to hide that information from us ... unless you're suggesting that
they want to hide the fact that ham radio is going to experience
a major die-off/decline without changes in our ways so that they
can reallocate our bands with a smaller population to complain
or resist ...

Perhaps we should petition the FCC to put the information back in
... or request a court order under the FOIA ...

I think being able to track the demographics of our population is critical.
(and not simply because of the vague possibility of the scenario above)

The truly ironic part of this whole flap is that the couple who
actually did the taping may indeed face a trial, and properly so. The
Florida congressman who actually turned the tapes over to the media, and
therefore also violated federal law, may escape punishment. This is the
ultimate example of "do as I say, not as I do" and typical of the
haphazard manner in which our government first crafts and then
administers laws.

Agreed with your first points, and those you made in the other posting
on this topic. I would like to respond to:

>3. I never said that any particular FCC or ARRL
>action is needed to make ham radio more diverse. A more diverse
>pool of hams requires action from individual hams and clubs.
>Jason Hsu, KB9PNZ
Herein lies the rub. Most of the hams in my community probably don't
know anyone of a different ethnic background. Most are over 50,
white and upper middle class. I can safely say that the demographics
of ham radio in these parts reflects the demographics one would find
at a Moose lodge, except these folks are more literate than your
average moose member. You don't find many people of color or those
from different ethnic backgrounds at a Moose or Eagles lodge, do you?
Most of them are white folks from middle america who like beer and
country music.

In fact, around here, even among hams, it's hard to get most of these
old farts to even answer a stranger on the local machine. This
stranger can have a call which is one by two, two by one, or anything,
but if he or she's not known to the locals, you won't hear a qso take
place unless a small minority of us are present. Shortly after the
stranger calls, you might hear one local good ol' boy call another,
but answering the stranger isn't usually going to happen.
Sometimes, after one of us progressive folks breaks the ice with a
newcomer, one of the old boys might find something he says of interest
and pick up a qso with him after we have to sign, but otherwise, the
stranger may as well be talking to themselves, because an answer
they'll not get.
Try asking these folks to get out and recruit---the only recruiting
that's done is by a schoolteacher who gets a bunch of 6th graders to
become barbie hams, with callsigns never heard after they leave his
classroom.

ke4zv says in a recent posting that the average age for general class licensees is around 62 years old. The demographics don't show me a vibrant thriving hobby in 20 years, unless we do something soon.

We do need to modernize some in our testing procedures, but dumbing down isn't the answer, the answer is public awareness. I'd much rather see inner city kids trying to build a better antenna for an hf station so they can get out better with their low budget qrp homebrew rig than I would playing playground basketball and looking for trouble. Ham radio has much to offer these kids, and we need to reach them. How about it, ye old farts, go to a school and talk up your hobby. Invite folks outside your usual circle to attend radio club meetings, find out who we are, and what our hobby's really about.

hmmm... Jason: I don't have an explanation, but I do notice a significant
number of Asian-Americans in the computer field. This is as techy as the
ham radio area, if not more so. Maybe it's OK to be a techie for pay, but
not as a hobby. Go figure!

I also notice that black Americans are underrepresented in ham radio, but
I do see more trying to break into the computer area. Maybe things will
work backward from the way most Euro-american hams were developed. We
started out in ham radio, often as kids, and moved into newer technologies
as they came along. Maybe the "underrepresented minorities" will start in
the high-tech areas, and move to the hobby of amateur radio. Time will
tell.

Better I think would be a 5 wpm for access to ALL HF bands. This would bring us to correlate better with the international treaty. But have some parts of each band reserved for higher speed CW (in the CW sub-bands only).

You need to read the October QST. Despite the Tech no-code license, the rate of growth in ham radio has slowed down worldwide. The "cry-baby no-coders" aren't getting their way so they are leaving ham radio. Good ridence! CW may be an antiquated mode of operation but it's part of the hobby. Just like any other hobby, if you can't do it go find one you can do.

Now we need to read rid of the other cry-babies that are whining because people like me are standing up for their right to privacy. What makes such people think that they can "stomp" on my rights in favor of theirs? Because of such people, I have to spend more money on technology trying to keep them from listening to my PRIVATE conversations rather than them behaving like decent people. I'm not the one that doesn't "get it". I'd rather be a law-abiding citizen that has respect for others right to privacy. The point is, we can't live in anarchy. If that's what some of you want, go find yourself an island. All of you will probably be dead

in less than a month without any laws.

The main reason for "code" still being required, is that under extreme emergency conditions, the extra "punch" per given power and conditions that CW (code) has, could make a difference. It is that, and only that. It has nothing to do with being behind the times, or anything like that. It is just practicality and eficiency in emergencies.

Other famous, or should I say infamous, goverments have had some
success in banning radio equipment. Specifically, the Soviet Union and
Nazi Germany come to mind. Many years ago, in a history class, I recall
reading references to a radio called a "Volksradio" which translates to
the "peoples radio". Essentially, its reception was limited to those
frequencies that the Nazis wanted their people to listen to.
Though some may scoff, I see many parallels between the Nazi regime's
telecommunications policy and current US telecommunications policy.

=====

The writers of "The Drew Carey Show" said it somewhat differently in a
May 28, 1997 rerun:

"A middle-aged guy, living with his parents.
Dust off the old ham radio.
Raise tropical fish.
And be the biggest lose in the world."

QST's editors recently republished a "Dilbert" cartoon that lampooned
the "sexiness" of hams - but they didn't seen to recognize it as a
joke.

Let's face it. The reputation of amateur radio operators for public
service, especially in emergencies, is outstanding.

The public image of hams is something entirely different.

Why?

I am interested in purchasing a used HF xrcvr rig. I m looking
for at least a triple conversion receiver one. All bander of course. I am
willing to spend upwards of $1000. I am currently looking at a Kenwood
940SAT and an Yeasu 757. Are both of these bases and have their own power
supply?? Do these have 6M also. I don't care about digital. Can u recommend
a GREAT H.F. rig base (with internal power supply)? How do the 940 and 757
compare? Any other suggestions? I know that ICOM makes a model 706 (I and
II) that are H.F. xrcvrs with both 6M and 2M, but it is a mobile. Is there
any Base H.F. rigs that cover 160-10M with 6M also (2M is not that
important now as I would like to get a separate 2M base after an H.F.
base). I hear that Kenwood , Icom, Yeasu all make top of the line equipment
but the tech and general support from Kenwood is severely lacking... I am
perfectly willing to purchase an older unit such as an FT101 or something
similar but I don't know what all those older radios do nor any of their
specs. Is their a book that has pictures of all those old radios and newer
ones to with general specs? I would pay lots for a book like this. It may
sound silly to say but aesthetic do mean something to me, to the respect
that I want a one piece base unit not separate speakers, power supplies,
tuners, and separate VFO's, etc.
Please help me if u can thanx!

True for the moment. However, as in everything else that bothers our
Federal officials, once they take a dislike to anything the process
slowly grinds away until that item is outlawed. I can easily envision the
possession of a scanner being outlawed within a few years.

I recommend you read the "Public Service" column in the October issue
of QST. Specifically, on page 93, there is a side bar column entitled "CW
- An Unfortunate Casualty of Technology". I won't belabor the point by
repeating the contents of this article here other than to say that the
article deals with the demise of CW among emergency organizations.
The fact of the matter is that it is much easier to train someone to
operate voice and computerized modes than it is to train someone to
effectively communicate with CW. I agree with your assessment that CW can
get through when other modes will not, but this is generally not a
problem for most emergency organizations who have multiple communications
systems at their disposal.
I don't want anyone to think that I am attacking CW as a mode. On the
contrary, I use CW often for DX'ing. I just want the record set straight
as to the current status of CW for emergency services.

The FCC is probably happy with any morse requirments as far as limiting
things. I think code is really neat and I got alot of pleasure from it.
I can understand resentment for no code from coders, but I have no
reservations for requiring any code today. Do they still require
code??

I'm a little confused, Lee.

Now, anyone will tell you I'm not a no-code tech license-class
supporter, but how exactly is the "cry-baby no-coders" not getting their
way causing a slow-down in the growth of amateur radio, since, by
definition, their licenses (in the US at least) are good for 10 years,
and the license class has only been around a little over 5?

>Now we need to read rid of the other cry-babies that are whining because

>Because of such people, I have to spend more money on technology trying
>to keep them from listening to my PRIVATE conversations rather than them
>behaving like decent people. I'm not the one that doesn't "get it".

Well, it pretty sounds like you don't. In a crowded stadium, you have
no expectation of privacy. So, if you're attempting to yell across the
stadium to a friend, don't expect your conversation to be considered
private. The same analogy holds true with unencrypted wireless
communications. If you want privacy, you have to take reasonable measures
to ensure your communication is private. That means using encryption
technology. If you don't, then there is no reason to expect that other
people -- with scanners, or who just happen to have fillings in their
head that resonate at the frequency you happen to be transmitting --
should hold your conversations "private". Would you use a local
2 meter autopatch to order a new piece of ham gear with your VISA card?
Should other people listening there keep your information "private"?
If not, then why is cell or cordless phone any different?

>I'd rather be a law-abiding citizen that has respect for others right to
>privacy. The point is, we can't live in anarchy. If that's what some of
>you want, go find yourself an island. All of you will probably be dead
>in less than a month without any laws.

The mere presence of rights does not automatically give you the authority
to exercise them. Yes, you may have right X, Y, and Z, but if you've shown

in the past that you are incapable of exercising these rights without hurting others or infringing on the rights of others, then you lose those rights. Cases in point: the right to vote and the right to bear arms -- both taken away from convicted criminals.

You folks are missing the point... The "laws" are only intended
to placate the Cellular industry, so they can inform their customers
that their conversations are "protected" under new Federal laws.
It is a lot cheaper to generate unenforceable laws, than to really
solve the problem by digitial ecryption.

The prior poster raises a valid point -- why were the Florida
couple exempted from prosecution under existing laws? The
answer is simple. Their prosecution and the resulting publicity
would make the generation of new restrictive laws a moot point.
Why have new laws when existing laws can deal with the problem?

What is New Britain?
As to Anapolis, yes, plebes (freshman) apparently still must
learn morse code...but not at any particular
speed apparently (I could live with that for ham radio too).
Odds are, however, that learning the code at Annapolis has more to
do with the overall learning/discipline training than any
actual need.

>How does it explain the return of Morse to the MARS operations?

Morse has not returned to MARS. That was an error
in information that occured about 2 months ago.

>Apparently many still regard Morse CW mode as more than a
>quaint recreational exercise.

You said MANY...how does just Annapolis plebes equate to MANY?

Well a nocode license gets the phone patches and repeaters
now, so they seem to have nothing to do with the issue at all.

>Remember the way people used to try modifications to get their

There are NO such things as off channels. The FCC has no
channel assignments for ham radio. The channels that exist
are by agreement within the ham arena. Infact, hams...all
hams are free to modify their equipment anyway so your
fear already has no justification in reality.

Hello All,
I have a Motorola MT-1000 99 channel hand-held VHF transceiver. Scans 8 channels, emergency switch, light, PL. No charger. Battery (NTN 5447B) and antenna included.

Unit is in good condition. Best reasonable price accepted. Ship UPS COD.

73's

Once again it needs to be pointed out that hams can skip the
questions on packet, RTTY or slowscan TV and still pass the
test because none of these subject areas are tested for on a
separate pass/fail basis as is the case for code.

I would welcome a comprehensive scoring of both the
theory and code to obtain a passing score. Indeed, I have
posted just such a proposal/suggestion before...BUT the
code supporters don't want that because it then becomes possible
to get the license without passing the code by simply scoring
very well on the theory test.

Here's what I suggested over a year ago:
(Note, this was published in the ARRL magazine,
QST in July 1997.

A CW Testing Compromise?

First, is there a middle ground? In the CW testing debate, the
prospect mentioned most is that any change in CW testing must be
accompanied by an increase in difficulty for the theory elements.

Current General and Extra class requirements include passing both the
CW test at 13 wpm (20 wpm for Extra) and a separate theory test. But
what if test takers could take the CW test on a combined scoring basis
with their General or Extra theory test?

How would that be accomplished?
During a VE session, if a test taker failed the CW test, they would be permitted to merge their CW test results from that day's test with their theory results also taken on that day only.

The combined scoring would be done as follows:
The General theory test is 25 questions and one must answer 19 questions correctly to pass. The 13 wpm CW test is 10 questions and one must get 7 answers correct to pass that test element. If we combine the two tests (for a total of 35 questions) and if the test taker scores a total of 26 (19 + 7) answers correctly, then he or she passes, regardless of the individual number of incorrect answers on the CW test. The same concept could be applied for the Extra.

Doing this would retain the same overall test methods (only the scoring process would change) and no additional VE record keeping would be required. The benefit of this option is that if someone does poorly on their CW test, they MUST score higher on the Theory element in order to obtain a passing score. That automatically raises the difficulty level of the theory test for those people that ignore learning CW at those speeds.

In summary, this suggestion meets the concerns of hams because:
1. It retains all existing levels of CW testing,
2. It maintains full compliance with International treaties,
3. It makes no changes to the test elements themselves,
4. It improves the theory difficulty for people that ignored CW,
5. It is an easy to implement process if approved by the FCC and
6. It is a compromise solution.

Note, I would not suggest merging the 5 wpm CW tests unless the international treaty requirement changes..

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST-COMPUTER SHOW -

OCTOBER 26, 1997

LINDENHURST, LI - NY

On October 26, 1997 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the Knights of Columbus Hall located at 400 South Broadway, Lindenhurst, NY. This is an ARRL approved Hamfest.

There will be radio equipment, electronic componets, computers and access-ories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams and information. General admission is $ 6.00. $5.00 with coupon.

For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam seesion. 1996 ARRL/VEC fee is $ 6.25, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

For vendor and additional information pleas contact, Walter Wenzel KA2RGI at (516)957-0218, or Tom Carrubba KA2D at (516)422-9594 during EVENING HOURS ONLY (7PM-10PM). NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the limited space available. Tables are 2.5ft x 6ft.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL and 223.86 OC.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

including
>the sorry excuse for lamp cord sold by Radio Shack.

It's not useless, just poor compared to some other brands.

For short runs on HF, if you are careful putting on the connectors, you
won't really notice any difference in average applications.

For low noise/high power/low leakage/long runs/etc use the better
RG-213 or even 214.

That would hold true for 90% of any of the elements. If I don't use
certain formulas or theory every day I will forget them. What next, I am
pulling out reference material to assist me.

> >Why should I know antenna
> >theory, I will pay someone to do my antenna work.

I don't really agree. I think you are splitting hairs here. You don't
need 100% on the CW test. If you can show 1 minute solid copy you also
pass even if you failed all the questions, correct?

> >Why should I care
> >about different modulations, their abbreviations and such, I only work

Oh, because I question what you have to say I am labeled as a "procode advocate"? That is quite telling.

> Not one of the nocode test advocates
> believe in lowering theory requirments/testing. In fact,
> we'd like to see it made more difficult as already has been
> done by increasing the Novice and Tech question pools
> by 50% as of 7/1/97.

Why would raising the theory requirements (at the entry level) be a good thing? I really don't get it. I don't believe that it will improve the quality of ham radio. What would the point of that be? Increase the failure rate of the entry level test? That doesn't make any sense at all. Do you want to make sure the growth of Ham radio dies out completely?

You really need to explain to me what you mean by "more difficult" and the benefits of doing so are to ham radio. I am getting ready for the advanced. Sheesh! What is the point of me memorizing so many formulas? I will never use them again from memory once the test is over. That is why I have a very small library to support my hobby. If I need it I'll look it up.

In all reality, why so much circuit theory? I doubt you can find many hams that have even seen inside their rigs except the rare peek to close/cut a solder trace or add/remove a diode to open up all freqs or some silly mod that they have no idea how it works.

Must be that far right Republican left leaning Democratic Liberal in me.

601. Yaesu Battery Charger

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-12 00:00:00 UTC
From: Mark Kelley <kelley@idcomm.com>
Message-ID: <34416F20.2C3@idcomm.com>
Source record: 188820

Greetings:

I have a Yaesu NC-42 Quickcharger which I use for my FT-530. I plan on being active on the German 2-Meter/70cm repeaters during my stay in Germany next month and would like to find out if I can use the NC-42 to safely charge my Ni-Cads using 220V.

It says on the charger that it will do so. As I see no switch, I assume that the charger will simply recognize 110v or 220v without any internal modications. Can I buy an adapter and then just simply charge off of 220V? I assume it's that easy. Please let me know if you have experience in this area.

Thanks,

Mark

Wrong, Wrong, Wrong, Curtis.

'Hams' have nothing to do with the licensing requirements. I haven't
'retained' anything. The FCC sets the requirements, not 'hams'.

>All of the nonsense about code being required because of ....

All of this nonsense about code 'being required because' is just speculation,
only the Candy Company knows for sure, and I haven't seen them post
their reasons yet. There is only one REAL reason we have Morse code
testing - because the FCC says so.

>Why this is in a boating and video newsgroups is beyond me. Resetting
>followups as appropriate.

Resetting it to ALT.FLAME sure fixed that problem......

>No Frank, it's up to you to show us where the law prohibits such actions.
>Our codified laws are written in a prohibition-sense ("Thou Shall
>Not..."). What ever is not prohibited, it permitted.

First, check out I believe it is the Fourth Amendment to the
US Constitution. Aside from that, your last statement applies
to citizens, not the government, i.e, a citizen is permitted
to do whatever they please as long as it is not expressly
prohibited by law. The government on the other hand is
only *allowed* to do what it is expressly permitted. Our
founding fathers had the common sense to believe that
people should be allowed whatever freedoms could be
granted so long as they don't infringe upon other's freedoms,
and that the government should stay out of people's
lives as much as possible except where necessary to
ensure the safety and welfare of all.

>I would hope you know our laws better than you have demonstrated above.

Perhaps you should examine your own knowledge before
castigating others. You appear to lack basic knowledge in
constitutional law that most people receive in high school.

Just an armchair lawyer opinion from the Midwest... Worth
every cent you paid for it. ;-)

It's happening right now Bill. With more hams it will get worse. Some people think that they own a particular freq & take it away from someone by kicking on their 1 kilowatt amp. Since the FCC isn't doing their job, this situation will get worse with more hams trying to use the band, any band.

You can start with the 4th Amendment if the equipment is not returned
propmtly after the decision not to press charges has been issued.

You can also argue the 5th Amendment, if the persons property is sold at
auction without a trial, because the person is in effect being held
responsible for a crime in which there was no indictment handed down, no
trial, and no judgment against him. In essence, he is being deprived of
"life, liberty, or PROPERTY, without due process of law".

I read somewhere, that many of those people who spend much time in the basement is that they often times became the next Bill Gates, or Thomas Edison or Alexander Graham Bell or ....

When I was a kid, I had several friends who got out played baseball etc and they are now looking for work.

On the other hand many of those who tinkered with their radios are now owning companies and planning their next technological move.

Looking back of all of my life I found that those people who could focus their thoughts on specific subjects did very well in those areas.

>being true in ham radio as well.

Just like less affluent people can't buy cars, even older ones.

I've tested plenty of people who live in less affluent areas (this
being the DC area, with a wide array of socioeconomic classes).
There's also no requirement for equipment OWNERship, per se.

If there were, few people in Eastern Europe (YO, LZ, SP, Y2,
OK, etc.) for all those years could've been hams. There was this
concept of a "club station," requiring nothing more than proper
authority to operate it.

University and other school clubs are there for the same reason.
When I was in college, I had virtually no equipment, but I had
access to s first-class station that, even though out of school
for seven years, is much more potent than anything I have put
together since then.

>: was broken by the actions of the local constables?

What it really says (the 10th Amendment in the Bill of rights) is that powers not specified in the constitution for the federal government are reserved for the "states" (not lower governments). The state the sherriff is in would need to give the sherriff that authority to make it legal.

Now that I think about it ... the FCC does not have any powers stated in the Constitution. What if a state took the lead (under the authority of the 10th Amendment) to pass a law that said local Sherriffs COULD prosecute CBers who are breaking the law (running over 5 watts power, obscene language, purposeful interference, etc). It would then eventually be upto the Supreme Court to decide. It might be very interesting to watch. But it sure might get people in this country thinking about other ways to get our rights back from the federal government (under the 10th Amendment).

Yeah...the airwaves were cluttered for 2 - 3 years, the novelty wore off,
and things are back to the way they were...so no harm done.

Up here in Canada, 20 years ago, I'd hear all the Bayou folk yelling,
"RIGHT ON, RIGHT ON, RIGHT ON, RIGHT ON..." all day on Ch. 10, thanks to
skip, and illegal transmitters boosting their power. Those guys are gone too.

The funniest was hearing local canadians speak with a southern drawl
while on the CB.

You can use CB in Cypress? I thought that band was US (and a few others)
only...

Allbright's Rule of Thumb for CB
You get a mile (about) for each watt of power.

Since CB is limited (by law ... not by practice) to 5 watts ... expect
about 5 miles.

In southern California you are luck to talk across the street on 5 watts
due to the general level of signal noise and people running above 5
watts.

In Outer Wyoming you will probably do better.

On the ocean you will do the best ... but not if you are close to
southern California 8)

My understanding is that the United States signed a tready at an
International
Telecommunications Union (ITU) meeting many years
ago requiring short wave ham radio operators to demonstrate ability in
morse code.
Thus the FCC can only drop the code requirement on VHF which they did.
Dropping
the code requirement on short wave will require a change in
international law, a much
slower process.

It isn't quite like that. There are two major things that contribute to it. One is that you typically treat all the satellites as an "ensemble" of clocks (which is better than just one clock). The other is that the USNO monitors the GPS clocks compared to their own ensemble (which is probably the best in the world) and supplies correction factors to the USAF who uploads them back to the satellites.
But you should also realize that such results are when doing something like averaging GPS results over some number of hours (such as to discipline your own local frequency standard which might be just a good ovenized quartz).

> channels disappear?

Don't hold your breath waiting for the broadcasters to give back their analog channels, they are already bitching and whining that the timetables are "too fast" and trying to find ways to weasel out ...

Even if the gave the channels back on time, which I doubt they will end up doing, expecting a windfall for amateurs is extremely unrealistic ... we have large blocks of VHF/UHF spectrum now and we're using it EXTREMELY poorly compared to the technical standards of spectral efficiency for commercial services.

Maybe if we could "get our act together" before the giveback, but I doubt it.

> I find it hard to believe that the powers that be would give all that
> new space to the commercial services.

Why? THEY use the spectrum far more efficiently than we do ... THEY are not stuck in the past ... THEY actively seek to adopt new, better things that provide more efficient use of spectrum and more capacity.

Hello Everyone!

So that PBBS operators can facilitate finding other sites to
connect with as well as general AXIP discussion, I've created the AXIP
mailing list on alpha.jpunix.com. The main purpose of this mailoing
list is to list requests for AXIP links with other sites as well as
general AXIP discussions. Got you new PBBS all set up and looking for
other sites to set up links? This is the list to post to! There are two
forms of the mailing list, the regular list and the digest version.
Send email to:

axip-request@alpha.jpunix.com with the body containing:
subscribe axip
for the standard list.

For the digest list send email to:
axip-digest-request@alpha.jpunix.com with the body containing:
subscribe axip-digest
for the digest version.

On what basis do you make this assertion? It seems to fly in the face
of the ARRL's survey of mode usage, as well as observations by many
as related here.

I personally believe that Morse usage is on the decline and will
continue to follow that trend. That does not mean I would ever
advocate a ban on the use of Morse, just that I am willing and
able to face the facts of our world and the major technological
changes that are going on in it.

> The other predominant modes on HF are attainable by just talking. Morse
> requires some special skill and training.

So what? Skill and training in an antiquated mode from the 1840s,
that has been abandoned wholesale by every other radio service in
the world over the course of the past 4-5 decades, is virtually never
used for emergency communications any more, and is far less efficient
and reliable than more modern methods that could be readily available
has virtually NO value beyond the recreational value it's adherents
assign to it, and, therefore, is NOT a compelling reason to make it
a "requirement."

Right ... what is in some respects arguably the "best part" of the ham bands,
where ionospheric propagation allows techniques and operations and

opportunities
for experimentation that are impossible in the higher frequency bands ...
Besides, barring those who "refuse to beep" from the HF bands creates a
totally unwarranted, unjust caste system which has caused nearly irreparable
harm to the amateur service.

> All those bright young
> minds have megahertz upon megahertz available without the Morse
> requirement. So what is holding them back?

Several things ... first a reluctance to have to "kiss ass" (by being forced to
perform an irrelevant hazing ritual that wastes a great deal of time that could
be far better spent) in order to be accepted by those who are often one's
technical inferiors ... this is not egotism or elitism, but rather recognizing
reality, since we are talking about those who are already technically
proficient
far beyond the "Joe six-pack" ham that MD and others seem to view as "the
mainstream of today's hamdom" (and I hate to admit it, but this is possibly
the sole area in which MD and his cronies' opinions may have some validity ...
that in itself, if true, should tell us that ham radio is in BIG trouble.)

Second, pro-coders, in their zeal to "keep the no-coders off of 'our' HF bands"
always fail to recognize that there are many things that could be improved in
the HF bands (better modulation, coding, protocols, and all sorts of new things
that could make the *appearance* of crowding disappear and allow those HF
bands to easily support at least a 5X increase in our population with LESS
interference and congestion than appears to exist today.) However, these
things
CANNOT be "done first" in the VHF/UHF bands because the techniques one
would use there are very different than the techniques that one would use at HF
... because "the channel" (propagation, impairments, etc.) is VERY different
from HF to VHF/UHF ... so the arguments "let them do it (invent improvements
for HF) at VHF/UHF" is inherently bogus.

:Yeah...the airwaves were cluttered for 2 - 3 years, the novelty wore off,
:and things are back to the way they were...so no harm done.

But CB didn't have phone patch and repeaters the way ham does. So
many would use it as a cell phone, the novelty wouldn't wear off
like that.

Remember the way people used to try modifications to get their
own private "off frequency" channels? Think of the problems that
would cause with people interfering with commercial, emergency,
and air communications! A real nightmare.

Managers? Probably not. Management? Before the sound of the
pin drop reaches DFW. They care very much about their image...
to the point of thinking that anything with the name "shack" in
it refers to them... like trying to get "Bianca's Smut Shack" to
cease using the word "shack" in the name of her service.

How does this explain that Morse is still taught at New Britain and
Annapolis?
How does it explain the return of Morse to the MARS operations?
Apparently
many still regard Morse CW mode as more than a quaint recreational
exercise.

Perhaps not for long. It was once legal to walk into any hardware
store and buy a machinegun. And it was once legal to modify
it once you had it, IE shorten the barrel, add a silencer, etc. But
not anymore. It is ironic to note that Maxim not only founded the
ARRL and was a driving force in the beginnings of amateur radio
(and by extension other radio hobbies), he also invented machineguns
and silencers. Two out of three have fallen under the iron hand of
government prohibition (defacto if not total). How long before it is
three out of three?

Another ironic note about silencers. In some countries they are
mandatory rather than prohibited. Quieter ranges make for happier
neighbors. It is a pity the US government doesn't see things that
way. Like finding a place to put up an outside antenna, finding
a place to shoot is becoming harder and harder due to pressures
from neighbors and homeowner associations.

Hmmmmm, well the particular individual whose "progress" I observed was
on misc.activism.militia and I "readily" see a great similarity
between his *ZEALOTRY* and Carl's. Perhaps Carl won't go to the
extremes that this other fellow did but perhaps he will? Anyway
watching Carl's *MANY* *PASSIONATE* postings and constant
cryings/whinings as he attempts to *SAVE* amateur radio does make for
GREAT comic relief and if he does flip out it would only add more
humor ;)

If you don't like my opinion/observations .... that's just too damn
bad ;)

I find that being able to copy morse code comes in handy sometimes
when trying to find out where some feed is coming from by
listening to a transponders ATIS audio subcarrier.

BTW, morse code is an international ham test requirement right now.

If you will be attending the Pacificon ARRL Convention, October 17-19,
in Concord, Calfironia, please consider attending these forums:

Sunday 1100, Marconi Room: NO Code
Is it time to end code testing? Bruce Perens K6BP says yes, and
explains why. How will we improve amateur tests to keep the lids
out without a code test? Bruce presents some alternate tests.

Sunday 1200, Morse Room: License Restructuring
Bruce Perens K6BP presents the ARRL's plan for license restructuring
and some alternative proposals.

SB DX @ WW $OPDX.326
Ohio/Penn DX Bulletin No. 326

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 326
BID: $OPDX.326
October 13, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W1RM, K2PF, KA2AEV, K4QD, W4WX, KD6WW, KG8CO, N9NC, W0YR, 9K2HN, 9V1YC, CT1BOH, EA3ELM, F6AJA, FK8GM, G3NYY, G3SXW, G4BUE & DX News Sheet, HB9BYU, I1JQJ, IK4TVP, PA3DZN, PA3AXU, RA3AUU, VK2ICV and VK4AAR for the following DX information.

3A, MONACO. Mike, W0YR, and Tom, N9NC, are planning a RTTY and CW operation from here, October 23-27th. On RTTY they will be concentrating mainly on North America contacts. They do NOT anticipate operating in the CQWW Phone Contest that weekend. Both have received permission to use the special prefix 3A7G which marks seven centuries of rule by the Grimaldi family. So, look for Mike to use 3A/W0YR or 3A7G/W0YR and Tom to use either 3A/N9NC or 3A7G/N9NC.
Meanwhile, the "DX News Sheet" report that Luc, I1YRL, will be active once again from here between October and December as 3A/I1YRL. QSL via home call.

3D, FIJI. Gerard, PA3AXU, reports to OPDX that the authorities of the Republic of Fiji have issued him the licence/call 3D2XU. He will be here from November 4-8th. He is planning to operate CW/SSB on 10/15/20 meters with 100 watts into groundplane. Gerard also states this is "No real expedition but just a holiday stop...." QSL to PA3AXU: Gerard Dijkers, Dr P.A.Cornethof 3, NL-6669 AZ Dodewaard, The Netherlands.

3W, VIETNAM. Just a reminder that a new IOTA will be aired this week. From October 14-20th, look for 3W6VT to be active from Con Dao Island which is part of the Conson Group. Refer to OPDX.320.

6V, SENEGAL. Chris, 6W1QV, and Didier, F5OGL/6W1AE, will be active as 6V1C for both CQWW SSB and CW Contests. QSL via 6W1QV: Christian Saint Arroman, Po Box 3263, Dakar, Senegal.

8Q, MALDIVES. Bruce, KD6WW, will be operating as 8Q7AJ from October 30th to November 10th. Activity will be mostly on CW and RTTY. He will be

active on all bands from 160-10 meters with an emphasis on the low bands and the WARC bands except for rtty. QSL via KD6WW direct, or via W6 bureau. Bruce will also take InterNet requests for bureau replies at: kd6ww@inreach.com. He asks that the request be titled "8Q7AJ QSL Request" and contain the usual information. Also, he asks that InterNet requests not be sent until after November 12th when he returns.

9U, BURUNDI. Alex, PA3DZN, will go to Bujumbura for a period of three months, possibly (probably) much longer. He will arrive there during the week of October 20th. With the assistance of Alfredo, 9U5CW, and Jean-Pierre, 9U5DX, he has applied for the callsign 9U2L. Alex states HAL Communications Corp. has sponsored one DSP4100 modem for digital operation, and Wyvern Technology Inc. included the latest version of the WF1B RTTY Contest/DXpedition software. Other equipment that he will take along is a Kenwood TS570S, a Ten-Tec Centaur amplifier, and a Force12 C4 (10-40m) beam. Antennas for the low bands are something that he will have to sort out locally with wire antennas, depending very much on the location. He also noted that he will be there on a work assignment. Therefore, operating time depends very much on the spare time he has. QSLs for this operation will go via PA3DMH, who also holds the logs for 9X5EE, 9Q2L, 9R1A, D25L, and ZS6/PA3DZN. Log search is available at: http://www.igr.nl/users/pa3dmh/logs/log_search.html.

A4, OMAN. Mary, G0BQV, will be operating as A4/G0BQV from October 16-24th. She will be on CW only, operating mainly on .025 each band. There was no info provided on 80 or 160 meters. QSL via G0BQV.

CORRECTION AND UPDATE. As mentioned in OPDX.325, Maurice, ZL2MF, and Ken, JA3MVI, will be Pacific island hopping. They have made a correction/update on the final leg of their Pacific islands tour. They will be active from the 3D-land as 3D2MF and 3D2KY from October 17-23rd, NOT 15th to 23rd as first reported.

C6, BAHAMAS. The CCDXA (of North Florida) will be active from Treasure Cay October 21-28th. The club will be a Multi/Single entry in the CQWW SSB Contest using the callsign C6AJT. Members will be active before and after the contest on SSB, RTTY and CW on all bands. Operators will be: Mac/KM4WE, Clarence/W4CJK, Joe/W4USN, Gary/K4GZ and Bill/W4WX using /C6A outside the contest. QSL C6AJT contacts to W4CJK and others to CBA or via bureau.
Also, Jon, EA2KL, and Lluis, EA3ELM, members of the LYNX DX Group, will be active from Abaco on SSB/CW all bands (including 12 and 17 meters), from November 2-9th. The callsign that they will use is C6AHN. QSL via EA3ELM.

FK8, NEW CALEDONIA. Look for FK8GM during the CQWW SSB Contest. Operators will be Eric/FK8GM, Alain/FK8FI and Franck/FK8HC, and they will be a Multi/Multi entry in the contest. The QSL via WB2RAJ.

FP, MIQUELON (UPDATE). As mentioned in OPDX.323, operators KG8CO, N8CC, K8AEM and W8MC would be active from here October 23-28th. Activity will be on 160-10 meters with the various modes. They announced that they

will be active as FP/KG8CO in the CQWW Phone Contest and will operate as a M/M entry. QSL via K8AQM.

FT5W/X/Z, CROZET, KERGUELEN AND AMSTERDAM ISLAND. There are conflicting reports on this on! One report states Rene, FT5X/FR5HR, heard from Kerguelen Island, will be active for about one more week before he goes to Amsterdam Island (FT/Z). Another report states, Rene, who was heard on maritime mobile headed back to Reunion Island. He will be there a week or so before going to Crozet. A comment was made, "As he is on a French Navy ship, he said plans can change at any time. So keep your ears out for him active from any of FT5 terrritories in October". Check 21217 kHz around 1345z. QSL via F5RRH.

KG4, GUANTANAMO BAY. KG4QD will be active as a Multi-Single during the CQWW DX SSB Contest October 25-26th. Jan, K4QD (ex WA4VQD), will lead a team consisting of Al/K3VN (ex WA3YVN), Bill/N2WD (ex WD4GDZ), Rusty/KG4AU and other amateurs at GITMO for this contest effort. The team, members of the Central Florida DX Assoc. (CFDXA), will arrive Thursday, October 23rd, and depart Wednesday, October 29th. During non contest periods, look for Jan/KG4QD, Al/KG4VN, and Bill/KG4WB operating primarily on the WARC bands. The team also plans to try some six meter activity. The contest logs and photos will be available on the WEB shortly after the contest. A log search test site containing KG4QD logs from October, 1996, and February, 1997, is available at "http://www.ham.net/cfdxa/gitmo". QSL via home call for KG4QD, KG4VN and KG4WB.

P4, ARUBA. Jose, CT1BOH, will be active as P40E one week before the CQWW SSB and CW Contest. Activities and operations were not provided. QSL to W3HNK for both CT1BOH and P40E.

QSL INFO AND NEWS.....
Nino, IK8ENH, has announced that he is the new QSL Manager (Europe only) for Jose, CO3CL.

Mac, WA4FFW, reports that all QSL cards for the N4BQW/KH4 (Midway), KH6 (Tern), and KH7K (Kure) trips have been answered. This includes all SWL, Bureau, and cards received directly. There were a few not in the logs, and those cards were returned to verify dates and times. Mac appreciates the help he received from WJ4T and the patience from the DX community. Mac will continue to process requests for any of the above contacts on a daily basis.

Jean, F6AJA, reports he has the F2JD/HP1XBI logs up to September 15th. All direct requests are on the way. Gerard will probably stay in Panama up to December.

QSL 6W1AE via F6AJA direct or via the bureau BUT not via F5THR.

Andy, RW3AH, is very active all over the bands from Rwanda as 9X0A (ex 9X/RW3AH), and he is planning to stay there until February, 1998. He has changed his QSO route. Andy was asking for QSLs to be sent to his home address. Unfortunately, mail still gets lost in Russia, and he decided to change his QSL policy. Jeff, DL5WM, was appointed as 9X0A

QSL Manager. All QSLs for 9X/RW3AH still should be sent to RW3AH's home address: Box 899, Moscow, 127018, Russia (they are being handled by Toivo, RA3AR). He made 7900 QSOs as 9X/RW3AH.

A new QSL Manager has been appointed for 5V7A (upcoming 1997 CQWW CW Contest). QSL via GM4FDM. His e-mail address has changed, and they will accept E-mail QSL requests for replies via bureau. Please note that the E-mail address to which these should be addressed has changed to: wylie@sol.co.uk Note: QSLs for 5V7A (CQWW CW Contest 1996) continue to be handled by GM4AGL.

SPECIAL EVENT. Look for special event station HB4FG, October 18-19th, from the Swiss Army Amateur Group. They will be active from Vallemaggia/TI for the Jamboree on the air with the Scouting Group of Vallemaggia and Daro. Activity will be on 80/40/20 meters. A special QSL will be received via bureau.

SV9, CRETE. Walt, SV9/G3NYY and Tim, SV9/G4VXE will be very active on CW from Crete (IOTA EU-015) from October 14-21st. They hope to operate on all bands 160-10 meters, and there may also be some 6 meter activity. QSL for SV9/G3NYY via G3NYY and for SV9/G4VXE via G3SWH (direct or via bureau for both).

T7, SAN MARINO. During the next CQWW SSB Contest, look for T70A (San Marino Club) to be aired as a Multi/Multi or Multi/Single operation. The opertors will be: DF6QC, DL2MEH, DL4OCL, DL8OBC, I4ZQS, IK4TVP, IV3NVN, IV3TAN, IV3TMV, T77BL, T77C, 777LL and T77WI. QSL via: P.O.BOX 77, San Marino A1, 47031 Rep. San Marino.

TF, ICELAND. NODXA member Phil, KE8RO, and Sean, KC8CSD, will be heading to Iceland on October 16th. They will arrive in Keflavik on the 17th. They plan to operate HF, both SSB and CW, on as many bands as possible. Phil's license has been issued and his call is KE8RO/TF. They will be in Iceland from the 17th through the 24th of this month. Direct QSLs can go to KC8CSD, or via the bureau to Phil's homecall.

TO5, MARTINIQUE. Ralph, K2PF, reports that Steve, KU9C, and he are heading here for the CQWW SSB Contest this month. They are not sure what their callsigns will be, but expect a TO5* or TO5** callsign. They will be on all bands. Activity will take place before and after the contest, and they will likely include WARC bands, RS-12 and perhaps RTTY. QSLs via K2PF.

V2, ANTIGUA. Team Antigua is once again pleased to announce that it will be activating V26B in the upcoming CQWW SSB Contest in late October. They will be entering the contest as a Multi-Operator/Multi-transmitter catagory from Antigua (Grid Square FK-97 -- IOTA NA-100). In addition, the Team would also like to announce that both the 5 band and 6 band "Certificates of Appreciation" will be available once again for the 1997 operation. Briefly, to qualify for these special certificates, all you have to do is work V26B during the CQWW SSB Contest period on either 5 bands or 6 bands to receive the special "Certificate of Appreciation".

Members of Team Antigua will also make special attempts to be active on the WARC Bands, RTTY, and 160 meters. Here are the members of Team Antigua and their QSL routes:

V26AK - Tony, QSL via WB2P or N2TK V26RS - Tom, QSL via N2SR
V26B - Sam, QSL via WT3Q V26TS - Tyler, QSL via K3MM
V26E - Darrell, QSL via AB2E V26U - Bill, QSL via W2UDT
V26R - Mike, QSL via KA2AEV
V26RN - Bob, QSL via N5NJ

Team Antigua would also like to welcome to its family the following new members: WX0B/Jay, W3FV/Barry and N3OC/Brian. Also, please check out the V26B WWW site for complete details with photos and descriptions of their station. Its URL is: http://WWW.frc-contest.org/v26b.html
Please also note that in Team Antigua are members of The Frankford Radio Club who is celebrating its 70th Anniversary and is sponsoring a very special award. Additional information for this special certificate and a full list of members of the Frankford Radio Club may be found at: http://www.frc-contest.org/70th.html

VI0, MACQUARIE ISLAND. Alan, VK4AAR, reports that the special event callsign "VI0ANARE" will be used from Macquarie Island from October 25-31st, and then it will not be used anymore. The custodians of this callsign (celebrating the 50th anniversary of the Australian National Antarctic Research Expeditions (ANARE)) insist that QSLs go ONLY to VK4AAR direct with return postage and self addressed envelope:
Alan Roocroft, c/o Post Office, Dalveen. QLD 4374. Australia.
From November 1st, the boys on Macquarie will revert back to their own callsign and QSL managers until their return to Australia soon.

VK9, LORD HOWE ISLAND (Update). Dan, K8RF, and Nick, VK2ICV, will be active as VK9LX. Due to the cancellation of the 3C0 DXpedition, they have an opportunity to borrow the Battle Creek Special antenna to operate on 80/160 meters. Unfortunately, they are faced with both time and financial constraints in their effort to get the Battle Creek Special antenna to Lord Howe. As the Lord Howe DXpedition is without any commercial sponsors, their budget is already stretched to the limit. For this reason they appeal to the DX community for help. If interested in helping, donations can be sent to: Lord Howe Island Dxpedition VK9LX, c/o Nick Hacko, P.O Box 730, Parramatta NSW 2124, Australia.

Code is not the only type of emission allow. If someone chooses not
to run packet does that mean they should find another hobby that they
can do?

Perhaps you should install a key on your cell phone and communicate
using Morse Code to insure privacy.

Many folk feel it is their right to be able to at least detect the
presence of a transmission that is passing through their property or
person.

I used an analog cell phone when they first came out but now I use a
TDMA type which costs less than my original analog and air time is
less expensive. Encryption is a byproduct of more efficient band
usage and it ends up being less expensive. I personally do not care
if someone listens to my conversations but when I upgraded to a new
phone TDMA was cheaper. It also doesn't interfere with my scanner
nearly as much as analog did.

If you are truly worried about privacy and cost you'd do well to
upgrade to a new TDMA or the newer CDMA phone. They come with a lot
of features that aren't available on analog and aren't the bandwidth
hogs that analog is.

I'm thinking about going for the no-code Tech license. I'd get it
strictly for two meters. That's all I want it for. Having a ham

license doesn't require a person to do anything with radio. Why get so hung up on code. I could learn it easily but what is the use if I only plan on using 2 meters. If I find that I'd like to get into some of the lower bands it's really no big deal to take the code part of the test. Knowing the code does not make or break the moral integrity of the individual.

You'd do well to welcome as many people as possible to the hobby else the ham bands will get sold out from under you.

Mike

No, but does that mean that any questions having to do with packet
should be removed from testing? RTTY and Slowscan are old technology.
Why are they on the test? Shouldn't they be excluded too? If one doesn't
plan to operate VHF, should they still have to be tested on those
concepts? Where does it end?

Glenn

Wrong Wrong Wrong

Morse code was required to mitigate interference that hams may have caused with other radio service with which they were sharing bands. Hams had to know code so they would understand when another station told them to shut up because they were causing interference.

Not a problem today. Just about every radio service amateurs share spectrum with have abandoned code for anything beyond automated identification.

Hams have retained the code requirement and the incentive licensing system in as a hazing ritual to get an amateur ticket.

All of the nonsense about code being required because of great emergency communications potential is just that - nonsense. That may be why a FEW people want to keep it but that is not why its still required. Most of the code supporters just want to keep their version of a spanking machine.

Why this is in a boating and video newsgroups is beyond me. Resetting followups as appropriate.

Wasn't there ten amendments to the original Constitution?
If so, then if a member of Congress breaks the Constitution, what
recourse do we Americans have?
I'm not sure , but I'd assume the CONSTITUTION wouldn't protect
members for their official
violations of our God ordained rights.

BTW, The Constitution isn't worth the paper it's written on.

> Annapolis?

My understanding is that the military only trains a few "intercept
operators" any more ... the regular communicator/technician MOS's
don't get brainwashed with Morse any more because they don't USE it
any more ...

> How does it explain the return of Morse to the MARS operations?

That was a fallacy ... it never happened ... a mistaken report,
apparently released by an over-zealous pro-code person ... and
SPECIFICALLY refuted and recinded by the TOP person in the MARS
area ... the outright BAN of Morse on MARS frequencies was NEVER
recinded and STILL STANDS ... that's how much the military "values"
Morse ...

> Apparently
> many still regard Morse CW mode as more than a quaint recreational
> exercise.

Really??? Other than you and Larry Roll and a few others who *claim*
it has incredible value and mystical powers, WHO???

Certainly not the military, not MARS, not commercial services, not
the maritime community, not the emergency services .... nobody but
a few "die-hard" hams ... and they constitute a small minority of
hams ... only 27% use Morse "regularly" according to the ARRL survey.

Wake up, return from dreamland, and get a life!

Believe it or not, I actually agree with you. I'll also take it a
step further, and predict that within 20 years Morse will become a
novelty mode similar to AM on HF today. The plain fact of the matter
is morse requires too much "effort" on the part of the user in order
to communicate, and as amateur radio is turned more and more into a
personal radio service, that "effort" will conflict with the inherent
goals of a PCS-type service -- quick, effortless communication.

>> All those bright young

Sounds to me like they're just pissed that WE won't kiss THEIR asses and
hand them a "get out of Morse free" card because their intellect somehow
warrants it.

(more bogus "millions of techno-geniuses being kept out of ham radio,
just waiting to create interstellar travel using their TI calculators
and ham radio if only that nasty code test were eliminated" BS deleted...)

This is an interesting observation, that most hams in the USA are males of European descent. Don't know why for sure but I can speculate that it has less to do with money, or any type of bias and more to do with an overall decline in interest in the hobby. There are more middle income non-whites today than at any other time in history. However in the 90's there is a greater diversification of avocations than at any other time in history. There are other outlets available to people in pursuit of their technical and non-techinical interests, most notably the Internet. I think you'll also notice a graying of the ham radio population. There just aren't as many new people coming into the hobby as there were in the past.

John,

I owned one from 1993 to 1995. Its a great radio for new hams to use on the HF bands and its also very affordable. You only need to buy those bands you need. With the sunspots on the rise, you would be able to do quite well in working DX with that rig and a dipole cut for your favorite band.

Good Luck on the test!

73,

Bryan

What is the ARRL's license restructuring proposal?
I have suggested for years to simplify. Too many
classes of licenses and too many license elements.

William is correct...BUT the license was nothing more than
filling out an application. No test required at all.

Have a fairly new (6 months) 2.5 Gig hard drive, would like to trade for PDC 600, or similar type meter, would consider any other 11 Meter equipment but need a good meter.

E-Mial responses to docfranknstien@hotmail.com

Thanks

Maybe somebody could explain to me exactly what's wrong with having
"thousands of people crowding the spectrum?"

And why are "you" a non-ham. so worried about the amateur spectrum?
Just listen to your venerated cb channels where a 5 watt mobile can't
talk more than a couple of blocks without an amp, justify this.
The phenomonom you speak of (nasty language, arguements, etc.) often
ocure when any conversation is not face to face, as it is much easier to
denigrate another from an anonynous, faceless venue. Example; If you
send me nasty e-mail and if I retaliate the vicious cycle perpetuates
until one or both parties get tired. Rarely do face to face meetings get
so heated, those that do usually end with one or both parties injured

and or incarcerated, by todays cultural standards someone often ends up dead.
So I agree with you about 80 mtrs at night is not the most hospitable environment, just as 11 mtrs or especially the internet where there is no form of id needed to participate.
So to separate two or more combatents creats an abnormal anonynous situation where they're darker sides emerge into conflict if the need arises.
Though I have never heard an arguement on cw I'm sure it has happened!
Example; op #1: u jerk....op #2: u lid 73 callsign and end of qso.
P.S. Don't worry about Hams, we'll be fine.

Hello All,
I have a Radio Shack Realistic PRO-30 VHF Hi-Lo-Air/UHF 16 Channel Programmable hand-held scanner for sale. Model Number 20-131. Frequency range stock is 30-54, 108-136, 138-174 and 380-512 Mhz.

Unit is in excellent condition. No power supply. Best reasonable price accepted. Ship UPS COD.

(snip)

You missed my point. The no-coders are saying CW is useless, old technology and the like. I say so is RTTY, Packet, AM, SSB and the like. If you throw CW out because it is useless and boring than you have no reason to leave the other modes in either. Why should I know the band limits, I only want to operate on 20 meters. Why should I know antenna theory, I will pay someone to do my antenna work. Why should I care about different modulations, their abbreviations and such, I only work FM. Why should I have to learn all the formulas and principles to get my Advanced Ticket, I just want the extra frequencies to use during contests! Why not open it to all like CB? All the theory test is a hazing ritual, most hams would fail the theory test if they had to be retested today. Why give a test at all?

No, RG-8U is no longer a recognized milspec, it was superceded by RG-213.
RG-8 is just a generic label now, and anyone can put it on anything, including
the sorry excuse for lamp cord sold by Radio Shack.

661. Class C amplifiers limit AM in an FM amp?

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-12 00:00:00 UTC
From: electron78@aol.com
Message-ID: <19971012010100.VAA26798@ladder02.news.aol.com>
Source record: 188927

I have read that class C amplifiers can limit undesirable amplitude variations in FM amplifiers -- acting somewhat as limiter stages. Is this so? If so, how does a class C amplifier automatically accomplish this feat?

Thanks!

Mike

>Why?

two reasons. first, anyone in a technical field or hobby is going to be
lampooned. look at the computer "nerd" jokes, etc.

the second reason is more obvious; have you ever gone to the dayton
hamvention and seen that guy wearing a hardhat with a 4' tall tower
on top of it?

that alone is a pretty good reason to make fun of hams. :-)

If you are planning to attend the Pacificon ARRL convention, October 17-19,
Concord California, please consider attending these forums:

Sunday 1100, Marconi Room: "NO Code"
Is it time to end code testing? Bruce Perens K6BP says yes,
and explains why.

Sunday 1200, Morse Room: "License Restructuring"
Bruce Perens K6BP analyzes the ARRL's license restructuring
proposal and presents some alternatives.

My thanks for MDARC and ARRL for allowing me to present opposing viewpoints
in an ARRL-sponsored conference.

That is the one aspect of racist/sexist behavior that
I must also condemn. Those hams that express those
comments are a disgrace to all hams.

And again, as to there being more male hams than
female...well that's just gender related interests. I for
one care not at all about recruiting any specific group
to ham radio. I believe we should simply recruit people
and if the general trend of interest produces more males than
females, then so be it.

I realize Warren's post was
in jest to point out the fallacy of expecting any enforcement
of the cell/cordless privacy laws.

But, again, ownership of a scanner is not a crime anyway, so
there's no basis for any federal agent to bust any door to
gain entry since there's no crime.

What difference does it make how fast someeone is
sending to know/hear that a frequeecy is in use? I sure
can't read digital yet I know what it sounds like as and
can therefore tell if a frequency is in use on that basis
too.

>Does that mean to fire up the old rock crusher and
>tune up here? Wake up and smell the Morse "UNK". It's a

The practicality is missing on your side. You seem to think
that if I can't read 20wpm code then I can't tell if the
frequency is in use. What rubbish.

>How much chaos and interference
>(world wide, now with the sunspots coming up) are you

class "c" operating over a small percentage of the input signal, the
flywheel effect of the tank circuit completes the 360 deg of the
cycle....the flywheel effect has no ability to respond to amplitude changes
from the input since only 10 to 25 percent of the input signal causes
conduction of the class "c" final amplifier....alsof you are only
interested in "fm" you may want to run the class "c" final near saturation
so that it has even a smaller chance to respond to "AM" induced by input
changes or power supply voltage changes. I hope this will be of some help
to you K2IJY DAVE

Hm. As one of the people Vonnegut describes (in all respects except Indiana), I'd say his story is an example of people whom technology gave a whole new dimension to life as human beings. I treasure the friendships I have all over the world as a result of ham radio.

I need anything that I can get on this '40's? Radio. I am new to the field of amatuer radio but bought it for SWLing. I think it might be a transciever but am not sure. If it is I don't know what else I need for a station.

Vintage Air has the manual for $16 but I only gave $15 for the unit complete with speaker. As far as I know, everything works.

If anyone has any ideas or info please e-mail at <woodzy@tntech.campus.mci.net>

Thank you
Michael Wood

675. One simple common language, which we already have - Esperanto

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-12 00:00:00 UTC
From: wmunsil@aztec.asu.edu
Message-ID: <61pip2$pt3@news.asu.edu>
Source record: 188941

Someone mentioned needing one simple common language for international
"QSO's". For over 100 years we have had just that in Esperanto.
Esperanto has been used for a common language in HAM radio since the 1930"s
or so and for "eyeball QSO's" for 110 years.

As a planned language, it is much simpler to learn than any national
langugae - from 1/3 to 1/4 the time at the same level of fluency.

Unlike national languages it is totally logical and totally regular -
e g, no irregular verb forms, no pronoun-dependent verb forms either.

It is also grammar coded: all nouns end in o, adverbs in e,
adjectives in a, and verbs (infinitives) in i.

ILERA (Internacia Ligo de Esperanto Radio-amatoroj) has been in existance
since the 1930's also and has members in several dozen countries.

Esperanto is spoken worldwide in over 120 countries by upwards of 2 million
people.

I encourage all HAM operators to investigate this wonderful, easy-to-learn
language - the neutral, second-language for the entire world.

Well in any event I think they are wrong (hey it's possible!). They also said in that one survey that most hams want to keep code. I don't believe that either considering the number of techs we have now that won't upgrade. Me, I'm still trying to get my code up high enough to get my general. I'll get there but it's slowing me down.

Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave

12/10/97 -- VisualRadio, the sophisticated RS-232 control package from Liedtke GmbH, now has a demonstration version available via FTP.

Featues of full program include:

*Controls a wide range of popular radios. ICOM all models (including the R-8500), JRC NRD-525, NRD-535, KENWOOD all models, RACAL 6790/GM, YAESU FT-736, FT-840, FT-900, FT-990, FT-1000, FT-1000MP, FRG-100, FRG-8800, Selected AOR models.
*Control Panel. Signal and frequency display; mode, agc, etc...
*Signal Display. Analogue S-meter display; max-hold; choice of dBm, uV, mV, S, RMS or peak. *AF Analyser. Audio frequency spectrum derived from sound card (not supplied); 2.5/5 kHz sweep width; Peak Hold/Average; frequency at mouse pointer; Zoom x1, x2 or x4; Length 256, 512, 1024 or 2048 points.
*Networking. VisualRadio can be used in a Windows-compatible network environment
*Tuning. Receiver tuning via double click on the corresponding data in a table or on the desired frequency in a graphic display. Frequencies, mode of operation etc. can be easily transferred to the Masterlist, Channel Table and Log File; Automatic identification of stations at tuned frequencies
*VR/Link. Link together two radios for dual operation using a pair of serial ports
*Database. Unlimited number of Microsoft Access compatible databases; Additional features - user defined fields, filtering using SQL queries; SQL query save; sort fields a click of the mouse; search and replace all data in table columns
*Timer. Timer-controlled scanning with automatic recording of broadcasts
*Audio Recording. Recording in Windows WAV format
*On-line User's Guide. A comprehensive on-line User Guide in Windows help file format guides you through all the features of the package. There is no printed manual..

VisualRadio is available in the UK from Simon Collings, Radio Communications Consultant. Point your web browser to the following URL for details of this and other radio related products:

http://wkweb4.cableinet.co.uk/simon.collings/products.htm

Please note: FTP server currently has a limit of 32 users - if you get an error please try again later.

: to the lower governments. What "constitutional" federal law
: was broken by the actions of the local constables?

Seizing and selling the equipment at auction (as the Sheriff says he is going to do), without the person even being tried and conviced, is certainly violating our rights to "be secure in our property". But that right went out the window about a decade or so ago, with the War on Some Drugs".

What would you say if, the sheriff said you were speeding, and confiscated your car. He then sold it at auction - without you even being charged with a crime. It happens all the time, only the "crimes" are different.

And, this "broad brush" that you use is one of the reason many of us do not take you seriously. You appear to be just as much a fanatic, and just as desperate, as those you detest.

Now, if the code requirement were eliminated, I would quickly become an Amateur Extra. I have enough electronics background that the theory is trivial. However, I believe in earning my privileges, rather than having them handed to be on a platter -

The argument that CW is outmodes is meaningless. So is any voice mode, as the digital modes are far better for weak signals. For strong signals, FM is probably better than SSB.

For that matter, HF is unnecessary. Local repeaters work fine for local work, and Geosync satellites could be put up for worldwide coverage.

Just think - if everything was digital and EHF, then we could get rid of all the large towers and linears.

Bill (dont@have.mail) wrote:
:
: >If I tell you I have a scanner capable of cell phone (or cordless)
: >reception, what can you do to stop me from listening?
:
: Nothing, unless you are dumb enough to tell him where you live and if you admit
: to listening to Federally controlled frequencies. A phone call to the FCC would
: probably ruin your day.

Simple words are not enough - the person could be simply bragging, for some unspecified reason.

Statements made to a law officer could be a problem, as the officer's statements in court would probably be considered more truthful than yours.

Statements under oath/affirmation would have the highest weight.

: >If I tell you I have a scanner capable of cell phone (or cordless)
: >reception, and I use it to listen to your cell phone conversations,
: >how would you know and then PROVE I did so?
:
: By your own admission in writing, duh.

Once again, unless it is under oath/affirmation, it is only evidence. It is NOT proof.

: >If I tell you I have a scanner capable of cell phone (or cordless)
: >reception, and I use it to listen to anyone's cell phone
: >conversations, how would the FCC know and then PROVE I did so?
:
: Again....by your own admission.

See above.

: If you don't think so, why don't you put it to the test for us. You seem pretty
: confident that nothing will happen. So...test it for us will ya? Tell us where
: you are, tell us that you are listening to cellular right now and see what
: happens after someone places a call to the FCC or your local police.

Legally, the local police cannot do anything - unless there is a local law against listening. Even then, they would have to find direct evidence (very hard to do). A phone call is only a tip - and it could be completely bogus. I doubt if the local police would do anything but laugh.

: Since when is it impossible to be guilty until proven innocent? Seems to me
: that you'll be the one PROVING you weren't listening to anything illegal.

Not if the laws work the way they are supposed to work - which they do not,
in many cases these days. You are supposed to be innocent until proven guilty,
not the other way around. Sadly, this is often not how it goes.

: don't like people like you invading my privacy. Besides, you need a life
: of your own if you don't have anything better to do than to stick your
: nose where it don't belong.

If I were using a cellular phone, which I often do, I wouldn't mind in the least. After all, it is a two way radio. I have no expectation that the conversations will be private - until the cellular providers go to encrypted digital.

It is trivial for you to do the same. If you want your privacy, you have some obligation to attempt to obtain that privacy. You can do that with phone conversations by simply using that funny looking handset that has a cord on the lower end that plugs into the other funny looking box with the pushbuttons on it.

And, before you jump on me, I do not listen to the cellular band - even though I have a scanner that could be modified in a couple of minutes to do so.

If you mean accuracy to one or even to single digit nanosecond
accuracy, I've not heard about them. And 10^-12 doen't mean anything
to me as a measure of a clock's accuracy, perhaps this refers to the
accuracy of a frequency sub-standard?

Why would the use of a cesium timebase that is orbiting a few hundred
miles up and perhaps a couple of thousand miles away be more accurate
than one that is closer to you without uncertain propagation delays?

> complete with speaker. As far as I know, everything works.

It is NOT a transceiver. The receiver was manufactured 1947-50. It is a
13-tube single conversion reciever covering .54-31 and 48-56 MHz in AM
and CW modes. See page 242 of "Shortwave Receivers Past and Present,
Volume 2" by Fred Osterman. Get your copy from Universal Radio
<http://www.universal-radio.com/>.

Hope that helps... de W2XQ

694. North American Collegiate Club HF Championship

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-13 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <61tdsv$ll2$1@w3eax.umd.edu>
Source record: 188760

With a little less than 3 weeks before the CW portion of the Collegiate
Championship we've reached an important milestone. Last year 32
schools submitted official scores and as of today 32 schools have
announced participation for this year's event!

We need even more schools. The ARRL's Contest Advisory Committee
is taking up the issue of whether Sweepstakes should officially
sanction a collegiate category. In addition to sending your comments
to cac@arrl.org you can "vote" in the affirmative by getting your
college
club station on the air and sending in an official entry. Better yet,
get
your rival schools active as well! If you know some Hams that attend
schools that are not listed below please get in touch with them and
encourage them to participate.

73,

Robert KA5WSS

Fourth Annual North American Collegiate
Amateur Radio Club Championship

1. Object: To encourage college and university stations
in all ARRL (American Radio Relay League) and RAC
(Radio Amateurs of/du Canada) sections to participate
in the ARRL November Sweepstakes and compete against
other college and university radio clubs.

2. Contest Rules: CW portion takes place on first full
weekend of November (Nov 1-2), phone portion takes place
on third full weekend of November (Nov 15-16). Both start
on Saturday 2100 UTC and end on Monday 0300 UTC. All rules,
as stated in the October issue of QST, pertain to this
collegiate competition. Participation limited to clubs at
institutions of higher learning beyond the high school level.

3. Station Location: In an effort to encourage club station
improvements all contacts must be made from the established
club radio station located on a college campus. No
"portable" operation from a nearby contest "super station".
A club may operate from a member's station provided that a
club station on campus does not exist.

4. Results: Separate champions will be determined for CW,
phone and combined scores. Official results will be based
on those published in QST so all contestants must submit a
valid log to the ARRL. Contestants must also submit a score
summary (the contest summary sheet, NOT a complete log!) to
the collegiate contest moderator. Provisional scores and
winners will be posted on the ham-univ and cq-contest
Internet mail reflectors by the moderator and will be
available on the Collegiate Championship home page
(http://www.utexas.edu/students/utarc/cc/).
Send results to:

Internet: ka5wss@tapr.org
Mail: Robert Barron
P.O. Box 180703
Austin, TX 78718-0703

5. Awards: Certificates will be available for participation.
The sponsor for 1997's awards will be W4ATC, North Carolina
State University Student ARS. Any college club submitting an
official entry and any station working at least 10 Collegiate
Championship competitors (count schools once each mode) is
eligible. To receive a certificate send a 9x12 SASE by 12/31/97,
with collegiate club QSO's excerpted or highlighted to:

W4ATC Radio Club
NCSU Box 7911
Raleigh, NC 27695

For more info about certificates contact N3QYE: n3qye@jbj.org or
via above address.

Some rules clarifications:
1. Entries are not limited to multi-op. Single op efforts
may submit their score as their official school effort.
2. Entries limited by ARRL Sweepstakes rules to stations in the
US, US possessions and Canada.
3. All club members are allowed to participate (including alumni).
4. Club station location rule waived when no club station exists.

I use one here suspended from a tower at about 38 ft. and it works
very well. If you have room for full sized antennas by all means
put them up but if you don't the DX-A is a good compromise. With
some carefull trimming they will tune to resonance easily and give you good
coverage on all three bands.
Good luck
Jerry W4RF

This whole business of "private conversations" on "public" airwaves is
no different than holding a "private conversation" in a crowded room
with both parties shouting at each other from opposites sides of that
room. Silly, in the extreme. How dare the other OCCUPANTS listen!
And then, add the "lawmakers" and "money makers" to the brew.. Thou
shalt not listen to private conversations on public airwaves. It is
insane!!!
The solution is a technical one. The manufacturers can make secure
systems, but IMHO fear a public backlash at the cost. Sheesh. Is there
no end?

Source record: 188766

In article <3441CB50.BD9881C5@ix.netcom.com>, Jim Storm
<jastorm@ix.netcom.com> writes:

>most people would think if they knew their physician was shoed in without
>passing the necessary criteria? Wanna be a ham without code, then let's let
>your physician be a doctor by passing a written test and never performing
>surgery...

Most MD's & DO's don't regularly perform any but very minor surgery.
In fact, surgery isn't even a major point of concern for most. Second,
the usual means of telling whether or not a physician is qualified to
practice in most states, is a 3 part written test presently, with possibly
one year as an intern for practice. If the right internship is picked
out, the fledgling physician won't even see a scalpel, and that is
indeed a good thing. A physician's competency isn't usually judged
by the ability to cut, unless the physician is a surgeon despite the
licenses in most states authorizing a Physician and Surgeon.

Perhaps a more telling analogy with physicians, would be requiring
a physician to learn how to make a limited set of drugs from things
in the environment to treat patients, which also at one time was part
of expected practice. I would suggest leeching, but even leeches
and maggots have a limited role in present day medical practice, one
which most physicians don't ever get to use. Yes, a simple
receiver and transmitter can be used to communicate with cw, but
frankly, most of the people proclaiming love of CW COULD NOT
build a working transmitter or receiver from scratch, and communicate
in an emergency. Telegraphs have mostly disappeared as a way of
communicating, and indeed when's the last time anyone on here got
a real live telegraph. Western Union is really in the money forwarding
for a fee business presently, not the telegraphy business, and last time
I saw a telegraph office, it used a teletype machine, not somone with
a sounder to decode the message. CW is outdated, and not of
much use in an emergency, because there aren't all that many people
capable of decoding cw reliably in the present population. The navy
still has semaphores, but it doesn't still use telegraphy to communicate.
If you want to proclaim cw as a part of a hobby, that's fine, but even those
hams who have passed a cw exam, don't regularly use it. If cw is as
much fun to use as proponents claim, then let them demonstrate the
fun, and recruit new users rather than trying to force cw for HF privileges,
and the status of being a real ham. I passed my cw exam in front of
the FCC, that doesn't make me a better ham, or human being. I've
probably built more simple HF rigs than most cw proponents, and gotten
them working, I still say if CW is fun, then people will flock to use it, if
not, it deserves to die out just like other obsolete practices.

The FCC is not mentioned specifically in the constitution but they
regulate radio under the authority of regulating interstate commerce.
Radio signals do not recognize state lines so the federal government has
determined that the regulation of such communications is in thier court.

I don't mind the basic concept of local law enforcement taking doing
enforcement of FCC rules and regs. The problem is they aren't
quailified to do it. You think that Officer Jones knows that difference
between a C.B., an amateur station, an marine radiotelephone, or even a
private land moble radio (like the one he has in is patrol car)? Do
you think is his knowledgable enough in the rules for each service?

Even hams aren't qualified to make enforcement decisions outside of
amateur radio. Their license does not indicate that know anything about

the legal requirements outside of ham radio.

How long will a fully charged FNB-41 9.6v 600mAh connected
to the FT-50 last if the radio is not used.I went away for a week
and came back to a dead radio.Is this normal?I never let the unit
just sit for that that long since i purchased it and thought the battery might
be going bad or the radio has a drain.I've heard about the power button
revision,but i have the power save set to turn off after 30 minutes.Any ideas?

Thanks

Hello, this is Harry Miller KB6CGG in sunny California. In cleaning out the shack to make room for my computer, I found the following items:

2 Atari power supplies

1 Dr. DX for a Commodore C64

1 MFJ 1282B for Commodore C64

You may purchase any of these gems for $5 each, mailed. If interested, email me hmiller@fix.net or call me 805-528-0261 or send me a $5 bill to:

Harry Miller
1580 Nipomo Ave.
Los Osos CA 93402

Tnx es 73, Harry KB6CGG

Unless you are talking to yourself that should happen, correct? I see
nothing wrong with that. That is how many transmitter problems are first
diagnosed. On the air. Big deal.

That is what is left in the brain after the test is passed in the majority
of hams. If I don't use the theory in practical applications periodically
I won't retain it. Sorry, it is a hobby, at times an obsession but it
isn't my life.

HAHAHAHA! A bit too extreme but I get your point. All you've done is cut
out the VE and ARRL. I doubt that in a year the bands would sound much
different. Well, maybe a bit. The good propagation is finally coming back
our way on the higher bands.

The bottom line for me is this. Both the code and theory test are nothing
but a hazing routine forcing all members to go through the same ordeal to
obtain certain privileges. There is no discrimination, we all take the
same (well sort of) test and have to jump the same hoop to get the class
license we want. So what? Life is like that. The hazing has the purpose.
It shows that your passion for radio is strong enough that you will study
and take a useless test to prove that devotion! (Or is it an obsession?)
We don't need some mamby pamby wannabe CBers mucking up the bands! Hell,
after you pass the test you should have to run the gauntlet. Two lines of
hams whipping at your butt with rubber duckies! Yea, let's add some pain
to the hazing too!

I know it doesn't make much difference to some of the people on this
thread, but I thought you might like to know that one of the earlier
responses said the base story was false. This thing goes on forever.

Hi,
I recently received an Ultimeter 2000 from Peet Bros.
Unfortunately they did not supply the serial cable for connection to a
PC,I`ve requested a replacement but have no guarantee that it will be
sent. I`ve attempted to wire a cable with an existing 6 pin connector
that I have. Does anyone know the wiring to the 9 pin connector ?
I know that black is the Ground but after that I haven`t a clue.
If anyone can help it would be appreciated.
Many thanks,
de Alan. (EI3EBB)

even with the power "turned off" the radio will draw a very small amount
of current and also your battery may have more of an internal resistance
that causes it to self discharge over a period of time (this is normal
to a small extent) my call would be to send the battery into who you
bought it from saying it would not hold a charge (that is if it is
still under warranty)and then make the same test with the new battery to
see what the difference is.
73's n good luck

Don't forget that an amateur license entitles you to put a
1500W transmitter on the air without type certification or
other 3rd party testing. The presumption is that circuit and
communications theory is needed so that the hams who do so
can design and build circuits that will meet the FCC's spurious
emissions requirements. It is true that fewer hams now
exercise these privileges than before and so it can be easy
to forget the purpose of the theory test. But hams should
remember that if their commercial rig starts putting out
unwanted harmonics and intermodulation products that the
FCC regulations state that they are responsible for those,
even if they did buy the rig as a sealed package from YIK.

If you want to have a license which doesn't have those
privileges, doesn't require theory testing, but does allow
HF access, then the closest license to that is probably CB.

I notice the entire 50 hours will be spent in mostly in the CWportion
of each band, except perhaps 160 where there might
be more SSB signals above 1850 than below, at least
that is the usual way it is. BTW, 0200Z is 4 pm here in Hawaii.

Personally I find it difficult to believe that the big money interests, namely the telecommunications industry, isn't tracking this aging of the American Ham Operator. It wasn't an accident that UPS could step in and take away half the 220 Mhz band without much of fight because they already had paid for the politicians in the first place and they knew the fragmentation of the Ham Fraternity especially in regards to the 220 band.

It wouldn't surprise me if they go after part of the 2 meter band next. That portion that is being used for Satellites is just perfect for some big money, smart talking law firm to go after because it is so under utilized by the hams in an area where only a few are interested in satellite communication.

As for what has decimated the ranks of the American Hams... I would point more to incentive licensing than to the stubborn insistance for everyone to learn CW. When the Government, with the backing of the ARRL pulled the HF frequencies away from those of us who were licensed at that time, then told us we could operate on those frequencies again if we 'Upgraded' I said "NO WAY". It was years before I just happened to be at a hamfest when the exams were being offered and decided on the spur of the moment to go for my Advanced License... and passed without one minutes preparation!

If we want to bring more younger people into the hobby we need to make it at least as attractive as the Internet, and IMHO we are a very long way away from doing that.

> conversatiosn. IT's NONE OF YOUR BUSINESS ANYWAY!!!

If you want to ensure privacy get a digital celluar phone and
stay in the cells that support that service. Otherwise you
are simply broadcasting an unencrypted signal over the airways.

Listening to the Police, File, Ambulance, baby monitors,
McDonalds employees, CORDLESS PHONES, and cellular phones is
something that people do. The law has always made revealing
private information illegal. Currently it is only illegal to
listen to an analog cellular phone, not a cordless phone.
Restricting access to scanners and monitors will not greatly
increase your privacy.

Brian

720. YL's on HF and 2-Meters

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-13 00:00:00 UTC
From: jlipchik@umich.edu
Message-ID: <61ttkmdsi2@newbabylon.rs.itd.umich.edu>
Source record: 188786

Hello,

Does anyone have any suggestions on how and where to find YL's on 2-Meters and HF? What states have the most YL's on the air? What about any YL nets?

My definition of a YL is an unmarried female ham operator under the age of 30.

Also, I have always wondered, out of all the high-school and college cheerleaders in the US, if any of them have their ham license. If so, what percent of them do? What state(s) are they most predominant?

Morse code serves a purpose, as does all that technical stuff that gives one the intellectual tools with which to build ones own transmitter from scratch.

First, there is the shear delight in the practice. I know a ham whose main involvement in the hobby was building the absolute minimum transmitter possible and operating CW QRP mobile. Using this extreme minimalist approach, my friend was able to work stations around the world on less than one watt via a straight key strapped to his leg as he drove around town in his car.

Another way of stating this is: why use ham radio at all when you can simply pick up a phone or send email? Why does anyone take up any outmoded technology as a hobby? Sailing, for example, or steam engines.

Second, CW is possibly the minimum amount of modulation with which one can communicate. It doesn't take much imagination to come up with several disaster scenerios where one might be reduced to this form of communication or die.

>None of these
>are needed to assure safe, compliant operation and prevent (or at least
>reduce to a tolerable level) the probability of interference to other,
>more important services.

You're absolutely correct. Given the reliance on store-bought equipment these days, I'd say the typical ham has no idea whether or not they are interfering with another service, or just splattering across the amateur band, unless someone else tells them they have a problem.

I remember a few years ago I was talking on 146.50 simplex with a couple of friends, and started to hear another ham talking (I could only hear him, not the other party.) However, he sounded off-frequency, and I thought perhaps he didn't realize he was interfering with us. I wasn't the only person hearing him either -- a couple of friends nearby who were also in the roundtable could also hear him. After searching a couple of kcs up and down from our frequency, I eventually found him on 146.100, on a repeater input. Turns out he had a problem with his radio, and was splattering all over 146.10 through 146.60. He had no idea until I called him on the phone and told him.

Unless we're going to require hams to periodically inspect their radios for spectral purity, there is no way a ham today will have any idea their radio is causing a problem to another service unless they have someone tell them. And, if we *ARE* going to require this periodic testing, I guess people like Stevenson will be happy, since only him and his 100K-Club RF engineers are going to be able to afford the high-end test equipment necessary to test these rigs.

>The fact that the ability to recite these theories is unnecessary makes
>the imposition of a theory testing "requirement" arbitrary and
>unjustifiable. Sounds familiar, eh?

Absolutely. Your argument is one I've been making for years. The *ONLY* requirement for testing by the FCC is to ensure that you have a working knowledge of the rules and regulations -- what you can and can't do. Anything above and beyond that is, as you call it, simple technical hazing -- forcing me to learn something that I may not necessarily want to learn. And, quite frankly, I don't see why we need the entire VE system. Each time you buy a radio, just have the manufacturer include a copy of Part 97 with it. When you apply for a amateur radio license, just have a application which looks like this:

8< -- Free Amateur License -- 8< -- Clip and Save -- 8<

A F F I D A V I T

I, the undersigned, hereby acknowledge under penalty of law that I have
received a copy of FCC Part 97, have read and understood the same, and
agree to abide by the terms therein.

Does anyone know a way to prevent garbage from being posted on a newsgroup? I am thinking in terms of recent chain letter scams and postings like the recent "long leg girls", etc. kind of garbage. I have found that when I have tried to post a protest to the "author" all my mail has come back as undeliverable due to a fake email address for the poster of this trash. Is there any possible mechanism whereby an item could not be posted unless there was a good address for the poster?

If all of you are so pissed off about somebody gaining the same privliges as you, and not having to learn code then you are selfish. Well you code people, don't feel special. I learned 35 WPM in 2 hours after I started, I guess because I'm a musician. The point is why make CODE (outdated, obsolete) ground for harder tests. Sure hell didn't stop me. Make harder tests!!! Require circuit drawing, eliminate multiple guess, and you will be happy, but don't force crap, I mean code on prospective hams. I know many people who know more about radio, having a life, circuits, and airwave courtesy (rules), than most of you extras. They would make great operators, but are too smart to waste their time with code. These people could pass Extra Test without studying. For those of you who don't follow, why keep excellent operators who don't want code out of HF, and let some fools with extra class baragging rights who don't know squat but simply passed 20 WPM, and some multiple guess on HF. Make sense? NO. My point exactly!!!!

What is holding them back is the Obsolete technology. Code does not take special skills, and training. I learnded 35 WPM in a couple of hours. Didn't take any special skills. So here I am, memorized some multiple guess, and passed 20 WPM, yet I might not have a clue about what the hell a radio does.

Unfortunately, the signal strength seems to fall off by more than the inverse-square-of-the-distance law would seem to indicate for RF. This would be okay if they had some process gain, but apparently SS... oops, confusing acronym, .. SSigs do not seem to have any real gain advantage to speak of .. with an SSig, you need to put in at least as much power as you get out.

I also believe that some of the experiments indicate that SSigs do not seem to refract in the ionosphere but tend to propagate in directions that are not always predictable. For some reason, they seem to be exactly as unpredictable as local weather and wind conditions.

I also note that the speed of propagation seems to be much slower than some of the electromagnetic modes.

:-), of course.

This will be short because everything is available on our web site and to avoid a long download.

##################################
THE RCI FEDERATION ANNOUNCES
##################################

RCI-ROM 1.1
A CD-ROM for RCI 2950, 2970, 2980, 2990, Saturn, Satutn Turbo and similar rigs owners.

All the mods well explained with texts, photos and videos
No a simple listing of Howtoos but a real multimedia product with menus, musics, sounds...

Multimedia part:

Enhanced & re-written user's Manual with un-published tricks
Full Diagram: Main Board + CPU board + Microphone Encyclopedia
Full listing of all the components
Full table of voltage values
Full table of frequencies - channels
Full alignment procedures
Repair tricks, errors, enhancements...
Plenty of mods with photos, videos, voice explanation....
Extreme mods "for transverting to other bands" chapter
A full DX Guide with beaming utilities & programs
A Rci Packet chapter: How to practice Packet with your rig
A complete information on the RCI Federation, the full collection of already published RCI Newsletter...
The RCI BIBLE 3.0 beta (exclusive)
+ Over 1500 mods for other rigs (Ham and CB radios)

Video part

Component section ID
Internal Controls ID
Channel conversion on new 2950, my old one got stolen.
MRF477 intro and removal of 2SC2312's
MRF477 pin reconfiguration.
MRF477's installed and AMC transistor location.
Observing the radios output on a scope and wattmeter.
Introduction of the Heavy swing modification.
Candlewax (just watch it!)
Observing the effects of the swing kit modification on the
Wattmeter and scope.

Disassembly of the radio.

and much, much more.....

The needed computer will be:
486DX2, Pentium, Pentium Pro, or any other compatible
RAM: Minimum 8 Mb - Hard Drive: 20 Mb free on the disk
Video: 800x600 VGA or upper
A CD-ROM reader 4X & a SoundCard
Everything is in English.

Price: $35
- Credit card Visa/Master Card
- Cash
- Mail orders
- Resellers and importers, please contact for other payment protocols.

Date of release: 30 October 1997.
We directly deliver 96 Hours in any country and we are looking for local resellers or importers. Please advise.

There is a beta version available at our web site: http://rciweb.cadic.com (9 Mb in a EXE autodecompressing file).
This CD-ROM is the product of an international collaboration (France - USA - UK)

RCI Federation (R)
ACQ - Box 2887
41028 Blois Cedex
France

Non profit making registered association
All the profit is re-invested in the interest of the community.

Mr. James speaks nonsense. Just because you have a radio doesn't mean
you have to transmit. Most radios have receivers, too, which
indicates that just maybe you could listen part of the time. Of
course, most of our frequencies are completely unused most of the
time, so there's plenty of room for more hams.

If any one portion does get "too crowded" then it's time to move to
another frequency, or to improve techniques so that the spectrum can
accommodate more users. Plus, if we actually had enough hams to
"overcrowd" our bands, that would be an excellent argument for our
getting more frequencies, or at least hanging on to the ones we
already have.

As for the argument that more users equals more abuse, that's nonsense
as well. By that token, we should just abolish the ham bands
altogether, then there'd be no abuse, right?

In the mid-70s, CB sets ran from about $150-200 for a cheapie AM set
to over $500 for a good SSB set. Pretty much equivalent to what 2
meter gear costs today when inflation is factored in.

The constitutional charge for the federal government to "regulate interstate commerce" is the source of legitimacy for the FCC and most other federal regulatory agencies. Many people feel that this clause has been stretched *way* beyond the intent of the founders, but the Supremes have generally gone along with this pretext to grab federal power over aspects of our lives which could, even with the most contorted logic, be deemed to involve crossing state lines. For example, the EPA claims authority over disposal of solid waste because some of that waste may be from products originally produced in another state. That's a stretch for sure.

Since in theory, radio waves extend out to the end of the universe, albeit greatly attenuated, the Feds have used that as a pretext to assume regulatory control of radio under the interstate commerce clause. In fact, it is one of the more reasonable pretexts for grabbing such federal power.

However, Yin, this is exactly the logic no-coders use to justify
elimination of the code test. It is no longer relevant, they say,
because newer technology exists and only a small percentage use
CW on a regular basis.... Well, since almost everyone purchases
commercial gear these days, and very few people are building their
own circuits, the same logic applies to elimination of theory
examinations.

>But hams should

This is a tough analogy to create, but let's use the situation
of a car. You buy a car, and even though it is pre-fab'd to
specific government standards, you are still responsible if it
starts spewing noxious fumes (outside regs) into the air. However,
we do not require a comprehensive examination on the workings of
the internal combustion engine to get a driver's license.

I tend to doubt the "average age" of a ham operator means much to a
commercial interest which is interested in acquiring an amateur band.
All they're concerned about is how much $$$ it is going to cost in
both "fees" to the FCC, and "fees" to each politican's reelection
campaign.

>It wouldn't surprise me if they go after part of the 2 meter band next.

Maybe, but I doubt it. I think 144 and 440mhz are relatively safe from
reallocation, right now. See, there are too many transmitters out there.
If the FCC ever did say "you no longer have 2 meters" to hams, I doubt
hams would stop transmitting. The bands would be so polluted with
bootleggers and jammers that the commercial interests would find the
band next to useless.

How exactly does pissing off current licensees affect the flow of "new
blood" into amateur radio? I don't see a connection myself.

>If we want to bring more younger people into the hobby we need to make
>it at least as attractive as the Internet, and IMHO we are a very long
>way away from doing that.

If that's your definition of what we need to do, then I think we'd just
better roll in the towel now, because its never going to happen. Amateur

radio can never compete with the Internet.

>technology and the like. I say so is RTTY, Packet, AM, SSB and the like.
>If you throw CW out because it is useless and boring than you have no
>reason to leave the other modes in either.

You misunderstand the position of most nocoders. We would
actua;;y agree that CW merits no more (or no less) concern in
testing than the other modes you mention. The problem is,
as I stated before, it is only CW that merits the special, and
totally unique pass/fail separate test element.

>Why should I know the band
>limits, I only want to operate on 20 meters.

Now you are just being silly. Although, I actual agree
that memorizing band limits is of limited value since
they can and o change. I'd much rather have a
frequency chart as part of the test and then have
the test taker show s/he can derive the proper band
limits from the chart.

>Why should I know antenna
>theory, I will pay someone to do my antenna work.

Skip the antenna theory if you want...and you can
still pass the test anyway since the score required on
theory is 75%, you can miss 1/4 of the questions and
I haven't seen antenna theory being 1/4 of the questions.
Remember, there's NO separate pass/fail antenna theory
test element as there is a code test element.

>Why should I care
>about different modulations, their abbreviations and such, I only work
>FM. Why should I have to learn all the formulas and principles to get my
>Advanced Ticket, I just want the extra frequencies to use during
>contests!

Repeat comment as above.

>Why not open it to all like CB?

Very simple, it is only you that raises such a
ridiculous propect. Is that what YOU really want.
It isn't at all what the nocode test advocates want
as we have continually had to restate in the face of this
type of insane argument.

> All the theory test is a
>hazing ritual, most hams would fail the theory test if they had to be
>retested today. Why give a test at all?

Once again it is only the procode advocates that keep
raising this balogna. Not one of the nocode test advocates
believe in lowering theory requirments/testing. In fact,
we'd like to see it made more difficult as already has been
done by increasing the Novice and Tech question pools
by 50% as of 7/1/97.

I am considering buying an Alpha Delta DX-A (160-40 meters) sloper antenna and would like to hear from anyone who has one. How do you like it? Would you buy one again? What don't you like about it? I can mount the feedpoint at 35 feet. Is this high enough for decent reception? Any info will be greatly appreciated.

The theory test is NOT a hazing ritual because it is relevant
to the government's need to assure safe, compliant operation
and prevent (or at least reduce to a tolerable level) the
probability of interference to other, more important services.

Someone not having the ability to copy fast Morse code does
not make them a threat to anybody ... and there is no need to
be able to copy code to understand "go away you are interfering
with our operations" messages from other services, since we really
don't share spectrum with other services (on HF) and virtually none
of the other services use Morse any more anyway.

The fact that the ability to copy Morse is unnecessary makes
the imposition of a Morse testing "requirement" arbitrary and
unjustifiable.

Too many transmitters mean no one can transmit.

Also there are those who abuse it. There will always be. If the
total number is low, it is not severe enough to make the entire
thing useless.

No way. Understanding the theory of transistor gain does nothing for that.
What does knowing Thevenin's Theorem do to achieve the above? Why do I
need to know about Circuit Q, phase angle between voltage and current,
oscilloscope performance, sine wave, sawtooth wave, detectors, transistor
type, emission designators, dynamic range (blocking and IMD),
semiconductor material and monolithic amps to name a few. None of these
are needed to assure safe, compliant operation and prevent (or at least
reduce to a tolerable level) the probability of interference to other,
more important services. To do that you need to prove you can read a
manual and push buttons. Your argument has no merit. It is technical
hazing. It has nothing to do with compliance and safety.
The fact that the ability to recite these theories is unnecessary makes
the imposition of a theory testing "requirement" arbitrary and
unjustifiable. Sounds familiar, eh?

> Someone not having the ability to copy fast Morse code does

Huh, above you said "and prevent (or at least reduce to a tolerable level)
the probability of interference to other, more important services." Which
one is it? This or the above, you can't have both Carl!

> The fact that the ability to copy Morse is unnecessary makes
> the imposition of a Morse testing "requirement" arbitrary and
> unjustifiable.

So should 90% of the theory test then. It is just a hazing ritual. It has
no practical purpose.

I am trying to remember the average price of equipment. I think it was at least
double the $50 stated. There might have been some pieces of equipment
for $50, but I don't recall any except 100 millawatt walkie talkies.
Only untill well after the peak, did prices fall.

762. The CW and Ham Radio Problems Debate

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-13 00:00:00 UTC
From: 1RealHope <davidc@bit-net.com>
Message-ID: <01bcd793$c01b24e0$2f8a92d0@bit-net.bit-net.com>
Source record: 188847

Just another view ...

I hold an Extra Class license, and since I qualified for no exemptions, that meant I had to pass the 20wpm test. A few hours listening to code tapes in the car did it for me.
I have never made a cw contact, doesn't mean I won't, just haven't.

But this is not the issue. If Ham Radio were attractive enough, people would be doing whatever it takes to pass the code, but it is not. In fact, if the license cost $1000. every 10 years, people would pay that in huge numbers as well, it's a question of perceived value.

I believe most people feel that the Ham bands should be like CB, free game for anyone, without restriction. We live in a society where everyone wants everything, they want it now, and they want it with a minimum of effort ... sort of like my 2 year old, I'm afraid.

For those who respect the hobby, the problem of poor behavior is just as commonly found with those who have successfully passed the code and technical tests as with no-coders.

The problem is neither the code, nor the non-code. No code just means that more people will crowd bands that are already surging out of control, perhaps this means more short-term profits for manufacturers, and a delay to the government selling off our frequencies, but it fails to address the quality of the hobby question.

People in and out of ham radio are choosing to be more rude, selfish, and crass - the
problem is not limited to our hobby. Our President tells us that skirting the law for his own personal political profit is ok, ethics and morals are situational, laws are only meaningful if you can't afford the best attorneys and "connections".

We should be so lucky as a society that bad actors are limited to ham radio. No, we
are just seeing one of the many symptoms of a dying society. Sad, but historically true.

Off the soapbox and back to our problem. We are left to behavior modification.
If we cannot find a way to regulate behavior on the bands, the hobby will die anyhow:

1. Other nations will gang up to sell the frequencies to commercial interests and
ignore the US. As they increasingly ignore us in many other places.

2. Serious hams will abandon the hobby, except for the most esoteric niches.
3. The sudden surge of users from no-code will die off as the cb-lunacy transferred to
the ham bands destroys usefulness.
4. Manufacturers will flee or fold and call for the sell-off of the frequencies.

Suggestions:

1. Establish clear and concise rules of conduct.
2. Establish genuine practical enforcement. (FCC w/ ARRL, or whatever)
3. Make the enforcement harsh enough to stop violators. (e.g. stiff fines, equipment
confiscation, license loss, etc. - all that are enforced quickly)
4. Change testing process to require ham sponsor, 1 year good-behavior before
permanent license, first permanent license 5 years, second 10 years, tougher
technical, legal and operating questions.
5. Current hams must get out there and recruit! Show kids and adults how the hobby
works (e.g. in the schools, hold a yard sale and set up your HF rig for people to see
and hear as they pick over the junk on your table and buy enough to allow you to
upgrade that rig and sell them yours!
6. Use the Internet to our advantage! (e.g. set up web pages that broadcast decent
HF and VHF/UHF nets, swap nets, contests, emergency communications, Jamboree-On-The-Air, etc. live (replayed when off the air - the HF stuff should
probably only be done live when a top-of-the line qrm-screening system is in place -
don't want to poison things!)

Well, enough of that ... what do you all think?

I've got 100 of these Motorola Expo HTs - using them to trade for
even the smallest item; this time I need an RS-232 cable with
male plugs on each end. I'll ask you to pay shipping for both
the cable and the HT.

>William R. James

We have over 15,000 hams in the state of NJ and they all
can use the repeaters, etc yet none are operating out of band.
Mr. James fears are ill founded and unsubstantiated by fact.
And, since use of repeaters and phone patches takes place
primarily on the VHF bands where NO code is needed to get
a license, then the fear of overcrowding leading to illegal
operation is totally without merit.

If there is any real evidence of what Mr. James states
regarding overcrowding, then that has NOTHING
to do with code testing. If his claim is true, then the
FCC should be convinced that there needs to be a
limit on the total licenses issued...AFTER which any
new licenses are issued on a waiting list basis as
other licenses expire. Use of a code test to serve
as a barrier to entry just to limit the numbers is a misuse
of the testing procedure.

---------- PRICE REDUCED! ----------

Hello,

I have 2 Hewlett-Packard 331A Audio Distortion Analyzers for sale. They measure total distortion from 0.1% to 100% full scale in 7 ranges, from 5HZ to 600kHz. Harmonics are indicated up to 3MHz. Measures noise as low as 25uV, voltages from 300uV to 300V RMS full scale.

They are both in excellent condition, recently calibrated, 100% operational. They both have option 01, which allows for DC operation from a 26-30VDC source. One has the rack mount brackets, the other does not.

Asking $120.00 each. You pay shipping.

Contact Jack, at parmentier@mindspring.com or call
Home - (919) 387-8109
Work - (919) 472-7814

Bill Nelson is correct, there is NO minimum speed requirement in the
treaty. Even a one wpm knowledge would meet the letter of
the treaty. I used the 5wpm example as it is the lowest test speed
know in use for US licensing.

>close/cut a solder trace or add/remove a diode to open up all freqs or
>some silly mod that they have no idea how it works.

Because this is supposed to be a technical training ground also.
Increasing the question pool doesn't need to mean more theory
is covered, it just means that the volume of possible questions
covering the same subject areas is ore difficult to just memorize.
Interestingly enough, there are procoders (MD, and VINCE) who
believe that the subject areas covered for entry ARE far too simple
and represent literally no effort at all to learn.

David,

What you said is all too true but not just applicable to ham radio. It's a sign of a very sick society. We have policemen (police people) and firemen (fire people) who can't pass the previous prerequisites but have been shoed in by eliminating any prerequisites that might have eliminated them. Wonder what most people would think if they knew their physician was shoed in without passing the necessary criteria? Wanna be a ham without code, then let's let your physician be a doctor by passing a written test and never performing surgery...

774. What people just don't understand about Morse

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-13 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <61tet4loh1@w3eax.umd.edu>
Source record: 188859

If you have never USED Morse Code, you will NEVER understand.

I was driving to meet my parents for dinner. Someone on
40m started calling CQ, and was weak, but I figured I'd
give it a shot anyway (at 3 watts with a mobile antenna).

I proceeded to have a conversation with UR3IDD, Evgeny,
in Donetsk.

Given a crowded band, 3 watts of output power, a thick accent
perceived by each of us, the need for really tight filtering,
and a mobile setup, would any phone-based mode have worked?

Maybe spread spectrum, but it certainly doesn't remove
the accents (remember, to the other guy, my "American"
English is itself an accent) from the equation.

Morse Code is a communications tool. Clean, simple, efficient,
and sent and received by hand, using the most sophisticated
computers available to us - our brains.

Your definition of YL is a little narrow. Most hams would include all
females as YL's although their wife would be known as the XYL. My XYL,
Linda, KF4GKN, has a 2 meter YL net here in Middle Tennessee and you can
visit the WWW's largest YL site (and maybe even find some YL's who meet
your criteria)
at our Stones River Amateur Radio Club page:

Naw, too much fire hazard. Tom-Toms or beating on a hollow log would
be preferable. In clear weather, signaling with mirrors would be
acceptable, I suppose. You'd be required to build your own mirror, of
course.

So, to use your example, if one has proven to be able to safely and competently pilot a single engine propellor aircraft, we should allow them to sit in the cockpit of a multiple-engined jet aircraft. After all, the principles of flight are the same for both aircraft, they both have power plants and flight control surfaces, they both use the same runways at the same airports, they use the same radio frequencies and talk to the same air traffic controllers at the same airports.
The point of the matter is this. Being able to copy code at 13 wpm shows a specific degree of dedication to improving one's skills in this hobby and should be rewarded with a license upgrade. Being able to copy code at 20 wpm shows that the individual has mastered skills and abilities in this hobby and truly deserves to be an Extra class.
Myself, I'm just a Tech Plus, working on the 13 wpm for my General ticket. I figure that if I want that license upgrade enough, then it's going to have to be something that I'm willing to WORK for. Nothing worth having is worth having cheaply. When I'm upgraded to General, it's going to be because I DESERVED it. Same when I move to Advanced and then up to Extra.
Code is NOT hard to learn if you have normal hearing and a reasonable amount of dedication to learning it. Those who cannot learn code are usually those who WILL not learn code. There is a difference. Besides, FCC rules have now been changed to allow one to take a SENDING test instead of a COPYING test. We ALL know that it's easier to send code than it is to copy it, so there's an option for those who just can't "hear" the code. Also, if you can PROVE that you have a medical condition that prevents you from learning the code, you CAN have a waiver applied to that portion of the exam.
All sounds pretty fair to me. The way I see it, the people who are

complaining the loudest about the code test just seem to be too lazy to expend the time and effort it takes to learn the code. It's NOT that difficult, it just takes a little time...

Neither do I ... but I believe that it should be strictly
voluntary ...

> But there does not need to
> be a testing requirement for anything higher than 5 wpm.

There is no NEED for a "requirement" at all (given that the
ITU could be changed, which I think will happen anyway) ...
right now, a 1 word per week exam would meet the treaty requirement.
However, I have said that I would support Yin's proposal for
license/testing reform ... that included a 5 wpm test (or a 12 or
13 wpm test for access to the new Morse Only segments we proposed).

Nope, as I stated in another post. The 23 channel basic CB unit
I bought for my antique car convoy use in 1976 was only $40
on sale. That was when the NEW 40 channel units were being
offered for the first time.

>Maybe somebody could explain to me exactly what's wrong with having
>"thousands of people crowding the spectrum?"

The fact is that the 11-meter band has become the cesspool of the airwaves. The lowest common denominator can be found in that band, and is crude, undisciplined, and ignorant of the rights of others to use not only the same frequency, but those adjacent to the frequency in use. The current ham licensing requirments keep the riff-raff off the airwaves (as much as possible) and keeps the spectrum useful for meaningful communications...

> white and upper middle class.

Where do you get this information? The FCC no longer includes the
date of birth in their license data. BUT when they did, up until about
a year ago, the median age (most often found age) was in the early
40's to late 30's. So most are not over 50. Also since the FCC doesn't
have information about race or income bracket where do you get the
"white, upper middle class" stuff? Sounds like racist remarks to me.
But then since you aren't talking about "minorities" you can't be
racist, right?

> I can safely say that the demographics
> of ham radio in these parts reflects the demographics one would find

So have you ever been to a "Moose" meeting? I think that the only
way you can get into one of those things is to be a member, are
you a member or do you just sit around and watch those who come
and go from the lodge?

>You don't find many people of color or those
> from different ethnic backgrounds at a Moose or Eagles lodge, do you?
> Most of them are white folks from middle america who like beer and

I've found that to be true just about everywhere. Unless you call
a specific person you will probably never get an answer. Although I
have specifically asked for help on many occasions and rarely have my
calls gone unanswered.

<More unsubstantiated BS about ham demographics...>

> Richard Webb, kb0ruu

Now here's some useful advice from a tech -- NOT! (to use the vernacular)
Inner city kids building better HF antennas? We have to teach them
to read and write first! Get them away from midnight basketball and
get them into the school-house! Tell me, how's a kid supposed to
concentrate on his school lessons when he has been out until all
hours of the night playing basketball? I do agree that I would much
rather see them doing something better with their lives than playing
basketball.

If you really believe this, then I invite you to start a No-Theory group as others are active in the No-Code group. If you want such commercial-rig use privileges without having to pass a theory test, that is you are willing to forego all non-type-certified privileges, then see how many hams you can get to go along with that definition. If you get enough people to go along with you to the point that a new license or radio service is created then you were right in your argument. If you don't then you were wrong. That simple. We'll compare notes in 20 years.

Your license limits the power that you may supply to the antenna
transmission line, and that limit is expressed in terms of peak
envelope power. You are not required to own any particular types of
test equipment, but you are required to ensure that you operate
within the terms of your license. You may also find that such a
meter makes transmitter adjustments easier or faster to perform.

But Morse is the ONLY mode with its own pass/fail element. One can
simply ignore all of the questions on, say, RTTY, and still get a
full-privilege HF license ... not so for Morse ... that special status
is NOT deserved by a nearly 150 year old technique that the rest of the
world has abandoned.

> are needed to assure safe, compliant operation and prevent (or at least
> reduce to a tolerable level) the probability of interference to other,
> more important services. To do that you need to prove you can read a
> manual and push buttons.

If all you want to do is be an appliance operator, perhaps ... but
that's "CB" not ham radio ... a ham license allows (encourages, nearly
demands) one to build, tinker, experiment, adjust, design, and generally
fiddle around ... and that requires technical knowledge ...

> Your argument has no merit.

NO, *YOUR* argument has no merit ...

> It is technical hazing.

Since it is demonstrably necessary and reasonable, it is not
hazing ... Morse testing meets neither criteria ...

> It has nothing to do with compliance and safety.

It (theory testing) has EVERYTHING to do with compliance and safety.

> The fact that the ability to recite these theories is unnecessary makes
> the imposition of a theory testing "requirement" arbitrary and
> unjustifiable. Sounds familiar, eh?

But your assertion that theory is "unnecessary" is bogus, thus
your conclusions are likewise bogus ...

>
> Huh, above you said "and prevent (or at least reduce to a tolerable level)

> the probability of interference to other, more important services." Which
> one is it? This or the above, you can't have both Carl!

The goal would be to "prevent" ... however virtually nothing is
100% iron-clad guaranteed ... especially where people are involved.
Thus the "(or at least reduce to a tolerable level)."

> > The fact that the ability to copy Morse is unnecessary makes
> > the imposition of a Morse testing "requirement" arbitrary and
> > unjustifiable.
>
> So should 90% of the theory test then. It is just a hazing ritual. It has

> perceived by each of us, the need for really tight filtering,
> and a mobile setup, would any phone-based mode have worked?

Maybe not, but you (still appear to) ignore the fact
that quite a few more modern digital modes would have
permitted a contact over the same path under the same
conditions with far less power required and 100% reliablity.

> Maybe spread spectrum, but it certainly doesn't remove
> the accents (remember, to the other guy, my "American"
> English is itself an accent) from the equation.

Any text-based mode will "remove the accents" ... Morse is
NOT unique in that regard ...

> Morse Code is a communications tool. Clean, simple, efficient,
> and sent and received by hand, using the most sophisticated
> computers available to us - our brains.

Actually, the fact that digital systems can easily have
100% copy on signals that can't even be detected by ear
exposes the fallacy that the human brain is the best
signal processor available ...

Concerning my recent post concerning this A3SDX antenna, following is
the reply I received from Cushcraft...

Hi Bruce,
Thanks for the e-mail and your continued interest in Cushcraft
products. There is no electrical performance difference between the
A3S and A3SDX. However, the A3SDX is a bit heavier as a result of
splices and extra hardware not found in the A3S. The reason
for the A3SDX is to provide DXpeditions with an antenna that
is packaged in such a way as to allow it to be checked as
airline baggage. This means instead of one long package the
antenna comes in 2 shorter ones.
If you have any more questions please feel free to contact us,

Simple.

We are here to COMMUNICATE.

We rely on nobody but OURSELVES for it - no ISPs, no MCI, no AT&T,
no Sprint, no Dell, Compaq, Sun, or Silicon Graphics.

Morse is the least common denominator, worldwide, in the quest
to communicate with each other. No accents, just characters.

If you don't know Morse, you are thus handicapped as a communicator.

If you don't care, the cellphone is right over there. I hope
it works when you need it to. You're putting your faith in someone
else's hands...

I sincerely hope it doesn't take a serious emergency for this
to get through to certain people.

> in the sand a mile away.
>

When you make statements like that, you need to qualify them a bit. Amateur radio is an international hobby, i.e., the whole world, and what you are telling us about is found only in the worlds largest third world country, the United States Of Drug Dealers.

If you ever find yourself in a situation where you can use an antenna capable of receiving HF signals from more than 300 miles away, you should listen around a bit and you will see what you are referring to is a localized problem.

If you don't like what you hear on the ham bands, don't listen. Go find Radio Moscow or the BBC and let them keep you entertained. If what you hear really bothers you, do something to fix it.

True, but for the price RS is asking you can get much higher quality
from a mail order cable house. Nice that RS has it though for those
last minute FD and Contest emergencys. :)

There are plenty of white males Anglo-Saxon Protestants who are NOT hams, not because they are not interested, but because they don't want it bad enough to be willing to work (learn the code and study the theory) to get the license. However, being white males, THEY do not have the option of pissing and whining and moaning and crying "discrimination". Ergo, not having that option, THEY are being discriminated against, ne c'est pas?

I don't think we know enough about the contact to know if a more robust digital mode would have offered 100% reliability. :-) At a good enough S/N, ANY mode could have 100% reliability . . .

I do not agree with the characterization "far less power," though. Some of the digital modes, encorporating both SS and FEC, can use a few dB less total power under ideal circumstances. In many cases, however, that true gain advantage is not always realizable. (As we both know, the gain advantage in total power due to FEC and the wider transmitted signal. and process gain are NOT the same thing.)

The digital modes do offer some additional gain advantage if you consider fade margins that usually require an HF transmitter to use more power than necessary most of the time to have the power necessary to ensure continued communication during brief deep fades. The spreading (frequency diversity) and FEC (time diversity) help overcome most of the fading. On typical Morse QSOs, however, one simply asks for a manual fill on the faded parts, so the overall power can be as low as needed during peak propagation during a QSO -- the concept I use when I operate +10 dBm in the CW Sweepstakes contest. :-)

>Actually, the fact that digital systems can easily have
>100% copy on signals that can't even be detected by ear
>exposes the fallacy that the human brain is the best
>signal processor available ...

This is not, I am sure, intentionally misleading. However, when one listens with a narrow-band receiver to a portion of an SS digital signal sent in a wide bandwidth, one is listening to only a portion of the transmitted signal, not ALL of the power sent. It would not be surprising that it is cannot be "detected" by ear. If that same signal had been sent using the same total power in the minimum necessary bandwidth for the data rate employed, it would be quite detectable by ear in a receiver of the appropriate necessary bandwidth. If I understand this all correctly, the actual total power advantage to spreading is as much as 1.6 dB, and this is not always realizable in practical systems.

I found that code tapes sending characters at 20+wpm worked best for me. I just put them on in the car and played them until I couldn't stand it any more. Your brain will speed up to capture the sounds and translate them into words and phrases.

Be sure to take the 20wpm test before you try the 13wpm, that will speed your mind up and 13wpm will seem slower, and (like me) you just might pass the 20wpm when you really only expected to pass the 13!

Go for it! DavidC AA1FA

>crossing state lines. For example, the EPA claims authority over disposal
>of solid waste because some of that waste may be from products originally
>produced in another state. That's a stretch for sure.

Using your logic though, the Sherrif in West Virgina would be justified
under local law to grab the property and sell it. Similarly, a factory
can just dump waste into the ground, and poison the drinking water
for 4 states because one state doesn't find that action illegal or worth
investigating. There are times when state regulation hasn't worked,
and radio waves is one good example, with dealing with possibly
toxic waste another good example where most states have failed.
I wonder how many of us would be able to even transmit if most
state legislatures determined amateur privileges?

Funny you mention auto racing. CNN/Impact did a piece on this subject
the other night. Apparently, while many that are directly involved in
racing are men (drivers, crew, etc), an amazingly increasing number of
fans of auto racing are women.

I heard a really good band the other night, they had a killer sax
player...

> 3.8 to 4.0 MHz LSB at night is an open sewer and parts of
> 14.3 MHz and above are not much better,

Really? I worked almost 140 contacts in the PA QSO Party last weekend
and did not hear one foul word, as a matter of fact most said "please
copy". I got some nice comments from Pennsylvania on my signal and had
alot of fun working some of the special event stations. You must be
listening to the WRONG frequencys.

> an all you seem to be
> doing is debating endlessly about a mode of operation which was
> obsolete years ago.

And of course being an SWL you fully understand CW and how it works eh?
Do you know how much bandwidth a CW signal take up? Know what coherent
CW is? I worked another 100 stations on CW in the contest, if it's so
obsolete why are so many still using it?

> Your bands are goin into the toilet with krap which
> is worse than what I hear on the CB and your heads seem to be stuck
> in the sand a mile away.

And exactly what do you think we can do about it? We lobby Washington,
write letters to our representatives. Should we resort to chains around
towers tied to pick up trucks?

> Used to be I'd hear some very good technical and engineering related

Hmmm better check your receivers front end, I have a good friend who is
a BC Engineer and he still meets on 40m.

> You hams better clean up your spectrum, it's not what it used to
> be, and I think the CW issue is NOT the solution, Better technical
> testing is - like what I had to take to gen my FCC Commercial / Radar.

Oh thank you so much, I always enjoy getting advice from someone about amateur radio who isn't an amateur. Exactly who are you talking to when you say 'you hams better clean up your spectrum'? Me? I don't use foul language or jam, do you think your post has much meaning to those who do? Sheeesh...

> Just got ahold of a ham set to listen in on you guys - what a difference
> some years make - unfortunate.

Why do you care? If you have something positive to contribute then why not join the ranks and make it better? If your not interested then why are you telling us how bad it is? Does it make you feel better?

Well, after the 40 channel stuff came out, the price for the older
gear dropped like a rock. Go back about two years to about 1974, and
you'll find that my prices are fairly accurate for most available
gear. Even in 76, I believe, the better 40 channel stuff was still
fairly expensive. I bought my first CB in 1973 or 1974. It was a
Johnson 123A, a fairly simple basic AM set. As I recall, it cost
somewhere around $175. That was a fair amount of money in those days.

I really don't understand the fuss about Morse Code being a requirement on Ham radio. Any moron can learn CW - but it takes a special kind of moron to pass the Technical part of the exam! <G>

I think Hams who found it difficult to get their "ticket" are more apt to appreciate the privelidge of being part of the elite.

Noting worth having doesn't come without some kind of fight. (didn't some singer say that?)

It doesn't take too many feet of RG-8 or RG-58 at 450Mhz to really
degrade your transmission and reception capabilities.

In a car, you only have to go 12-15' so it isn't as bad. If you need
50-100ft (or more) for a base station, you are looking at a relatively
massive loss of power and sensitivity at 450Mhz.

Look for coax like LMR-400 ($0.60Ft) and swear off the cheap stuff...
at those frequencies it can be nothing but a headache!

...snip...

Dear Scott,

Your anecdote was very, very interesting - well said and to the point. Another good posting for the pro Morse side, with which I consider myself to be strongly aligned. Of course, I try also to be objective and give an understanding ear to the other side.

However, Scott, you have missed the point entirely on the Morse issue - NO LOGIC or REASON IS PERMITTED!

Sorry,
Hi,

I am currently out of work and am forced to sell some stuff to pay
bills. Here is my list. All equipment works 100% and is in either
brand new condition or dam close. Prices are firm and you pay shipping.

Radio Shack PRO-62 with brand new NiCad rechargable
batteries, antenna & AC wall charger/adapter. This hand held scanner
receives:
30-50, 118-174, 380-512, 806-823.9875, 849.0125-868.9875, 894.0125-960
this radio has not been modified. It is in excellent condition and has
only been used indoors as a base scanner. 8 months old paid $299+6%
sales tax.
FS: @ $175

Motorola SP-50 Hand Held UHF 2Channel - with 1 battery, antenna & drop
in rapid charger with slow charge option. This radio is in brand new
condition
and is less than 4 months old. It is currently programmed for 2
channels in the 460Mhz band. I paid $389+$49 for the rapid charger.
FS: @ $275

Yaesu FT8500 2M/70CM Mobile w/Deluxe Microphone - Yaesu
programming software, programming cable, Mars/Cap mod, tone decode board

installed, attractive microphone stand, box and all literature.
You don't even want to know what I paid for this (Way too much!)
FS: @ $590

836. HTX-202 opens squelch when beep turned off?

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-14 00:00:00 UTC
From: mcarter@freenet.npiec.on.ca
Message-ID: <6210k9$1sq$1@brain.npiec.on.ca>
Source record: 188721

Hello.

I just purchased an HTX-202 at a hamfest, and I notice that when I turn the keypress beep off(F + Beep), that when I'm in VFO mode and manually keying in a frequency, the squelch opens. When the keypress beep is turned on, this doesn't happen.

Is this a feature I'm misunderstanding, or a bug in the radio?

From: ham@w3eax.umd.edu
Message-ID: <61us00qdo1@w3eax.umd.edu>
Source record: 188722

When Carl's super DSP techno-whizzie digital HF 100,000
kbps transceiver has died,

I'll still pass his emergency traffic, or any traffic
he desires passed.

We are a service. We are here to pass traffic when asked to.

We provide communications, and pride ourselves in doing so.

We enjoy ourselves in between these periods.

In doing so, we make ourselves better operators.

Our mission is to communicate. Lose this ability and
we lose everything.

HF is no big deal. 99% of the ham spectrum is accessible via
the no-code license.

Code? It doesn't keep anyone out of ham radio because they
ARE NOT REQUIRED TO LEARN IT.

It makes ham radio look "archaic?" Most people I know today
don't even know what that word MEANS. Those who do? They
seem to know Morse code, and don't find it archaic.

You don't want to work for HF privileges? Do your mystical
work on 6 meters. There is more bandwidth on 6 meters
than on ALL of the HF bands combined!

(4 MHz vs. 3.75 MHz)

and EVERY Hz of it accessible without ever learning a SINGLE
character of Morse Code.

> WB7DOW @ KB7CFD.ID.USA.NOAM

Well Glenn, I don't have a problem with thousands of new operators *BUT* The whole reason I got into amateur radio was to meet and converse with others who had an interest in radio, electronics, propagation, antennas and the like. The "tech" crowd always moves up, they were on 2m years ago (30 years ago), then when 2 became full of 'yakity yaks' they moved to 440, now 440 rigs are everywhere so the techies have moved to 900MHz and 1.2 GHz. You know the builders, experimenters, RADIO GUYS... If I just wanted to TALK my CB radio worked JUST FINE, I met lots and lots of people there.

I guess I feel HF is the last place where you find the guys who are really interested in radio e.g propagation, antennas etc. If we open it up by making it EASY to get on HF I think were doing a disservice. Most of the new guys I find call themselves 'appliance operators' well, thats fine I'll talk to anyone. They seem to be very content to play radio on 2m and 70cm using the 'yakity yak' local repeaters and have no interest in understanding what the K index is or even where to tune to find it. Those that have an interest learn and move on, those who don't spend an amateur career on 2m. NO PROBLEM.

Im not sure I want to GIVE UP HF that easily. No it's not a 100% filter and no it is not representative of current communcations technology, but it does make one WORK a little harder to enjoy the benifits and Im 100%

for that. Much like getting a College degree, what you learn is rarely applied (engineering is probably an exception) but more a MEASURE OF COMMITMENT.

Tim, ka8ddz

Hello, all.
I need some small, high-voltage relays to switch a a high voltage source between two different sets of outputs. I'm looking for something rated at least 1kV, and the current will be one amp at most. I need a total of four DPDT, or eight SPST, etc.

If anyone has these, or if anyone knows where I can get some surplus units, I would be VERY grateful!

PLEASE E-MAIL ME DIRECTLY AT george_reiswig@ccm.jf.intel.com, since I don't read these newsgroups regularly.

Thanks in advance.

SO? If he likes it fine, but that doesn't mean we all should have
to do it ...

> Another way of stating this is: why use ham radio at all when you can
> simply pick up a phone or send email? Why does anyone take up any outmoded
> technology as a hobby? Sailing, for example, or steam engines.

Some folks (like the BOC racers and the America's Cup teams) are
into extremely high-tech sailing ... others cruise in minimalist
sailing vessels with kerosene-powered navigation lights, no electricity,
and no refrigeration ... neither side tries to force the other to
comply with *their* way ...

> Second, CW is possibly the minimum amount of modulation with which one can
> communicate. It doesn't take much imagination to come up with several
> disaster scenerios where one might be reduced to this form of
> communication or die.

Right ... and the code will save the world when the aliens come
to take over and wipe us all out ... I'm afraid your right in one
(technical) respect, however ... it doesn't take "imagination" to
come up with those sorts of scenarios ... it takes "delusions."

846. Sample contract for partners in repeater ownership?

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-14 00:00:00 UTC
From: john.wagner@pobox.com.anti-spam
Message-ID: <34440659.166627@news-server>
Source record: 188731
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

A few hams in my area (5 of us) have joined together to purchase and maintain a repeater that is already on the air and coordinated.

Does anyone know where I can find a sample contract that these potential repeater owners can sign that will cover everyone's interests? All the potential owners have been friends for years, but I'd hate to see some misunderstanding cause a rift later on. Money has a tendancy to do that.

We want this to be kept as casual as possible. We would rather not form an "official" club, with all the officers, procedures, politics, etc. that go along with it. This is a technical group that wants to just hang out and have fun. I suppose we are looking for something similar to what is used when people go together to buy a timeshare condo.

I would like to address the following issues, and any others that I may have overlooked:
- If someone moves out of the area or wants to give up their interest in the repeater, they can be "bought out" by the others, or someone else can buy into the group in their place.
- Spell out what the partners can and cannot do with the equipment without approval from the others. (move, replace major components, etc)
- How to handle future expenses

Is there a better way to go about this?

Thanks in advance

So what? Most mathematics is older than morse code but it is required in schools. How many of us use algebra on a regular basis? I don't, even though I'm an electronic tech. But, it is extremely useful from time to time. So should we abolish math because it isn't used on a daily basis and because it's "archaic" and because some people either don't want to learn it or are unable to grasp math concepts? The same could be argued in defense of code. (And what about American History? Who uses that knowledge? ;-D)

Morse code requirements are a way of culling out people that aren't "into" it. If someone feels better by calling that an "elitist" practice, I can only guess that that person either hasn't the desire or hasn't the ability to put out the small effort to join the "elite", and thus the amateur community is probably better off without that person.

I can't help but think that the people who want to "open up" Ham bands for use by non-technical folks have some sort of ulterior motive. Like they are trying to mold the service into something else. Like a "free" alternative to commercial radiotelephony services. Or their personaly 2-way communication service.

Amateur Radio is not the only game in town. I say, pay the dues or play a different game.

Yes, well, by far the best caliber for assassination is a .22 anyway,
unless you're talking about long-distance snipering, in which case
you're probably not going to be as concerned with rifle report anyway.

I might hypothesize that the slowing of amateur radio's growth might have to
do with the growth of the Internet. Let's face it, if communication is your
game, the Internet is a cheaper and often more reliable way of
communicating with people in other countries, and with a much wider
bandwidth than is typical of amateur radio communications. There is also
much fewer boundaries and regulations governing the internet, which also
encourages experimentation and development.

As for the diatribe against "cry-baby no-coders", perhaps your attitude is
one of the major contributions to their exodus. But then, of course, that's
precisely why you do it, isn't it?

What's amazing to me, is how one guy targets the cell phone end of the debate and that is what has fueled this round for some time. If you get an overview of the proposal, it is NOT just cell phones, but Police, Fire, Businesses, etc. which will become illegal to monitor.

If you own a mobile, HT or scanner that is capable of receiving these things, it will be illegal....and there is NO grandfathering on this one, if passed as written. The fact is, this could greatly harm the hobby, as many of us work with Police and Fire. Some groups work hand in hand with them.....take the group in Flint, MI for example. So your attacks on those "listening in" or "being nosey" are little more than a cheap shot at some hard working hams.

Wise up gang, we can lose a helluva lot here and I, for one, will not stand by while the parade passes. Write your representatives in Washington and tell them to forget this idea and protect Amateur Radio.

We hams like a challenge! Not to mention that if your phone line gets knocked out hams will still be able to contact someone.

> bandwidth than is typical of amateur radio communications. There is also
> much fewer boundaries and regulations governing the internet, which also

Yeah, and look at all the abusive language & other garbage that's passed over the internet.

> encourages experimentation and development.

If so, it eliminates a large portion of people that complain about CW &, especially, technical tests. They're too lazy or lack the intelligence to engage in such activities. They'd rather be appliance operators.

That's right. I'd rather "hang out" out with a higher class of people.

But, I would argue that the reduced numbers are a result of lack of enforcement. How many parents do you think will let their kids get into ham radio considering some of the unethical & obscene behaviour on the air waves?

IMO, the internet is worse. Friends of mine tell me that they never let their kids get on the internet unless they are present to supervise.

Ah, but that is not what people are saying. What people are saying is that testing Morse code OPERATION does place it in a unique position about the level of testing that is done for all other modes. People aren't interested in getting rid of Morse, but rather only the requirement to demonstrate proficiency as a prerequisite for HF operation.

Hi Max,

Motorola software is available from Motorola for $350 per software package. No one that is sane will give you or sell you a copy. It is dangerous. Motorola enforces software copyright 10 times more aggressively than Microsoft. They have descended on some operations with federal marshals, local police, software engineers, attorneys etc. with a search warrant. Big time bad news. Best to just find a shop to program your unit for a reasonable fee. Good luck.

Unfortunately, there are other factors (environmental, little things
like wars, and so on) which affect society. Growth in radio back in
the 1950's is not surprising -- I know many people from that timeframe
who looked at radio as the past-day equivalent of today's computer
field.

>Thanks only to the growth spurt fostered by the introduction of the
>code test free Tech license, our numbers have nearly doubled again in the
>past 6 years,

Huh? There are nowhere near 300,000 codeless techs. I've seen quoted
numbers at 175,000. Amateur radio did not have 175,000 amateurs back in
1990. More like 500,000. So, the codeless tech is responsible for, at
most, an ~33% growth, not "nearly double".

>Looking at this, it is clear that during periods when there was effectively
>no "incentive" licensing, amateur growth was robust. During periods when

So, what you're saying is that people don't want to earn privileges, they
just want them handed to them. Okay, I'll buy that.

I must echo Ed's comments here. The guys busily posting here are not
on the air at the time, hi hi. If you LOOK for obnoxious hams on
the air on the internet, you WILL find them. They aren't too hard
to avoid, though. Here, you can push your delete key, and on the
air, just turn the dial past the pileups, past the few profanity
laden QSO's, and go call CQ or find a small group that will welcome
you in on a break. Then ask for more than a signal report, and you
are on your way to getting to know those hams who don't mind being
known [for more than a signal report].

You may also note that there is just plain less junk going on down
on CW. If you like that mode at all, go make yourself known and
you'll make plenty of interesting friends.

> licensing was removed.

Where are you getting these numbers? They sure don't track with what I'm seeing when I go check old callbooks. My estimates, by counting entries on a page and multiplying by pages, are that in 1923 there were about 16,500 US hams. In 1932 the number was about 24,000. By 1950, it was about 68,000. Now, these values may be off by 10 or 20% or so because of the quick-and-dirty way I counted them, but there's no question that there was growth throughout the period 1923 to 1953. What makes you think there wasn't?

> During the next 15 years, amateur radio grew 10x to over 160,000.
> When "incentive" licensing was reimposed, that growth essentially
> stopped. From then until 1991, amateur radio growth was only 2.6x
> for the 23 year period (and even that increase is misleading as noted
> below).

Actually, there were 292,000 US hams in 1968, but the base being close to 70,000 rather than 16,000 casts an entirely different light on the growth rate. It was a pretty impressive growth rate, nonetheless. But consider that during this period there were, in no particular order: 1) many military-trained radio operators exiting the service and getting ham licenses, 2) a nationwide post-Sputnik glamorization of science and technology, 3) a baby boom, and 4) military surplus equipment flooding the market, making it easier to get on the air cheaply. I suggest some of those factors were probably more important than the licensing structure.

> Looking at this, it is clear that during periods when there was effectively
> no "incentive" licensing, amateur growth was robust. During periods when
> "incentive" licensing was imposed, growth nearly stagnated, or amateur
> numbers actually declined.

Nope. The numbers don't support that. Even if they did, you've failed to show any consideration of other factors. You'e made the classic error of confusing correlation with causation, made ridiculous in this case

because you're even lacking correlation!

There are good reasons to question the current license structure. Growth rates aren't among them.

You seem to have the impression that "modern digital modes that would
outperform OOK Morse" INHERENTLY requires the use of a conventional
keyboard ... that is not the case ... FSK/MSK/PSK can be keyed by hand
and copied by machine or ear at higher spectral efficiencies than can
OOK AM ... and uniform codes such as Baudot or ASCII could be copied
by ear as well ... as long as the operator is willing to slowww wayyyy
dowwwwn to the transfer rates associated with OOK Morse ...

To paraphrase from you, "Come back when you learn to 'read'. Or are you
just ignoring the fact that the better methods exist, despite your obvious
prejudices?"

Why not? We've just agreed that those with no interest will not move
to HF. So it follows that anyone who does go to HF because of "easier
access" will do it because they ARE interested, and once they get
there, they'll be able to learn some of that stuff that you're willing
to teach them.

There's nothing new about this. Twenty years ago I was heavily
involved in working ten meters, and most of the Old Timers who came up
to the band had little or no idea of things like Sporadic E,
Backscatter, or Aurora scatter. Many of these folks were Extra Class.
CW didn't teach them one damn thing about how radio works.

>Absolutly, and this is certainly the crux of our discussion, but since
>we've made getting an extra no harder than memorizing a list of
>questions and answers, learning CW at 20wpm is all thats left to make

Well, then, let's make them REALLY earn it, and require 30 or 40 WPM,
and retest them every year, so they'll be able to demonstrate that
they've "paid their dues?"

>truly requires one to understand the theory and not just memorize

Lids are everywhere, and ability to copy CW has no correlation with
Lid-dom. Some of the worst offenders on the bands are Extra Class
hams.

>In a nut shell, the no-code license was supposed to attract all these RF

>no-code has attracted is those who do not really have any interest in
>radio or electronics but got their licences because it's so easy to do
>now.

It turns out that pitch was nonsense. Anyone with a real desire to
become a ham can easily learn enough code to get a tech ticket, at
least.

>What are your thoughts?

Times are changing. We hams must accept this, or we'll be left with
few hams and few frequencies to play on. Like it or not, we need more

hams if we are going to keep the hobby alive into the next century.

As far as I'm concerned, moving ham radio in the direction of a Personal Radio Service is not a bad thing, so long as those of us who wish to experiment are allowed to do so, and those of us who just want to talk about anything and nothing are allowed to do so.

The only real difference between ham radio and most commercial radio services is that we can talk about personal stuff, and we can experiment and build. All that can co-exist very well with a PRS that allows family members to keep in touch at the mall, and allows you to make an occasional phone call to Pizza Hut. In fact, we pretty much have that already.

CW *will* be dropped as a requirement eventually. On that you can bet the mortgage. If it doesn't happen sooner, it'll happen when ham radio has died, and so there'll be no need for *any* test. The sooner this CW nonsense goes away, the sooner hams can quit arguing about it, and get down to addressing the REAL problems of the hobby, which have nothing at all to do with testing methods and procedures.

870. Re: GTE Phones on the planes

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-15 00:00:00 UTC
From: The Bakers <mbaker@monmouth.com>
Message-ID: <34456734.D775CDFB@monmouth.com>
Source record: 188581

Hey, here's a thought for the newsgroup ----

Since the airphone market is pretty well sewn up, and Amtrak trains already have phones in many of the passenger cars (Railfone, I think is the name of the service), and cruise ships have Inmarsat terminals for placing phone calls ---- there's only one place left to make some money:

That's right: CW QRP rigs on Greyhound & Trailways buses !!!

Just insert your credit card, and a little straight key and pair of headphones flips down from the back of the seat in front of you. Complimentary scratch paper and pencils from the driver for copying the messages. And a trailing wire antenna which unfurls from the bus's exhaust pipe. Maybe we could get the bus companies to include the NTS Net Schedules on their printed timetables.......

After all, CW is the mode that gets through in conditions while mere AM, FM, and SSB turn tail and run.....perfect for the ignition noise filled mobile environment (yes, I know the big buses have diesel engines, but there's lots of other spark plugs firing in the surrounding traffic).

What do you think ??

M. Baker
mbaker@monmouth.com

P.S. -- If you get rich off this idea, remember who came up with it.

Yes, MTBF is just soooo accurate. I can't count the number of
SCSI drives from different manufacturers, all with mega-MTBF
hour counts, that I've had to return for various defects.

Oh, come on! While I may agree with the overall concept you state, the
above excuse for silencers is pretty lame. They not only shorten range of the
projectile, but are detrimental to the accuracy too. And while neighbors may
be happy not to hear the shots of drive by shooters, they might want to know
when they occur so as to check on the kids. (We've had a number of kids
killed in their own homes this past year in California by drive-by shootings.

A NEW MAXIMUM USABLE FREQUENCY PREDICTIONS DATABASE is now available for
October and November 1997.

This database provides predicted maximum usable frequencies for
ionospherically communicated radio signals between about 50 different locations
world-wide. Results are based upon extensive ray-tracings through a realistic
ionosphere and take into consideration the current rapid ascension phase of the
solar cycle and predicted levels of geomagnetic activity.

Many locations should support communications in the lower VHF bands.

Go to: http://solar.uleth.ca/solar
and click on the "*NEW* MUF Predictions" menu option for complete details.
This database is updated every month or two, according to changing conditions.

>operating your equipment properly.

But that's the rub, knowing when your equipment is operating properly,
and more importantly, knowing when it is not. That's where technical
knowledge is required. If you don't understand how it is supposed to
work, how can you know when it is operating improperly?

>The same requirements stand for CB
>and personal radio services.

Those services require the use of Type Accepted equipment, IE equipment
that has been manufactured to the best of the manufacturer's ability to be
idiot proof. Amateur equipment isn't Type Accepted, and isn't designed to be
operated by idiots, because the testing was supposed to eliminate them. And
the purpose of amateur radio is learning about and experimenting with radio
technology. If you don't want to know that stuff, then you should look into
CB or some other non-technical radio service rather than trying to convince
us that amateur radio should be a personal radio service for telegraphers
who are clueless about how the click-clacks of their keys get transformed
into the beep beeps in the receiver of the fellow on the other end.

>The theory tests don't prove anything other
>than you can memorize a Gordon West book before you take the test.

With the expanded question pools, that's now over a thousand questions.
I'm sure there are some people who can memorize that much material
without understanding any of it, at least that's what those who advocate

memorizing Morse say. I've heard of people who can memorize a phone
book too. Seems something of a freak talent to me, but no doubt there
are freaks who have it. It seems to me much easier to simply understand
the principles on which the technical questions are based.

> If you
>want to be realistic about it, most people do not have the equipment to
>work on today's highly integrated push button surface mount constructed
>rigs. In reality your technical standards are out dated and old
>fashioned.

Sounds more like your technical skills are outdated and old fashioned.
It is much easier to troubleshoot and repair modern equipment than
it was to troubleshoot and repair old discrete stuff of similar functionality.
SMT is an easy technology to master, easier than thru-hole, and infinitely
easier than tiepoint methods of construction. And troubleshooting need
not go below the functional level since entire functions are now encapsulated
in one component. But you *do* have to understand how the equipment
is supposed to function on a level more complex than tapping on a switch.

Yes, I definatly agree about the pioneering new bands/modes part. I guess the point was that those on 2m now, the NEW guys (the majority, there are always exceptions) have no interest in talking RADIO and as soon as the conversation goes in that direction they split, or simply say "I dont know anything about that" and NEVER engage with a question. Hey I chit chat just like the rest, but when it's ALL you can do to chit chat why did you bother with amateur radio?

And yes, 220 is open in many areas and the thats where alot of the techies have gone, why? because 220 HT's are not popular so everone and their brother isn't up there.

Well no one had to give me 'free access' to get me interested, how about you Glen? With a WB call I'd say you're about 10 years? my senior with respect to amateur radio. I could see what HF SSB was all about when I attended FD and other events. That was enough for me to say 'hey, I need to increase my code speed and study the next exam'.

> >of the new guys I find call themselves 'appliance operators' well, thats

> intriguing facts, wouldn't you say?

Like many who enjoy this hobby I love to teach. My point is that this many of the new hams simply does not have any interest, and thats JUST FINE. Just don't expect free access to HF unless you pay the dues. They don't ask or engage you in discussions about how to build a stable VFO, what NP0 caps are, etc. They are just not interested. When I first got

on 2m years ago I was all over these guys wanting to know what the hec an I.F was etc. Don't get me wrong, you don't have to be a radio engineer to enjoy the hobby, but if you have no interest in learning about radio why did you get the license? You can meet lots of people on CB and be an appliance operator all day long.

> >Those that have an interest learn and move on, those who don't spend an

> Exactly.

Well, OK, so then if they are content with THIS, then why make HF acess easier?

> >Im not sure I want to GIVE UP HF that easily. No it's not a 100% filter

> can handle that, right? A "real" ham does not fear innovation.

Oh please, I welcome new ideas and technology. I don't fear much at all with respect to ham radio. But what I don't want to see happen is when I'm working a KC5 out of Arizona on 15m and say 'hey Im on europe, are we long path?" get a response like, uh hey Im just an applicance operator I dont know anything about that propagation stuff...
Not knowing is one thing, not having any interest is another.

> >and no it is not representative of current communcations technology, but

> >COMMITMENT.
>
> If such a "gateway" device is needed, then there are things much
> better suited for such a purpose than a CW test.

Absolutly, and this is certainly the crux of our discussion, but since we've made getting an extra no harder than memorizing a list of questions and answers, learning CW at 20wpm is all thats left to make someone EARN HF priviliges. Untill the tests are given in a mannor that truly requires one to understand the theory and not just memorize answers I'll not support a no-code HF. I don't share the belief that we need to grow our numbers to survive, if the hobby is going to die I'd rather see it die with dignity than to turn into a citizens band free for all where anyone can use it. Yes there are some of these already on the air, but lets be thankful they keep themselves to one freq.

If this were to change so that someone with an extra class license really knows how to find the resonant frequency of a tuned circuit, I have no problem with no-code HF access. But as I stated before, for now it's all thats left. Yes I may an 'elitist' but this is why we have

country clubs with private memberships, if you want to join then come up to OUR level not the othe way around. If you want to wear jeans to play golf, do it at the public club they are not permitted here.

In a nut shell, the no-code license was supposed to attract all these RF Engineers, Electronics Specialits etc, who would in turn bring great richness to our beloved hobby but never got their licenses because of the lack of interest in code. How long have we had no-code now 10 years or so? Where are all these guys? All these microwave engineers and radar specialists who we were going to attract to our hobby by getting rid of the code? It would appear to me as a casual observer that all the no-code has attracted is those who do not really have any interest in radio or electronics but got their licences because it's so easy to do now.

What are your thoughts?

Tim

Well, one could certainly carry on a 20 wpm CW QSO using a decoder and keyboard. You would not actually have to know code to accomplish this in the CW segment.

:)

On Mon, 06 Oct 1997 10:51:41 -0600, K0HB@JUNO.COM wrote:
[history of amateur licensing snipped]

Now we need to look at some demographics. From the time Marconi received a signal across the Atlantic until 1923 when "incentive" licensing was first imposed, some 60,000 Americans were counted as radio amateurs, many licensed only by certification. By 1932, that number had dropped to about 16,000. And it *stayed* near 16,000 until 1953 when "incentive" licensing was removed.

During the next 15 years, amateur radio grew 10x to over 160,000. When "incentive" licensing was reimposed, that growth essentially stopped. From then until 1991, amateur radio growth was only 2.6x for the 23 year period (and even that increase is misleading as noted below).

Thanks only to the growth spurt fostered by the introduction of the code test free Tech license, our numbers have nearly doubled again in the past 6 years, but that rate of growth has now turned negative, with the September license numbers showing an actual decline in total amateur numbers for the first time since 1973 (when the last of the licenses of pre-incentive licensing amateurs expired). The present negative growth reflects the purging from the FCC database of the first of the 10 year licenses, which provided a false sense of health to our numbers during the 1980s and early 1990s (and inflated that 2.6x growth which might otherwise have been much lower).

Looking at this, it is clear that during periods when there was effectively no "incentive" licensing, amateur growth was robust. During periods when "incentive" licensing was imposed, growth nearly stagnated, or amateur numbers actually declined. It is instructive to note what "incentive" licensing *incentized* in the past and in the present. Primarily, that is the passage of progressively faster Morse speed tests for privileges which are primarily non-Morse related. That seems a non sequitor today, and apparently did in the past also.

It is also interesting to note that the growth spurts paralleled the introduction of new technologies to amateur radio. At the turn of the century, it was radio itself which was the new exciting technology which drew the public to amateur radio. In the teens and early 20s, it was the introduction of AM voice (and according to _200 Meters and Down_ it was this increased interest in AM voice which caused the ARRL to lobby for "incentive" licensing and higher Morse test speeds to ration *phone* activity, which was threatening to displace traditional Morse operation). In the 50s and 60s it was the introduction of SSB and FM repeaters (and again the ARRL responded by lobbying

to raise Morse test speeds in order to limit this non-Morse activity).

In the 80s and 90s, the hot new technology is digital operation, but due to the continued presence of "incentive" licensing, that hasn't led to the sort of surge in public interest in amateur radio that previous new technologies created (but it can be argued that it at least prevented for a while negative growth in amateur radio during this latest episode of "incentive" licensing).

According to industry figures, some 240,000 TNCs or other types of data controllers have been sold to amateurs. (Note, because many amateurs active in digital operations have bought more than one unit, this number isn't exactly indicative of the number of digital operators, who, according to ARRL figures, represent 22% of the current amateur population.) I would submit, absent "incentive" licensing, that number would have been much higher. But that window of opportunity has essentially closed now due to the maturing of the internet, which has created the mass market necessary to support high speed networks that amateur radio, burdened by "incentive" licensing, didn't.

>a year ago, the median age (most often found age) was in the early
>40's to late 30's. So most are not over 50.

That's interesting. The average age of all amateurs, as of the last
released data, was 52 (down from 59 in 1990), with the youngest
(and largest) subgroup, the Techs, coming in at 43, and the oldest,
the Generals, averaging 62. Now if you're saying the median age is
lower than 50, then that implies that we must have a large number
of octogenarian amateurs to counterbalance the more numerous
young amateurs, and a relative scarcity in the middle age group to
make the totals come out right.

But that doesn't match with experience. Look around at any hamfest
and see for yourself. Middle aged white male amateurs dominate, with
a good percentage of senior citizens, and very few young people. I'd
contend that the people attending hamfests are a representative cross
section of US amateur radio. Practically every amateur you meet on the
air has gone to, or is going to, one or more hamfests each year.

>Also since the FCC doesn't
>have information about race or income bracket where do you get the
>"white, upper middle class" stuff? Sounds like racist remarks to me.
>But then since you aren't talking about "minorities" you can't be
>racist, right?

You don't need access to the FCC database to reach the conclusion
that amateurs are largely white and middle class. Again, go to any
hamfest and look around. You see mainly middle aged white males,
some dragging along wives and kids who largely aren't amateurs.
You do not see 51% of the crowd being female, nor is 20% of it
black. Nor do you see many poor people (though from the way most
amateurs dress this could be in doubt). Nor, judging from the parking
lot, are there many of the rich (a small minority for sure) present, IE
you'd expect the rich to drive a better car than the beaters the average
amateur seems to own.

>
>That's just as stupid as saying that all black basketball players
>sit around and listen to Mo-Town and rap music on their boom-boxes.

But a large percentage of them *do*. It isn't stereotyping to recognize
that certain groups tend to have large portions of their memberships
sharing certain cultural values. It is only stereotyping when you try
to apply that image to particular individuals from that group without
knowing whether they follow the same tastes as a large number of
their fellows do. If you visit a hockey team's locker room, it will
be very good odds that few of them will be black, and that many
of them will end their sentences with, "eh?"

Let's just be honest with ourselves! Ham radio is one of the dorkier pursuits around. It's way cool for us, it's fun, it's challenging, it's satisfying, but it's not "hip."

Neither is C programming. How 'bout those guys who send up homebrew weather balloons. Rock collectors? Chemists?

None of these jobs/hobbies will help you attain the universal admiration of the masses, or the affection of a fine specimen of whichever gender you prefer. Any pursuit that involves many hours inside dark rooms playing with esoteric gadgetry is not viewed as "Sexy" by the world at large. Hmmm... I guess that depends on what kind of gadgetry we're talking about...

I personally enjoy the pictures in the Mobile Operator's Handbook (exact title?) that show absurdly cantankerous antenna setups. One is a tribander on top of a car. Another is a tower with HF beams attached to the back of a van. If the people that put these together aren't geeks, then I don't know what a geek is! Or perhaps it's me at 2:00 AM (whoops, I mean Oh-Six-hundred Zulu) trying to debug my TCP/IP code while straining to hear that Fox-Radio-5 station in Reunion and periodically sending my callsign in <NOT!> Morse Code.

Greetings,
Most anyone of a non-ham background, reading this newsgroup would have a very poor perception of hams in general. Really too bad, that probably ok people in person, have such terrible keyboard personas'. Probably similar to what is now being called 'road rage'. I seem to remember a Disney cartoon, from the 50's, starring Goofy - in a Dr. Jekkell/Mr. Hyde driving story that was right on what is the same today.
I know it is too much to hope that all of this bandwidth waste will stop. Probably best for me not to worry anymore, and give up trying to change intractable minds in this community. Have been getting 95% on the written test and can now copy about 25wpm consistantly - was gonna get the Extra back. Listened on 20m, too strange for me.
Regards,
Michael Lowe
used to be a ham, and was proud of

Even if it's no longer an international requirement, it could still be a
requirement here in the U.S. since a majority of U.S. hams support the
code testing.

I don't understand this mentality at all.

First of all, I don't understand why anyone should have to demonstrate
"dedication" to a hobby. I don't understand why some arbitrary distiction
of "achievement" should grant people special priveleges. I am sorry, I just
don't get it.

Being able to copy code at 20wpm demonstrates one thing, and one thing only:
the ability to copy code at 20wpm. It's an achievement, sure, just like
riding a bicycle is an achievement and getting to work on time is an
achievement. I think that drawing any conclusions about the technical
competency or dedication of such an individual is quite a stretch...

Ham radio has been a hobby for most of this century for people
world wide. Investment in terms of money, time and intelligent radio
development infinitely exceeds those of citizens band which is only a
very basic short range communications facility. The difference between
the two Radio Services defies comparison.
Because of the international nature of Ham Radio, it was
necessary for the ITU to develop international regulations for this
Service, which enjoys many international allocations across the RF
spectrum. If it became unregulated, it would become chaotic. It is
necessary to licence the amateurs in order to maintain an orderly use of
these pieces of allocated spectrum. Don't get caght up in whether or not
amateurs should be licensed, be concerned about the regulations
pertaining to licensing which is done world-wide by individual national
administrations.

The most often found age is not the median but the mode, and the
value of the mode no indication of the distribution; it is more
likely to be the artifact of a baby boom. The median is the mid-
point in a ranked distribution and so it is somewhat descriptive.

SHEESH!!!!

I was going to upgrade my license from novice to tech plus, but after looking at this newsgroup I am having second thoughts. I got my novice ticket over 10 years ago (renewed now) but never did anything with it. equipment too expensive, and after going to a couple of local ham club meetings with a friend of mine, all I saw at the meetings is a bunch of old farts arguing about stuff. According to all the books and articles I have read the ham community is supposed to be a FRIENDLY place. this newsgroup is NOT representitive of that at all!!!. I never have done a lot of listening on the ham bands. But, if they fight like this on the air, I want no part of it!!! I'll save my money for a new computer or some decent home theater system. that way I can choose when I want to hear a fight!!!

Most of the no-coders that I have met buy the cheapest handheld. And the only thing they do is use the 2 meter repeaters to call their wife & kids. Other than that, you don't hear from them. If that's all they want to do, then why make it easier for them to get on HF? These people are labeled "personal communicators". So, of what value is HF to them?

It's become commonplace for people to get what they want without working for it. It happens in our school systems so it's not suprising that adults expect the same.

I'm an electronic technician that had the same negative attitude about code. After 20 years I came into ham radio as a no-code. But, I have since upgraded to Advanced class. I am shocked at the lack of technical knowledge of a lot of Extra's. I thought that ham radio is a technical hobby. But, I don't expect a hobbyist to have the technical knowledge or expertise that I possess.

I thought it interesting to note the dress code for country clubs. It got me to thinking about etiquette & how it's commonplace for someone to wear a hat to a dinner table at a "fine" restaurant, now. I was taught that is bad manners. I could go on about this subject. But, it supports my belief that people just want to do whatever they want.

Godfrey:

Kits are getting harder to find all the time. One of the best companies I know of is: Ten-Tec, Inc. 1185 Dolly Parton Pky, Sevierville, TN 37862-3710. Call 1-800-833-7373 and ask for kit catalog. They have at least two SW receiver kits.

Good Luck.

Irv.

Morse Code can be (and is, in some cases) both sent and received by
machine. A Technician licensee who does not have the HF endoresement is
perfectly free to use Morse Code in the two VHF Morse-only segments.

> advantage?

In my opinion, you don't need one for two reasons:

a) the peak reading wattmeters are notoriously inaccurate. An
oscilloscope is reasonably accurate for reading peak envelope power.

b) If you tune up your rig on CW, that's going to be your MAXIMUM peak
envelope power in SSB mode. If you want to know what it is during
normal speech - guess at it. About twice the value seen on an average
reading wattmeter will be close enough for government work but who
cares? The ALC metering on your rig will be a good indicator of when
the microphone level is adjusted correctly.

Is amateur radio supposed to be the "morse code service"?

Your guesses are rather bigoted assumptions. You, like many others, assume that anyone supporting the elimination of code testing is lazy or stupid yet you have no way to prove that - because its not the case.

How is amateur radio better off without someone that is not interested in code? In know many hams that took and passed code tests that are not the least bit interested in it. I know a few extras that haven't used a key since they upgraded. I know a number of advanced and generals that are not interested in CW and don't use it. They are "not into" it amateur radio would be better off without them?

> I can't help but think that the people who want to "open up" Ham bands for
> use by non-technical folks have some sort of ulterior motive. Like they
> are trying to mold the service into something else. Like a "free"
> alternative to commercial radiotelephony services. Or their personaly
> 2-way communication service.

Are you saying that code proficiency is a measure of technical knowledge? One of the cries I have from code supporters is that "anyone can learn code!" But then in the same breath they say they don't want "just ANYONE" getting on the ham bands.

> Amateur Radio is not the only game in town. I say, pay the dues or play a
> different game.

Pay your dues? Oh I see. So you acknowledge that the code test is a ritual hazing of some kind? A rite of passage?

> I sincerly apologize for the fake address; I can no longer take
> time to deal with the high volume of unsolicited bulk email.
> Please, no lectures.

Will you also aplogize to the readers of rec.boats.electronics, rec.video.satellite.tvro, and the scanner newsgroups for keeping this thread alive in those unrelated newsgroups? Not a lecture, just a question. I subscribe to rec.boats.electronics - but not to see hams argue over code.

Why should someone who will never, ever work CW have to learn Morse?

>I understand that it takes time and
>isn't easy but the FCC has built the Amateur testing in a incentive
>program. The faster you learn the code the more places you can go.
>The more things you can do.

But why should code be the deciding factor in having more privileges that, for the most part, do not involve CW at all? You are accepting the Morse requirement as status quo. I question the validity of requiring it at all.

It's like corporate dress codes. Wearing a suit and tie is inconvenient, uncomfortable, and has nothing whatsoever to do with the value or talent of an individual. Yet, it is the required "uniform" for most well-paying jobs. People should be able to wear what they want, what they feel most comfortable in -- they would be happier, more productive employees. Yet, it is the "powers that be" and the "status quo'ers" (the ones who say "well, that's just the way it is -- if you don't wanna wear a suit, be a damn ditch-digger or sumpthin'") who keep this facetious mentality alive. "I had to wear a suit every day for 30 years -- why should YOU be allowed to work in comfort?" Doesn't that sound a lot like "I had to learn code to ultimately become Extra Class -- why should YOU be able to work those frequencies without it?" The world would be a better place if people lost their hang-ups about "the way things are," took a more critical look at the premises behind our societal conventions, and did away with what is irrelevant or outdated.

>The code is one of the aspects tested by
>the FCC to assure a most basic of radio knowledge.

Radio knowledge should have nothing to do with learning an operating mode one will never use, or for that matter (to use another example) having any knowledge about constructing or repairing equipment. Such knowledge was paramount 50 years ago, but now there is all the "off-the-shelf" equipment one needs, and design, construction, and repairs are best left to the pros. Radio should be about COMMUNICATING, pure and simple. I couldn't care less about what goes on inside the "box" -- I'm only interested in using the box to communicate.

>Amateur radio is a
>hobby.....most people enjoy their hobbies and attempt to learn as much

>as there is to be offered from it.

I happen to be a musician, with my particular area of specialty being Baroque and Classical music. I would be incensed if, in order to join a musician's union, I was required to have intricate knowledge of jazz, country, rap, or heavy metal, when I have no intention of ever performing in those styles. My lack of knowledge in those genres does not diminish the pleasure I derive from music one whit, nor does it make me any less of an artist.

>I enjoy learning it and hope to increase my speed each day.

Good for you!! However, *I* don't. And my ability to operate efficiently and professionally in voice, packet, ATV, or any other mode is not enhanced by knowledge of a mode that most other radio services have all but abandoned. Ham Radio is slowly dying -- that death will come quickly if hams do not change with the times and prepare for the 21st Century.

Perhaps true, but irrelevent.
As you stated yourself, the cheap price was for an "outdated" (at least with respect to the fad) model. Had you looked at your same 23-channel when the faddish people still wanted them, you'd have found them closer to $150. The only reason it was marked down was to clear it off the shelf for models the retailer thought they could sell for more profit.
And that's not in constant dollars. In 1997 dollars, that unit would be pretty expensive.

>hear a fight!!!

Robert,

I sometimes think that club meetings and usenet tend to both bring out the worst in folks AND tend to bring out the folks who are willing to argue with other folks in a public forum. In some of the club-meeting "discussions" I have seen, it has been a small handful of folks arguing while the much larger set of folks sat around and wondered why the first set was making that much of a fuss. The same applies here; the folks who tend to post a lot are among the more opinionated; there is a much larger group who are not nearly as opinionated. I will balance that with the fact that I have learned a LOT from my participation here and have managed to avoid most of the pitfalls and unpleasantries.

I can't say that I have never had an unpleasant QSO on the air, but they have been far and few between. Just stay away from some of the strong opinions on 75 meters, the strong opinions on frequencies like 14.313 and big DX pileups and you will probably ultimately meet some real nice people.

Hamming doesn't have to be expensive btw. Used gear can be had for a few hundred dollars for fairly recent vintage equipment. There are a slew of inexpensive kits and homebrew projects and older equipment, for those who like it "hollow state" can often be had for free from an old timer.

<61us00qdo1@w3eax.umd.edu>...
> When Carl's super DSP techno-whizzie digital HF 100,000
> kbps transceiver has died,

You should live so long ... with proper planning, including
redundant systems, any well-designed modern system can
have a *system* MTBF (mean time between failures) that well
exceeds your life expectancy ... (that is, pieces may fail
individually, but the likelihood of a total system outage
is far, far lower ...)

> I'll still pass his emergency traffic, or any traffic
> he desires passed.

Thanks for the offer, but I'm confident I will not require
your services ...

> We are a service. We are here to pass traffic when asked to.

That's exactly WHY we need to modernize and catch up with
the capabilities that our potential "customers" (the emergency
services folks) want and need ... every EMS manager that I
have known in the past decade (including state-level officials
in CAL-OES ... the Governor's office of emergency services)
would laugh you out of their office if you walked in and asserted
that a corps of Morse operators would be of *any* real use to him
in a major disaster ...

> We provide communications, and pride ourselves in doing so.

Try moving up to something that's more *worthy* of that pride,
otherwise it's just so much "feel-good" self aggrandizement ...

> We enjoy ourselves in between these periods.

Nothing wrong with that...

> In doing so, we make ourselves better operators.

There is little *real* value in being "expert" in something
nobody *wants* ...

> Our mission is to communicate. Lose this ability and
> we lose everything.

Again, if mission reliability is the goal, you can do far
better than the minimalist approach of Morse and do far

more of it, as well (in terms of ability to handle volume
traffic).

> HF is no big deal. 99% of the ham spectrum is accessible via
> the no-code license.

Yes, but it doesn't support ionospheric propagation ... that's
a MAJOR limiter ...

> Code? It doesn't keep anyone out of ham radio because they
> ARE NOT REQUIRED TO LEARN IT.

OK ... it just keeps them out of what is almost universally
regarded as "the best bands."

> It makes ham radio look "archaic?" Most people I know today
> don't even know what that word MEANS. Those who do? They
> seem to know Morse code, and don't find it archaic.

Those who don't know the meaning of the word archaic are likely
not bright enough to realize that the Morse Myths are a pile of
dung. (frankly, your chanting of those mantra is beginning to
make me wonder about you ...) Of the remainder of the population,
(those bright enough to know what "archaic" means) statistics
would indicate that only 27% OR LESS of them EVER use Morse.

> You don't want to work for HF privileges? Do your mystical
> work on 6 meters. There is more bandwidth on 6 meters
> than on ALL of the HF bands combined!
>
> (4 MHz vs. 3.75 MHz)
>
> and EVERY Hz of it accessible without ever learning a SINGLE
> character of Morse Code.

The MUF does not get high enough often enough to support a
serious research program in that band ... and even when it
does, the channel impairments are still quite different than
on, say, 1.8, 3.5, or 7 MHz ...

In short, Scott ... all of your "excuses" FOR Morse may
seem plausible, even credible, to the ill-informed, but
in the true light of day, they don't stand up ...

In what bandwidth? The bandwidth needed to support the digital data rate,
or the one needed to support the cw data rate?

This exposes the fallacy that the digital signal is being copied below the
noise by listening to the speaker, when in fact, there is further
processing taking place after the speaker and ahead of the detector to
create a positive signal to noise ratio - such as individual mark/space
filters.

Where the *hell* did you get the idea that that's what we
(those opposed to Morse "requirements") want??? Morse has
NOTHING to do with RADIO and even LESS to do with TECHNICAL ABILITIES.
In fact, it has been my experience as a technical professional that
the major reason many technical experts avoid ham radio is MORSE.

By the way, Scott, please don't waste your time or mine by sending
me any more obnoxious e-mails if you are not willing to at least provide
a valid address for me to reply to ...

Of course. The cell phone is probably the most common element people can identify with. By claiming that this bill helps protect people from listening to your cell phone, you get a lot of otherwise ignorant-of-the-facts public on your side because, OBVIOUSLY, nobody buy a "peeping tom" would want to listen to someone's phone calls -- and (their rationale) "I KNOW *I* wouldn't want anyone listening to MY phone calls."

This is a tactic well known and used by many groups, especially groups like gun control advocates, who routinely parade "assault weapons" in front of the public as "cop killers" even though those classifications of guns are only responsible for 2.5% of the crime in the US during any given year. Same result from the public: "Well, I know *I* certainly wouldn't need one of those guns, so why does *HE* need one?"

This is the internet, untamed as it is.

When hams are here, we are internet users, vehemently agruing our
points.

The air is nothing like this.

You'd be better off to sell the computer and do more radio.

Maybe there is too little spectrum to go around. Maybe too many possible users.

So the selection procedure should be relevant.

Morse code hasn't been relevant for a long time. Technical knowledge is relevant to wise spectrum usage in this day and age.

Spectrum allocation to people whose highest and best use of intellect is 20 wpm is a waste of a valuable resource.

>Excellent point, EGW! I think I've spoken with you on the air in Chicago,
> before. Hmm...
>
>The code is obsolete and will be eliminated eventually. This is a reality.
>
>

This is where I disagree. The code is not obsolete. Everything has its place in ham radio, no-code techs have their place, and as a matter of fact, Every member of my EMA communication team is a no-code tech, with another studying for his no-code license. Without the no-code technicians, my department would be up the creek without a paddle.....
BUT code is definitely NOT obsolete. It is the least expensive transmitter to make, less than $5.00 for a 1 watt transmitter. They can be produced in an emergency in a matter of hours.
Yes, there are more efficient modes. I agree. But for a new ham operator starting out, those without the big bucks to spend, they can get a complete QRP setup very reasonable, and communicate around the world.

I don't agree no-code techs are lazy. I have said before and will say again, I agree with the concept of a no-code license. I also agree that code should not be shoved aside. There is a legitimate place for CW, as there is for digital, AM, FM, SSB, etc.

I do wish everyone would devote as much time to enjoying the hobby as they do bashing each other for code vs no-code. Will amateur radio become obsolete????? I don't think so, but it would be easier to steal band space if we are not united in the cause to keep our airwaves FREE, and our bands ENTACT.

>neighbors. It is a pity the US government doesn't see things that
>way. Like finding a place to put up an outside antenna, finding
>a place to shoot is becoming harder and harder due to pressures
>from neighbors and homeowner associations.
>

It is rather amusing, in a sick sort of way, that the same
government that jumps on the "health care" bandwagon on a
regular basis, also helps to promote hearing loss in recreational
shooters by not allowing the use of silencers. Intelligent
shooters use ear and eye protection, of course, but it certainly
would make life a bit nicer for the neighbors if silencers were
allowed, as well.

Unfortunately, a great deal of the local pressure stems from
people who don't understand the issues. Witness the great debate
about "assault rifles." The government and the press go to great
lengths to "inform" the public about how they are used by the "evil"
criminals, in order to effect a ban on their manufacture and import.
Of course, previously published (and easily researched) reports
indicating that they are used, in the US, in between .3% and 2.5% of
criminal assaults, are ignored. The average citizen has been made
to believe that anyone who likes to make things go "bang!" is a
deviant, at best, if not a potential mass-murderer. It's probably
a good guess that none of them have even read the Bill of Rights,
much less the Federalist Papers.

I recently finished a novel titled _Unintended Consequences_. It's
an interesting story about the escalation of gun laws since the
Firearms Act of 1934. The author needs a bit more practice when it

comes to storytelling, but the book does provide a useful, rational introduction to an uninformed reader about why gun laws are a threat to American citizens. I'd recommend it to anyone who has a reasonably open mind, but who questions the utility of current gun laws. And then I'd suggest looking up the court cases cited in the book to get their full background, as well.

I don't know if www.qrz.com has the mod..lemme check....Nope, they don't have it on their site or on the CD...checked both places. Mail or fax a copy of your MARS license to Icom or to the dealership from where you purchased your radio. I'm sure they would be glad to provide you with the mod.

Artsci Publishing has it in their 9A Radio Tech Mod manual. I just checked their web site, http://www.artscipub.com/mods/icom.html. They don't publish the manual on-line...my guess is they want you to purchase it. I don't have it or I would send it to you. Maybe there are some good samaritans out here who will get it to you if you don't want to do it otherwise.

>Well Glenn, I don't have a problem with thousands of new operators *BUT*
>The whole reason I got into amateur radio was to meet and converse with
>others who had an interest in radio, electronics, propagation, antennas

And other people got into the hobby for other reasons. The nice thing
about ham radio is that it's so diverse that there's room for many
diverse interests.

>and the like. The "tech" crowd always moves up, they were on 2m years
>ago (30 years ago), then when 2 became full of 'yakity yaks' they moved
>to 440, now 440 rigs are everywhere so the techies have moved to 900MHz

Not necessarily. The 222 band is wide open in most areas, and there's
plenty of "tech talk" on bands below 900, at least in some areas. If
congestion has forced some to pioneer new bands and modes, I'd say
that is GOOD thing, not a reason to restrict access.

>I guess I feel HF is the last place where you find the guys who are
>really interested in radio e.g propagation, antennas etc. If we open it
>up by making it EASY to get on HF I think were doing a disservice. Most

I disagree. How better to interest new hams in the intricacies of
propagation, antennas, etc, than to let them observe and discuss them
live and direct with those who have knowledge of such?

>of the new guys I find call themselves 'appliance operators' well, thats
>fine I'll talk to anyone. They seem to be very content to play radio on
>2m and 70cm using the 'yakity yak' local repeaters and have no interest
>in understanding what the K index is or even where to tune to find it.

A wonderful opportunity for you to teach them a bit about these
intriguing facts, wouldn't you say?

>Those that have an interest learn and move on, those who don't spend an
>amateur career on 2m. NO PROBLEM.

Exactly.

>Im not sure I want to GIVE UP HF that easily. No it's not a 100% filter

Nobody's suggesting that you give up HF, nor is there any need for you
to do so. Yes, a large influx of new hams may require you to adjust

your operating habits and adopt new ideas and new technology, but you
can handle that, right? A "real" ham does not fear innovation.

>and no it is not representative of current communcations technology, but
>it does make one WORK a little harder to enjoy the benifits and Im 100%
>for that. Much like getting a College degree, what you learn is rarely
>applied (engineering is probably an exception) but more a MEASURE OF
>COMMITMENT.

If such a "gateway" device is needed, then there are things much
better suited for such a purpose than a CW test.

Not precisely. There are local and state restrictions on the possession
of a scanner in a vehicle. Amateurs, of course, enjoy pre-emptions, but
that doesn't stop police from occassionally siezing them, anyhow.

I think that we need a discussion what place Morse Code will play in the next century. While some will remark that the military, including the Coast Guard, have deserted Morse, others will comment that the Navy Academy is still teaching it. There is a move to bring it back into MARS but that is due to some of the older members wish to continue using it.

We need to have people like Jeff Herman, who was there when the Coast Guard stopped the use of code, to give their insights of what the military and merchant marine communities are heading towards. We need the insights of others.

I am Army, still serving. We do not use the code, even morse intercept is gone. Digital is king. Even the Navy is highly dependant on digital with the Tactical Digital networks at the fleet level (I completed four years of Navy ROTC at Purdue just for fun and relief from my engineering courses). Most of business is going digital. But someone should keep the skills alive, if for no other reason than just fun and the romance of the old days.

I believe that we see the Morse requirement be lowered to 10-12 wpm. The 21 wpm will most likely disappear. But some familiarity is needed, just not a high skill level. This is in line with the rest of the western world. (Along with tougher but few testing elements.)

<SNIP>

THE ANT & THE GRASSHOPPER

The Original Version:

The Ant works hard in the withering heat all summer long, building
his house and laying up supplies for the winter. The Grasshopper
thinks he's a fool and laughs and dances and plays the summer away.
Come winter, the Ant is warm and well fed. The Grasshopper has no food
or shelter so he dies out in the cold.

The New Liberal (NO-CODER) Version: (by Will Bastian, Chico, California)

It starts out the same, but when winter comes, the shivering
grasshopper calls a press conference and demands to know why the Ant
could be allowed to be warm and well-fed while others are cold and
starving. CBS, NBC, and ABC show up and provide pictures of the
shivering Grasshopper next to film clips of the Ant in his comfortable
home with table filled with food.

America is stunned by the sharp contrast. How can it be that, in
a country of such wealth, this poor Grasshopper is allowed to suffer
so? Then a representative of the NAAGB (The National Association for
the Advancement of Green Bugs) shows up on Nightline and charges the
Ant with "Green Bias" and makes the case that the Grasshopper is a
victim of 30 million years of Greenism.

Kermit the Frog appears on Oprah with the Grasshopper, and
everybody cries when he sings " It's Not Easy Being Green".

Bill and Hillary Clinton make a special guest appearance on the
CBS Evening News and tell the concerned Dan Rather that they will do
everything they can for the Grasshopper, who has been denied the
prosperity he deserves by those who benefited unfairly during the
Reagan summers, as Bill refers to it, the "Temperatures of the 80's".

Richard Gephardt exclaims in an interview with Peter Jennings that
the Ant has gotten rich off the "back of the Grasshopper" and calls
for an immediate tax hike on the Ant to make him pay for his "fair
share." Finally, the EEOC drafts the "Economic Equity and Anti-Greenism

Act,&#65533; retroactive to the beginning of the summer.

The Ant if fined for failing to hire a proportionate number of green bugs and since he has nothing left to pay his retroactive taxes, his home is confiscated by the government.

Hillary gets her old law firm to represent the Grasshopper in a defamation suit against the Ant, and the case is tried before a panel of federal judges that Bill appointed from a list of single-parent welfare moms who can only hear cases on Thursday afternoons between 1:00 PM and 3:00 PM when there are no talk shows scheduled.

The Ant loses the case. The story ends as we see the Grasshopper finishing up he last bits of the Ant&#65533;s food while the government house he is in----which just happens to be the Ant&#65533;s old house-----crumbles around him, since he doesn&#65533;t know how to maintain it.

The Ant has disappeared in the snow. And on the TV, which the Grasshopper bought by selling most of the Ant&#65533;s food, they are showing Bill Clinton standing before a wildly applauding group of Democrats announcing that a new era of &#65533;Fairness&#65533; has dawned on America.

I've sat here and read the last 30 or so messages about Morse Code,
all the good points and the bad points. It seems to me that many
don't want to take the time and effort into learning the Code. I'm
not even of age to drink and got my license before there was even an
option in learning the code. I understand that it takes time and
isn't easy but the FCC has built the Amateur testing in a incentive
program. The faster you learn the code the more places you can go.
The more things you can do. The code is one of the aspects tested by
the FCC to assure a most basic of radio knowledge. Amateur radio is a
hobby.....most people enjoy their hobbies and attempt to learn as much
as there is to be offered from it. I personally hope the Code stays,
I enjoy learning it and hope to increase my speed each day. Best of
luck to all who take the test!

Hynde@flash.net wrote:

>..... but more a MEASURE OF COMMITMENT.

Hi Tim,

What is it that you feel we ought to make a "commitment" to?

At various times in my "amateur radio life" over several decades
I have been involved in a lot of diverse facets of the avocation, from
public service including travel at my own expense to remote disaster
areas, to experimentation with different technologies, to serving in
various capacities in local, regional, and national radio clubs, and
various other activities that could be loosely termed "contributing".

But *mostly* I am in amateur radio because it is a relaxing passtime
with various "challenges" to my skill or intellect and a high
"camaraderie quotient". In none of these activities have I ever felt
I was "committed", nor that my "commitment" ought to be some measure of
"worthiness". Nor have I ever felt that my Morse speed (considerably
faster than the requirement for my license class) was a measure of my
"commitment" to anything. I learned Morse as a child out of a sense
of curiousity, not as any rite of passage or demonstration of my
"commitment".

As a more practical measure, looking at the many thousands of volunteer
hours in this springs floods here in Minnesota, I saw no difference in
"commitment" between hams who had passed a Morse examination and those
who had not.

What am I missing here?

Maybe you can explain further how the 50.0 to 50.1MHz segment might
be used without ever learning a SINGLE character of code. You appear
to be implying one-way transmissions. Other than say establishing a
beacon between 50.060 and 50.080MHz I just don't get it.

I don't disagree with your general point. But perhaps you have
overstated it just a little bit with that "EVERY Hz" part.

And put down that mic, sonny. You're making me nervous.

The paddles, well-anchored, are closed to the gearshift knob
than a mic would be, and I can let go of paddles, while I'd
have to physically toss the mic away in order to grab the
shifter.

Besides, your right hand, if it weren't on the shifter...
Most people cruise at highway speed with one hand on the
wheel. Where's the other? Do we really want to know?

There were some interesting comments made at the recent Digital
Communications Conference in Baltimore, by DeWayne Hendricks. Now,
I'm paraphrasing his comments, but, in essence, he related a conversation
that he had with an FCC official. When asked about some of the Part 97
rules, the official replied, "We don't care what the rules are. Tell
us what you want to do, and we'll do it." It certainly *sounds* like
they want us to set the requirements, doesn't it?

You might want to check out the audio files of the conference when
TAPR puts them up on their web site.

>really nothing more than a fetish?

OTOH, should hams be required to pass a typing test in order to operate
digital modes ? In order to get that better throughput on a digital mode
you need to be a decent typist. Haven't seen too many 'hunt&peckers'
that can go over 20WPM <grin>.

Sorry, but I don't think that is true. The first cell phone tests were done in Chicago either at the end of the 70's or the very early 80's if I remember correctly.

Most of us who were using "Portable Phones" at that time were using HandiTalkies that we had added a touch tone pad to and were running them on IMTS frequencies and repeaters.

Of course many of us were using Autopatch repeaters for years before Cellular Phones came into being, but that was only for non-commercial use. If you needed commercial communications the IMTS lashup was the only way to go... and with a 2 tone paging set up it even worked on your pager if you rocked it up on the IMTS VHF Frequencies.

The Bearcat 210, for example, predated Cellular Phones by several years.

To those who like it and want to use it, yes ... to the rest of
us, no ... if one is not a horseman, one has little use for a
saddle...

Hi,

One could easily believe that it is because it is more expensive to use the airplane phones...

OTOH, cellular phones are not too good to use in the air, since there would be a tremendous amount of cells at about the same distance from the phone, and you would have a lot of handovers and confusion in the network, no?

Actually, I realize that ham radio IS a hobby. I've realized that for the last 37 years that I've been a ham. I had no choice of learning code when I entered these ranks, I'm glad I learned. To me, and I'm sure many others, code has a rhythm that can't be beat. If you send slow or fast, it is an easy method to communicate. I don't mind the non-code amateurs, I know several, even my son-in-law, which I helped obtain his license. What DOES tick me off are the complainers! The simple fact is that code IS REQUIRED if one wishes to have HF priviledges. Gripe, complain, bitch or moam. It doesn't change that fact. Some things take a little time, and more importantly, a little WORK. Most everyone can drive a car, you just have to have a license to do it legally. If the international committee decides to drop the cw requirement, then so be it. I and many other hams will still be using an old, outmoded, slow (if you can call sending/receiving at 64 wpm on a mechanical bug slow - try typing that driving down the road) mode of communications. That's what makes a hobby enjoyable. Being able to do your own thing, without having some snot-nosed wipper-snapper griping that it's OLD FASHIONED. You do your thing, I'll do mine.
73,
Mike

Sure he did "...-- ..... .-. .--. --" I'll bet many people
could be brainwashed to recognize that single, simple pattern
"in a couple of hours" ... at 3 to 5 word per minute equivalent
speed. <grin>

However, learning to copy any random combination of characters,
numbers, and punctuation at even 13 wpm can take months of
intensive effort ... some are simply incapable of EVER doing it.

Agreed. If they want to have tougher requirements for extra frequencies,
it should be more technical, not something that less than 1% ever use.

Hello Follow Hams,

The Fall cleaning is still going on. From my personal inventory comes the Kenwood TM-742A. Tri-Bander with Detachable Head. Radio has 2 meter and 440 bands in it and comes with the remote DTMF mic. I am the original owner and will let it go for $490 or best offer give or take. Those who know me from the flea markets know I keep my equipment in good condition.

Drop me a note or serious inquiries can also call me at my work number: 201-747-8595.

Will be willing to trade for a new Motorola Radius 16 pin 32 channel UHF high power and/or RIC for a repeater that I am building.

Not so...
CB is now and was when created in violation of international treaty.
The segment used 26.965 to 27.405 MHZ was a part of the amateur radio
alocation until the FCC created this special service. The old Hams can
remember when what is now CB was part of the Ham bands.

973. Uniden's Poor Customer Service

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-16 00:00:00 UTC
From: Scott Brader <sbrader@usavgroup.com>
Message-ID: <344604BC.58C@usavgroup.com>
Source record: 188532

After the experience my wife has recently had, I strongly discourage anyone from buying Uniden products. I have purchased Uniden phones, answering machines and scanners for years. I can assure you I never will again. Their customer service representative today HUNG UP on my wife when she called to complain about an ERROR THEY ADMIT MAKING!

My wife received a new BC80XLT as a Mother's Day gift. After only three months, the unit began malfunctioning. Since it was a gift she didn't have a receipt. The Uniden customer service representative told her they made no provision for gifts, you must have the receipt to receive warranty service, despite the fact that she had sent in the warranty card. After numerous calls, they finally agreed since the unit's serial number proved the manufacture date was within the one year warranty. I spoke with Heather Smith who agreed that the unit would be repaired under warranty. We sent the unit in. Approximately one and one-half weeks later, the UPS driver came to the door with a COD delivery from Uniden with charges for the service.

After a number of additional calls, the folks at Uniden admitted that they made a mistake, it should have been handled as warranty work. She was told to refuse the shipment and when the scanner was returned to Uniden they would "ship it back to her immediately with no charge." After two weeks, she called to check on the scanner. She was told that the package had been sitting at the dock since its return. They said they were terribly sorry, it was their mistake, they would try to ship it out within the next 48 hours. My wife said that isn't acceptable, they should see that it shipped today for delivery to her tomorrow since she's been waiting for a month now for what was supposed to be a couple of days and it was their mistake. The customer service representative, if you can call her that, named Michelle then proceeded to hang up on my wife.

I will never buy a Uniden product again and I will tell everyone I can about their terrible customer service every chance I get.

It is probably a legacy of Clinton. If you can not win an argument based on a discussion of the facts then try to attack the character of your opponent (even if that means you have to LIE to do it). Hitler did it best ... tell a big enough lie long enough and some/many people will start to believe it. Clinton has just studied Hitler.

975. W5YI study guide update

Newsgroup: rec.radio.amateur.misc

I'd like to thank everyone on the newsgroup who responded.

For a little education for those who don't know - the GROL is the General Radiotelephone Operators License. It is also known as the "commercial" or "general" license, and permits you to operate and maintain transmitters of radio and tv stations, aboard boats and aircraft, etc.

I've ordered my study manual from the W5YI group. They have two versions. For about $30 you can get a 400+ page book. For about $60 you can get the book and software (what I got). Shipping in either case is $4, and they ship US Postal Service Priority (3-4 day delivery).

Their web page, www.w5yi.org has some very good information on the GROL license, explaining what it is about, what you can do, etc.

Their order number is: 1-800-669-9594 (or 1-800-669-W5YI)

73 all,

Fine, keep it alive; many will do so. However, the "doing so" need
not be forced on others by government, as there is no justification
for government to continue to do so, IMO.

>

Why, if at all, is familiarity, "needed"? Awareness of its
existence, yes; curiosity, yes; capability, yes; ability and skill,
yes. But by choice, not by force, IMO.

A properly designed silencer has neither of those defects. You should check
out the silencers required in Finland. They are wiperless and have no more
effect on accuracy or velocity than a properly designed muzzle brake. They
use them in *competition*, and their scores are *very* competitive with
those of shooters not using silencers.

>And while neighbors may
>be happy not to hear the shots of drive by shooters, they might want to know
>when they occur so as to check on the kids. (We've had a number of kids
>killed in their own homes this past year in California by drive-by shootings.

And no doubt you've had a number run down by automobiles too, but you
don't require autos to run without silencers (mufflers) do you?

The overwhelming majority of shots fired are totally innocent of ill intent
or ill consequences, and shooters and the public would benefit if the noise
generated by those shots were silenced. Live next door to a firing range
for a while and then tell us if silencers are a bad thing.

Good? Well, probably not.

About a year ago I saw a movie called "High Frequency" about a kid who
gets on an HF rig and ends up in Washington, DC. It was interesting,
but lame.

You didn't read very well (again) ... I said that an individual
part could fail, but not cause a total system outage ... I have
redundant computer systems ... the likelihood of ALL of them
failing is virtually zero ...

(And I hope you had tape backups when your HD crashed ...)

The systems work in the vicinity of 800 MHz and (perhaps) in the
"L band" though I am not sure of the latter ...it's been a while
since I had contact with the technical specs for the AirPhone
system and the details are consequently vague and some may have
changed.

There are something like 20-30 ground stations in the US, I believe
and the range is obviously good from cruising altitude.

These systems are permitted on the planes because it was a specially
licensed service, the equipment has been proven not to interfere
with the airplane's systems, etc.

Using cellphones on airplanes is prohibited because they have not
met the requirements listed in the preceding paragraph and because
doing so would create interference to every cellsite using that
channel within a radius of several hundred miles and defeat the
"frequency-reuse" aspects that cellular systems were intended to
provide.

Robert ... get your tech plus license ... (most of) the folks
on VHF/UHF are FAR friendlier than the olde fartz beepers on HF,
whose primary interest in (what's left of their) life seems to
be "keeping all those &^%$#@ no-coders off of 'our' HF bands."

Don't let them get to you ...

And this newsgroup and rec.radio.amateur.policy contain a lot of
heated debate on the topic ... that's actually the primary reason
the .policy was created ... though a lot continues here on .misc.

987. infighting

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-16 00:00:00 UTC
From: me <nobody@ou812.cya>
Message-ID: <01bcd9c7$26003b80$21286020@reze.bellsouth.net>
Source record: 188589

I am currently studying to upgrade my license from novice to tech plus. I have had my novice ticket for over 10 years (renewed in march 97) . After lurking in this and other ham groups for a while I am having second thoughts. It seems that all hams nowdays do is fight. I thought after reading various books and articles on the subject that the amatuer community was a friendly place. It seems that the books were wrong!.

All I see here is a lot of argument about code-nocode and various and sundry other pissing and moaning. Not a lot of usefull info for a fledgling ham or any encouraging postings that would want to make an outsider want to join in the "fun and exciting world of amatuer radio".

When I was first learning theory and code to get my novice license, I attende a couple of club meetings with a friend. all I saw at those mettings was a bunch of old farts arguing and gossiping about things that wern't related to radio. Now that I have jogged my memory , That is the reason I never persued it any further. It seems that things have only got worse. I am not all that interested in rag-chewing but, DX might be fun and sattelite or APRS might interest me too. I mainly wanted to upgrade so I could get on 2 meters but with what I see I am not sure if it is worth it. I am afraid that after I invest a few hundred bucks in it that it will turn out to be only a few steps from chicken band radio.

I feel that I should just forget it and spend my money on a whizbang new computer system or a way-cool home theater setup. Having gone this far I will go to the hamfest in chattanooga and take the test but, it will probably end there.

My two cents worth,
Yes I studied code, yes it was hard to learn, should others be forced to learn it? If it means the demise of ham radio, NO!!! Do I resent others not having to learn it to get a ticket? NO! Times change, people change. In todays world it is an antiquated mode of communication. I can send more info from my BATTERY operated laptop hooked to a radio in ONE second that the fastest paddle thumper could put out in an hour!!! NO offense or putdown intended!!!!!!!!!!!!!!!!!!!!

Thats MY opinion and I'm welcome to it ;)

If you are referring to the story that the Sheriff of Marion County,
WV seized CB radios because he didn't like the language and content he
was hearing, and that he seized one because the operator additionally
called him names and otherwise insulted him, well . . .

In an interview broadcast on WBOY-TV (NBC, Clarksburg, WV) the good
sheriff said exactly that.

Thus, looks like it's true.

Can you possibly imagine the uproar in Marion County and the
surrounding area???

None whatsoever!

In fact, he was rather warmly supported.

Robert ... Don't pay any attention to Carl. He's just a codeless tech
who is sore that he can't get a "Get Out Of Morse Free" Card in the
game called Hamopoly.

You'll find thousands of people to communicate with on ham radio. Yes,
there are some troublemakers, but considering they represent a very small
fraction of the total number of licensed operators, its really silly to
focus on them -- I would much rather focus on the hundreds of ragchews
I've had over the years that gave me many hours of pleasure.

Review the amateur radio licensing structure, and evaluate for yourself
what your interests are, and decide on a license class that gives you
the access that cooresponds with your interests. Don't let other people
decide what license is right for you, tell you you "should be" a
no-code tech, or "should be" an Extra.

>And this newsgroup and rec.radio.amateur.policy contain a lot of
>heated debate on the topic ... that's actually the primary reason
>the .policy was created ... though a lot continues here on .misc.

Of course, Robert, what Stevenson doesn't say in his message here,
is that HE is a primary reason why code/nocode debate still continues
on .misc. Months ago when Carl was asked to move his code/nocode
insults about "beepers" and so on to .policy, he refused, claiming
that it was a conspiracy to shut him up. Well, we'd all wish he would
shut up, but nobody wants to shut him up.

Anyway, get involved, and you'll make many new contacts and friends through
the hobby. Good luck,

MD

Hi Robert,

The books were right.

Fortunately, this newsgroup is *not* a reflection of amateur radio. Here
you will find a small inbred group of folks, probably less than 25
"regulars" and not all of them licensed, who derive some measure of
satisfaction in regurgitating a small collection of opinions over and
over and over and over and over and over some more.

The "infighting" you see here is almost totally absent in RL (Real Life).

I have a bit of advice for you. In my almost 20 years as a ham, I have
found that the best part of amateur radio actually occurs in two places:

1) On the air; that is, on the actual "radio" in "ham radio."
2) By one's self - designing, building, and tweaking things.

I enjoy the newsgroups a lot, but they are a tangential world in relation
to the hobby. You mention that you might find DX to be fun, and with this
I agree. It's what I personally find the most fun, along with building
antennas and writing radio-related software. You'll note that none of
those activities involves face-to-face contact with other hams. It's
not that I eschew this, but I don't seek it out either.

I too have tried a few club meetings in my years, and they were all
full of cliques of 2m jockeys and old folks who congregated in closed
groups. I would have liked to have hung out with the old dudes, but
I sensed no welcome from them and didn't want to intrude. It's their
experience that fascinates me a lot more than the latest HT.

But that's no never mind. Upgrade your license, and ignore the B.S. you
find here. Read some of the other rec.radio.amateur groups, such as
.dx and .antenna. You'll find less wrangling and code nonsense there.
Amateur radio is not about arguing on the internet, it's about radio.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
October 19th, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Seperate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Source record: 188608

I am looking for a board to do the exchange in conjunction with the TR logging program. It would then make SSB work like CW, automatic exchange transmission, rather than a lost voice after a weekend of sweepstakes. A plain recording won't do as variable parts like the QSO number need automatic updating.
I have been thinking about prgramming my sound card to do this. With a text to voice application it should not be too hard. I find that TR runs nicely in a dos window under windows 95 and this would give me a real reason for multitasking. I am not sure what the interface to TR is that could let the board or program know what message to send. I will also post this to the TRLog mailing list.

Hi Tim, if not a 'Super Class', how about one additional technical (and I do mean technical) exam that can be substituted for the 13wpm Morse code testing requirement? Thus, a tech+ (who already satisfies the treaty requirements) could become a General by taking an additional relatively difficult exam covering more technical aspects of the hobby like digital design, communications theory, Smith charts, unit circles, etc. It's similiar to the WOG (written only general) proposal except a lot more technically difficult and demanding of effort and commitment.

IMO someone who knows how to program a Pentium(R)MMX(R) to send/receive CCW at 50wpm (in addition to all the other digital modes) is more valuable to the ARS than someone who can only send/receive 13wpm by hand/ear.

Well, there you go. Since that 3.75 MHz sliver of the amateur spectrum is THE MORSE SEGMENT, and Morse is the second most popular mode used there, and Morse requires some skill and training relative to the most popular, then why don't you support the 13 WPM testing for HF access now? It only makes sense.

Do you think promoting No-Code access on HF is going to alleviate the problem, or have no effect on the problem? No, it is going to make the problem worse. It is like saying OK, international pilots and air traffic controllers can speak their native tongue. English is no longer required. Like to take a ride on that system?

Note that there are *no* CW exclusive segments on HF, only on 50.0-50.1 MHz
and 144.0-144.1 MHz, where ironically no Morse test is required. And many
countries do not formally segment their amateur bands the way we do. That's why
you often hear foreign amateurs running voice in the US data segments on HF.

>160m: Amatuer radio has only SECONDARY status to the primary radiolocation
> service.

But since Loran A has been abandoned, this has become a moot point. And US
amateurs are allowed to use analog voice emissions anywhere on 160m anyway.
There are no formal by mode sub-bands here.

>80m:In region 1 we share on a co-primary basis with fixed, and mobile services.
> Broadcasting is on a co-primary basis from 3.950-4.0 mHz. etc.

But note that amateurs are allowed to use analog voice on those frequencies.

> It goes on and on.....

Indeed, but it doesn't make a very convincing case for exclusive Morse
sub-bands, and in fact there aren't any at HF in US regulations.

Ed, please do not take this wrong as I enjoy your postings.
How much spreading is required or is the width relevant with regards
to overcoming fading, noise, etc.? It seems to me that unless most
of the spectrum users, amateur, military, and commercial switches from
narrowband to SS simultaneously that spreading, even just an octave,
would be unworkable. Was the 900MHz SS success due, in part,
that there was little else there to begin with?

The goal of any communications system is to provide quick, effortless, efficient communications. Designers strive for better stability, better ability to work at lower power levels, to work in the face of adverse propagation and interference, and to achieve lower ultimate error rates. As stated in the preamble of the Communications Act of 1934, which remains (as amended) the authorizing legislation for amateur radio, the goal of the Act is to provide quick and efficient radio and wire communications to the American people through provision for advancements of the radio art. (And note very well, they aren't talking about fine arts, they are using the term in the sense of industrial art, or as we call it today, engineering.)

Amateurs are uniquely permitted, among the radio services, to do hands-on on the air engineering and testing of radio systems. Those who fail to do so are the ones truly trying to turn amateur radio into a Personal Morse Telegraphy Radio Service.

Beyond its utility for plebe hazing, what other explanation do *you*
have for it still being taught at Annapolis? It certainly is no longer
in military use by US forces.

>How does it explain the return of Morse to the MARS operations?

I explain it by noting that there has *not* been a return of Morse to
MARS operations. That report was erroneous.

>Apparently
>many still regard Morse CW mode as more than a quaint recreational
>exercise.

Apparently some do, but their regard doesn't have a sound theoretical
or practical basis. Every radio service except amateur radio has recognized
that, and has phased out use of Morse in favor of superior techniques.
Amateur radio has the *luxury* of using radio for recreational purposes
when more important communications isn't being carried out, so Morse
use has lingered here, but that is not a sufficient reason to *require* Morse
testing to access amateur spectrum which permits *other* modulations or
codings to be used, and all of amateur HF *does*.

Have you ever wanted to contact a celebrity? Ever wanted your favorite
celebrity to send you a personalized autographed picture? If you have, then
you will need this list. It is a list of over 5,000 celebrity addresses.
And it is guaranteed that the celebrity you are looking for is on the list,
or you will get your money back! You can get this complete list of over
5,000 celebrity addresses for only $10.00. My list has been used for:

Autograph Collecting
Fund raising
Real estate sales
Security system sales
Fan mail/appreciation letters
Birthday cards
Get-well cards
Speaking invitations

Included is a document that explains the easiest and fastest ways to get
replies from the celebrity. A list like this cannot be found for less!
For $10, you can get this list sent to your email address the next day after
receiving your order. For an extra $2, you can get the list mailed to your
residence on a 3.5" disk. Here's how to order:

If you want the list emailed to you..... Total = $10.00
If you want the list sent on a 3.5" disk..... Total = $12.00

Please include your name, address, and be sure to include your email address.

Sorry Carl. No matter how many times you say this it just ain't so on my radio. Commercial ship-to-shore stations are still operating, all over the world. It is still being taught at Annapolis. It is still the second most popular mode outside of voice in the ham bands.

Don't bet more than you can afford. Even on an old QWERTY keyboard, a one handed typist can still exceed 60 WPM. And have you ever tried a chording keyboard? It is possible to exceed 100 WPM on one of those while still being able to keep both hands on the steering wheel. (You don't have to move your hands at all to use a chording keyboard, only press combinations of keys simultaneously with finger pressure to encode the characters, and you can easily attach it to the steering wheel in such a way that you are simultaneously keeping both hands on the wheel.)

You might have done better to ask about reading the laptop screen while driving. But good text to speech software is now available, so your eyes need never leave the road to use a computer in the car. Voice to text software isn't as advanced, but it is coming along too. Speaker independent continous speech software can now achieve 95% accuracy, and speaker dependent software, IE you have to train it, can do better than that.

Mr. Scott's remark, "Keyboard? How quaint." isn't that far from reality. (Computers are still far from understanding what you *mean*, however, so AI computers like those on Star Trek are still far from reality. But computers capable of transcribing speech don't require that level of sophistication.)

Not true, as has been covered here repeatedly. There are a number
of digital techniques in amateur use (and even more in commerical
and military use) which are more robust than OOK Morse. Those
techniques have displaced OOK Morse use in other radio services.
It is trivially true that OOK Morse is more robust than analog voice,
but that is *not* the only other method available to amateurs. And
those other techniques would tend to gain more acceptance among
amateurs if it were not for this pervasive myth about OOK Morse
superiority.

Exactly. No one is threatening to *ban* OOK Morse *usage*. There
will always be a place for it for those who wish to use it. But it should
be able to stand on its own merits and not uniquely enjoy a government
recruitment subsidy.

The way we've handled it is to maintain no organization and no
agreements. We simply *donated* the resources needed to set
up the repeater with no expectation of later recovery. And we
pass the hat when things need repair or upgrading. Those who
do the actual work of installing and repairing the equipment
decide how to do it. Those who don't participate in this work
don't expect it to be done their way. This may seem too simple
to work, but we've been able to do it for the past 8 years without
any problems.

TOM:

As an Extra Class operator, you should be fully aware that using a radio
not specifically type-accepted by the FCC for Part 80 frequencies is a
serious violation and could result in the loss of both your marine and
amateur licenses.

I submit, because of the above attitude and mindset that you promote,
the incidents of interference from appliance operators who only watch
the dancing lights on their MFJ is increasing. Why do we see pleas
even from international operators, on the internet, in QST, etc.,
to desist from these despicable practices?

Also, it seems strange that you would take such as position when
on the other hand you describe these "Whizbang" modes as so robust
that you can get 100% copy even though they cannot be *heard by the
human ear*. Or are you saying that MORSE OOK is unique in that
anyone can tell if they're interfering by just listening and
not decoding? Is this the essence of your experience on HF?

Gladly. One needn't be able to decode the modulation on a signal
to detect its presence and avoid firing up on top of it. Why is that
so hard for you to comprehend?

APRS ACTIVITIES HIGHLIGHT DIGITAL CONFAB

The more than 150 hams attending the 16th ARRL/TAPR Digital Communications Conference last weekend heard much about advances in Automatic Position Reporting System (APRS) applications. The conference ran from Friday through Sunday, October 10-12, in Baltimore, Maryland.

On Friday, the "father" of APRS--Bob Bruninga, WB4APR--held an all-afternoon seminar covering present and future APRS developments. He had help from Keith Sproul, WU2Z, Mark Sproul, KB2ICI, and Steve Dimse, K4HG. Several APRS papers also were presented during the conference sessions on Saturday.

Other subjects covered prominently at the conference included spread-spectrum systems--the subject of several papers and of a

well-attended Sunday morning seminar conducted by Phil Karn, KA9Q, Tom McDermott, N5EG, and Dewayne Hendricks, WA8DZP. That session discussed a 900-MHz spread-spectrum radio that's in the design stage. In a Saturday session, Tom Clark, W3IWI, explained in detail the Global Positioning System (GPS), which is used by TAPR's "Totally Accurate Clock" (TAC) kit, which Clark designed.

Winners of the second annual student papers awards were Matthew Ettus, N2MJI, of Carnegie Mellon University, for his paper, "An All-Software Advanced HF Modem for Amateur Radio," and Mamdouh Gouda, Ernest R. Adams and Peter C. J. Hill, of Cranfield University in the UK for their paper, "Detection and Estimation of Covert DS/SS Signals Using Higher Order Statistical Processing." Ettus and Gouda attended the conference. Travel to the conference by the student winners is subsidized by the award, funded in part by a grant from the ARRL Foundation, which supports experimentation in satellite, digital, APRS, spread spectrum, and other innovative technologies.

The 1997 Digital Conference Proceedings are available from the ARRL or TAPR. When ordering from the ARRL, ask for Item # 6362. It's $15.00 plus $4.00 for shipping and handling. Credit card orders are accepted via the toll-free order line, 888-277-5289, or via the ARRLWeb, http://www.arrl/org/catalog/. You also may order by check, money order or credit card by mail to ARRL Publication Sales, 225 Main St, Newington, CT 06111.--Jon Bloom, KE3Z

WORLD RADIOCOMMUNICATION CONFERENCE 97 TO OPEN IN GENEVA

Four items of prime interest to Amateur Radio will be on the agenda when the World Radiocommunication Conference 97 (WRC-97) opens October 27 in Geneva, Switzerland. ARRL Technical Relations Manager Paul Rinaldo, W4RI, is a member of the US delegation to the conference. Others attending include IARU representatives Larry Price, W4RA, Wojciech Nietyksza, SP5FM, and Michael Owen, VK3KI. Representing Canadian amateurs on his nation's delegation will be Jim Dean, VE3IQ, of Radio Amateurs of Canada (RAC).

WRC-97 delegates will discuss the so-called "Little LEO" issue during the monthlong session. While the Little LEO industry's preliminary proposals to share 2 meters, 1-1/4 meters and 70 cm generated quite a stir in the amateur community last year, current US proposals do not include any plans for sharing of amateur frequencies. Also of interest to hams is the specter of increased interference on some amateur UHF allocations from Earth Exploration Satellites (EES), used for mapping by synthetic aperture radars (SARs) that are expected to be mostly active in the Southern hemisphere. Amateur radio delegates will make known the needs of our service. WRC-97 will be asked to consider allocating the band 430-440 MHz to EES and upgrading the status of EES at 1240-1300 MHz.

Wind profiler radar systems operating near 50, 449 and 1000 MHz also bear watching because of the potential for interference to Amateur Radio. These systems are used by weather forecasters to look at wind patterns in the higher atmosphere.

WRC-97 delegates also will set the agenda for WRC-99, where the potential exists to establish a worldwide 40-meter allocation. The current US concept calls for a "harmonized" band at 6900 to 7200 kHz that would be available to hams around the globe. This would mean hams would shift down by 100 kHz while broadcasters moved 100 kHz up the band. Yet to be determined is how fixed services would be handled in the realignment. The IARU is committed to the goal of a 300-kHz worldwide exclusive allocation for 40 meters. Right now, only 7000 to 7100 kHz is available in Regions 1 and 3, where broadcasters dominate the upper 200 kHz of the band.

WRC-97 is scheduled to conclude November 21.

GEORGIA HAM WORKS KC5VPF ABOARD MIR

US astronaut Dave Wolf, KC5VPF, has settled in aboard the Russian Mir space station to the point that he finally got a chance to get his feet wet on 2-meter FM last weekend.

Tom Crowley, KT4XN, in Atlanta, Georgia, reports he responded to Wolf's CQ as the spacecraft passed over Southern Florida. "We talked for about 5 or 6 minutes on 145.985 MHz," Crowley said.

"Dave said they had just finished dinner and watching a movie. He said he was trying to fix the CD player for music. Otherwise, just enjoying the view and taking it easy on Sunday."

The contact between Wolf and Crowley was the first reported Mir-to-Earth FM voice contact since Wolf joined the Mir crew in September. Wolf is a relatively new ham and has little on-the-air experience. Before he returned to Earth, Wolf's predecessor, Mike Foale, KB5UAC, gave him a quick course on how to use the ham gear and packet system.

Incidentally, the SAFEX 70-cm FM repeater aboard Mir is not yet back in operation.

NASA: KD5CHF TO BE NEXT--AND LAST--US ASTRONAUT ON MIR

It's now official: Astronaut Andrew S.W. Thomas, KD5CHF, will be the final US crew member to live and work aboard Russia's Mir space station.

Thomas will launch aboard the shuttle Endeavour as a member of the STS-89 crew in January 1998 to begin a four month stay on Mir. He has been training in Russia since January of this year as the backup to David Wolf, KC5VPF, who began his tour aboard Mir on September 28.

"Andy's assignment to Mir provides a great deal of flexibility to support crew activities on board," said David C. Leestma, N5WQC, director of Flight Crew Operations. "I have every confidence in his abilities. He will be a valuable addition to the crew."

Thomas, recently in the US for science training to support his Mir mission, returned to the Gagarin Cosmonaut Training Center in Star City, Russia, outside Moscow in early October. Joining Thomas on the return trip to Russia was astronaut James S. Voss, who will serve as Thomas' backup. Voss has been training in Russia as backup to Michael Foale. Thomas will join previously

named STS-89 crew members Commander Terrence W. Wilcutt; Pilot Joe Edwards; Mission Specialists Bonnie J. Dunbar; Michael P. Anderson; James F. Reilly II; and Cosmonaut Salizhan Shakirovich Sharipov, a first-time space flyer.

Thomas' scheduled departure from Mir aboard Discovery (STS-91) next May will conclude more than two years of continuous American presence on Mir, which began in March 1996 with the arrival of astronaut Shannon Lucid.--NASA

NO HAM "VICTORY" IN RECENT LITTLE LEOS PACT

Several hams have touted a recent FCC announcement about Little LEO allocations as a victory for ham radio. This is not the case, however. The recent announcement simply formalized an agreement among the five remaining Little LEO (low earth orbiting satellite industry) applicants over how to divvy up VHF allocations the industry already shares with US government services.

As noted elsewhere in this edition of The ARRL Letter, a request for additional allocations (and the remote possibility of sharing on amateur frequencies) will be on the table at WRC-97 in Geneva, which kicks off later this month. This is not an issue for the FCC alone to decide, but the FCC has had input to the positions of the US delegation to WRC-97. At this time, there are no US proposals on the table at WRC-97 that involve Little LEO sharing of Amateur Radio frequencies.

In reporting the new agreement recently, Wireless Week quoted Aileen Pisciotta, attorney for Final Analysis (one of the remaining Little LEOs), as saying: "It is agreed to with the expectation that additional spectrum will be made available in the future." As most hams know by now, the Little LEOs already have proposed sharing three of our VHF and UHF bands to obtain that "additional spectrum" that Final Analysis is "expecting" to get.

The Little LEOs already have access to 148-149.9 MHz (uplink) and 137-138 MHz (downlink), plus some space in the 400 MHz band.

SEARCH CONTINUES FOR NEW PHASE 3D VEHICLE

Germany's AMSAT Vice President Peter Guelzow, DB2OS, this week expressed confidence that the Phase 3D Amateur Radio satellite will get off the ground in 1998. "We are certain that P3D will be launched next year on an Ariane," he said in a statement released by AMSAT News Service.

Guelzow's prediction concluded a lengthy statement in which he called on hams to not "jeopardize the present negotiations by speculations and expressions of bad tempers." Phase 3D had been scheduled to be launched aboard an Ariane rocket in late September (the launch of the Ariane 502 has since been delayed by another month until October 28 "at the earliest"). But last-minute revisions in the European Space Agency's predictions of vibration and stress aboard the flight meant AMSAT had no time to meet new mechanical specifications and still stay on schedule. Guelzow called the situation "very regrettable," but said AMSAT had to accept it.

Some hams were not as complacent, however and publicly took ESA to task for bumping Phase 3D from the Ariane 502 launch. As the Phase 3D Program Board had done just last month, Guelzow suggested that such actions were counter-productive. He also said he's optimistic that the Phase 3D program will learn and benefit from the Ariane 502 launch, once it happens.

"Immediately after the AR-502 launch, AMSAT and ESA will have enough facts to search for an amicable solution which will guarantee an early launch of P3D taking into consideration the actual Ariane flight-planning," Guelzow said.--AMSAT News Service

VIRGINIA HAMS TELL "HOW TO SUCCEED IN ZONING"

Hams in Virginia's Rockingham County were rewarded earlier this month for their efforts to get Amateur Radio towers excluded from a new zoning ordinance being drawn up to deal with the proliferation of cellular telephone towers. Teamed with an ARRL Volunteer Counsel and another ham-attorney, the group quietly lobbied the county officials responsible for drafting the ordinance, so they could head off any problems at that level instead of waiting for a public hearing.

Paul Helbert, WV3J, is a member of the Massanutten Amateur Radio Association of Harrisonburg, Virginia. "The most important thing we did, I think, was to go to the board members, the county's attorney and planning staff during the week before the meeting so that they had no surprise and no mystery as to our concerns," he said. Helbert credits ARRL Volunteer Counsel Paul Schwartz, KB2XX of Charlottesville, and Staunton attorney Charlie Garner, WA4ITY, for coming up with the approach.

Helbert says he found out about the proposed ordinance almost accidentally during a conversation with Bill Fawcett, WB4PWP, who's involved with commercial radio. The draft ordinance placed restrictions on the placement, erection, and maintenance of radio transmitting facilities, including antennas, towers, poles, and other support structures. The proposal was especially hard-hitting to radio transmitting installations in residential areas. The original draft made some concessions to ham radio by excluding ham towers less than 50 feet tall. Other provisions would have made it prohibitively expensive for most hams to erect a tower taller than that.

Helbert helped spread the word among area hams who, in turn, contacted individual supervisors and the Board chairman. Garner helped draft a resolution on behalf of the Valley Amateur Radio Association and the Waynesboro Repeater Association. The Massanutten Amateur Radio Association executive committee also presented arguments to members of the county board.

"At all times were the hams polite, courteous, and in no way confrontational," a story in The MARA/VARA Monitor reported. "The purpose of all this activity was not to appear adversarial [but] to simply remind the government officials of the hundreds of hours hams had spent in emergency communications support and to politely inform them that the de facto 50-foot limitation on ham towers would inhibit some hams' ability to provide that service in the future."

More than 40 hams--well identified with name and call sign badges--turned out at the September 24 meeting of the Rockingham County Board of Supervisors. Five, including Helbert and Garner, spoke on their behalf. The Board commended the ham community for its public service and remanded the proposed ordinance to the Planning Commission for a rewrite, this time to include a complete exemption for ham radio antennas. The Planning Commission adopted the changes October 9.

As an unexpected and unrequested bonus, the county Board of Supervisors also struck an existing zoning law provision that required hams to obtain a special use permit to erect a tower.

As ARRL Regulatory Information Branch Manager Tom Hogerty, KC1J, observed: "This is a good example of how hams should interact with their city and town governments when dealing with zoning issues."

ARRL ANNOUNCES 75th ANNIVERSARY EDITION OF THE HANDBOOK

The 1998 edition of The ARRL Handbook for Radio Amateurs is out and at a new, lower price. This marks the 75th edition of this standard electronics reference book, which will sell for $32. Over 6 million copies have been sold since it was first published in the 1920s. Radio amateurs, electronic experimenters, engineers and technicians all have reserved a prominent place on their bookshelves for this essential electronics reference.

And the Handbook will continue to be available for years to come. Contrary to information circulated in Great Britain and elsewhere, the ARRL plans to continue the printed edition of the ARRL Handbook for Radio Amateurs. A report in the November issue of Practical Wireless, a British magazine, erroneously stated that the League planned to discontinue the printed Handbook in favor of the CD-ROM edition. "The paper Handbook remains our flagship technical publication, and we do not see that changing any time soon," ARRL Publications Manager and QST Editor Mark Wilson, K1RO, emphasized in a letter to Rob Mannion, G3XFD, the editor of Practical Wireless.

The 1998 Handbook provides 1200 pages of radio communication and electronics information--both theoretical and practical. A wide variety of construction projects and examples illustrate basic and advanced theory, from dc to microwaves. Schematics and photos help clarify principles, and several hundred tables provide valuable reference data. The use of a PC for both design and hardware control is integrated into many of the topics covered.

New projects in this edition include a high power, high efficiency antenna tuner, a new superregenerative VHF receiver that automatically receives several different types of modulation, and an integrated L-band antenna and amplifier for satellite use.

The book's 30 chapters cover ac/dc theory and components, analog and digital signal theory, test equipment and techniques, and other topics. Later chapters are devoted to power supplies, modulation, transmitting and receiving equipment, antennas, propagation and station setup. Chapters on components, construction, safety and electromagnetic interference cover the hobby's practical aspects.

To help make the book reader-friendly, each chapter has a printed thumb tab and a mini-table of contents opposite the first page of most chapters.

Instead of bundling software with the handbook, all programs associated with some projects will be available free of additional charge from the ARRLWeb and the Hiram Bulletin Board (860-594-0306). All the software runs under Windows, and most works under DOS as well.

The ARRL Handbook for Radio Amateurs is item number 1786. It's available from Amateur Radio dealers or ARRL Publication Sales, 225 Main St, Newington CT 06111-1494; tel (toll-free) 888-277-5289 or fax 860-594-0303. You can also order publications via the Internet at http://www.arrl.org/. When ordering from ARRL, include $6 for UPS shipping.

SOLAR UPDATE

Propagation prognosticator Tad Cook, K7VVV, in Seattle, Washington, reports: Judging from the high solar flux and sunspot activity over a month ago, recently we expected to see more of that same activity, since the sun rotates relative to Earth once every 27.5 days. Unfortunately, by the time the rotation was complete, most of those active regions were gone.

This week we saw solar activity go up only by a little. On five out of seven days the solar flux was above the average for the previous 90 days. Geomagnetic activity was up a lot though over last weekend, when the Estimated Planetary K Index was up to six over several periods. This is a very high value, indicating very stormy conditions with high absorption of radio signals. The most recent forecast indicates a small rise in solar flux into the low 90s next week, peaking around October 22 and 23, then dropping back to the mid-80s before the end of the month. Look for unsettled to active geomagnetic conditions around November 5 and 6.

The NOAA Space Environment Center reports that a panel of solar experts met recently and fixed the probable date for the solar minimum around October 1996 and within a possible range from May through December. Panelists believe that Cycle 23 should be a large cycle, but not as big as Cycle 19 in the late 1950s. They expect it to peak around March 2000 and within a range from June 1999 to January 2001. This places the peak in the very near future, but sunspot cycles go up much faster than they go down.

Sunspot numbers for October 9 through 15 were 27, 44, 31, 60, 44, 44 and 47 with a mean of 42.4. The 10.7-cm flux was 83.5, 84.2, 86.1, 88.7, 88.3, 84.8 and 86.9, with a mean of 86.1, and estimated planetary A indices were 19, 27, 26, 7, 7, 5, and 4, with a mean of 13.6.

BYRON H. KRETZMAN, W2JTP, SK

Ham radio columnist and AM enthusiast Byron Kretzman, W2JTP, of Seattle, Washington, died September 22, 1997. He was 79. Eric Nelson, WB2CAU, reports that Kretzman was a very active AMer on Long Island, New York up until he moved to Seattle in 1988. While still in New York, he served as the RTTY columnist--and later as RTTY consultant--for CQ magazine from the mid-1950s until the early 1970s. He also authored The New RTTY Handbook, published in 1962.--thanks to Eric Nelson, WB2CAU

IN BRIEF:

* This weekend on the radio: In addition to JOTA (see below), you can enjoy the ARRL International EME Competition (see QST, Sep, 1997, page 120), the QRP ARCI Fall QSO Party (CW), the RSGB 21/28 MHz Contest (CW); and the Illinois QSO Party. A reminder, the YLRL YL Anniversary Contest (SSB) is Wednesday, October 22, until Friday, October 24. See page 107 of October QST for details on these and future operating events.

* JOTA reminder: The 40th annual Jamboree on the Air--JOTA--takes place this weekend. This is a chance for Scouts and Guides around the world to get in touch via ham radio. The Amateur Radio station of the World Scout Bureau, HB9S, will be active from the place in central England where the first JOTA was tried out in 1957 (the first "official" JOTA happened the following year at the same location). K2BSA/6 will be on the air from Huntington Beach, California, all bands and modes. For more information on JOTA, see "Jamboree on the Air--JOTA '97," QST, Oct 1997, page 68.

* Vanity update: With the FCC yet to announce when it plans to open the last vanity call sign program gate, the program continues to be popular. The FCC in Gettysburg reports it received 601 vanity applications during the month of September. More than 400 of them were filed electronically. Gettysburg processed all vanity applications through August 29, 1997. There were 390 grants and 305 WIPs (work in process). The FCC said it expected to complete WIPs processing for August this week. There's still no word on when Gate 4 will open.--FCC

* AMSAT annual meeting this weekend: AMSAT holds its annual meeting in Toronto, Ontario, this weekend, October 17-19, the first time it's ever been held outside the US. Featured will be more than 25 papers on amateur satellites. One key talk will be a status report on Phase 3D Amateur Radio satellite, which AMSAT now expects hopes to launch within the next year aboard an Ariane rocket. AMSAT was incorporated in 1969. More than 30 OSCAR satellites have been launched by worldwide AMSAT organizations and affiliates. For more information, see http://www.amsat.org/ on the Web.--AMSAT News Service

* League radio spot gets on MTV: Westwood One Radio Network staffer and ARRL member Phil Micari, KB2VOE, reports that the ARRL's radio public service announcement "They're All Hams" ran six times in August during an MTV (Music Television) simulcast concert featuring popular rock group Fleetwood Mac. The spot aired on 100 stations, including those in top markets such as New York City, Chicago and Los Angeles. Micari hopes to get the spot aired again during another concert on November 28.--Jennifer Gagne, N1TDY

* Former Director recovering from surgery: Former Hudson Division Director Richard Sandell, WK6R, is recovering from heart bypass surgery he underwent October 7. He was hospitalized in late September after complaining of chest pains. Sandell also was hospitalized this past summer for gall-bladder surgery. His wife Phyllis, KD2OG, says get well wishes may be sent to Richard A Sandell, WK6R, 441 Central Ave, Box 1367, Scarsdale, NY 10583 (no

telephone calls, please!). Sandell says that he will not be able to reply to e-mail messages for several weeks.--The Hudson Loop

* October QST Cover Plaque winner: Michael Nie, KB8VMX, won the October QST Cover Plaque for his article "The Ohio River Flood of '97." Congratulations, Michael!

* Space ham: Tom Daniels, N3CXP, has been following the space program and Amateur Radio satellites for years. The South Whitehall Township, Pennsylvania, resident recently attracted the attention of The Morning Call newspaper of Allentown, which featured him as "Space ham" in its October 6, 1997, editions, complete with a picture of Daniels in his shack. In the article, Daniels discussed contacting US astronaut Mike Foale, KB5UAC, aboard Mir, as well as some of the challenges of space communication, like Doppler shift.--thanks to Clarence Snyder, W3PYF

* A century of electrons: Dave Finley, N1IRZ, of Socorro, New Mexico, calls the attention of his fellow hobbyists to an article in the October edition of Physics Today. The special edition on "The Ubiquitous Electron" marks the 100th anniversary of J. J. Thompson's paper announcing his discovering of this important entity. According to Finley, a series of articles looks at the discovery and the subsequent multitude of applications that came from this discovery.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

1029. Help - Battery Charger Combo For Shack Supply?

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-17 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01bcdb6e$75d04440$0c8a92d0@bitnet.bit-net.com>
Source record: 188481
Cross-posted to:
alt.home.repair,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I'd like to use a 12v battery with a charger to power my rigs in my
basement "Ham" shack.
I need the setup to keep the battery safe, both preventing explosive fumes
from building up, and to properly charge and monitor the battery.
I'm thinking of putting the battery in either a plastic tool box that I can
lock (I have a very curious and versatile 2 year old) or in a small pet
carrier (I won't have to drill lots of holes for ventilation in the pet
carrier as I would in the tool box).

Questions:

1. What car, marine, etc. heavy duty battery is best?
Critical Specs
or
Specific Model

2. What battery charger should I use to prevent damage to the battery and
to keep it
properly and fully charged - without generating rf noise in the
process (and to
preferably have a reasonably accurate display of the battery
condition).
Critical Specs
or
Specific Model

Thanks for any help! DavidC

1030. ARLB062 WRC-97 Opens October 27

SB QST @ ARL $ARLB062
ARLB062 WRC-97 Opens October 27

ZCZC AG62
QST de W1AW
ARRL Bulletin 62 ARLB062
From ARRL Headquarters
Newington CT October 17, 1997
To all radio amateurs

SB QST ARL ARLB062
ARLB062 WRC-97 Opens October 27

Four items of prime interest to Amateur Radio will be on the agenda when the World Radiocommunication Conference 97 (WRC-97) opens October 27 in Geneva, Switzerland. ARRL Technical Relations Manager Paul Rinaldo, W4RI, is a member of the US delegation to the conference. Others attending include IARU representatives Larry Price, W4RA, Wojciech Nietyksza, SP5FM, and Michael Owen, VK3KI. Representing Canadian amateurs on his nation's delegation will be Jim Dean, VE3IQ, of Radio Amateurs of Canada (RAC).

WRC-97 delegates will discuss the so-called ''Little LEO'' issue during the monthlong session. While the Little LEO industry's preliminary proposals to share 2 meters, 1-1/4 meters and 70 cm generated quite a stir in the amateur community last year, current US proposals do not include any plans for sharing of amateur frequencies. Also of interest to hams is the specter of increased interference on some amateur UHF allocations from Earth Exploration Satellites (EES), used for mapping by synthetic aperture radars (SARs) that are expected to be mostly active in the Southern hemisphere. Amateur radio delegates will make known the needs of our service. WRC-97 will be asked to consider allocating the band 430-440 MHz to EES and upgrading the status of EES at 1240-1300 MHz.

Wind profiler radar systems operating near 50, 449 and 1000 MHz also bear watching because of the potential for interference to Amateur Radio. These systems are used by weather forecasters to look at wind patterns in the higher atmosphere.

WRC-97 delegates also will set the agenda for WRC-99, where the potential exists to establish a worldwide 40-meter allocation. The current US concept calls for a ''harmonized'' band at 6900 to 7200 kHz that would be available to hams around the globe. This would mean hams would shift down by 100 kHz while broadcasters moved 100 kHz up

the band. Yet to be determined is how fixed services would be handled in the realignment. The IARU is committed to the goal of a 300-kHz worldwide exclusive allocation for 40 meters. Right now, only 7000 to 7100 kHz is available in Regions 1 and 3, where broadcasters dominate the upper 200 kHz of the band.

WRC-97 is scheduled to conclude November 21.

That's the point. The compulsion is because it is there being used
by thousands of Hams. The same reason for English--because it is there
in
the system being used. I do not know of anyone who claims that Morse,
on
its own, attracts new converts. It is a simple, easy to use, tool to
explore and experiment with RF communication, without getting bogged
down in complicated
modulation schemes as well as being the second most used mode outside of
voice
on HF.

My friend wants to skip all those areas since he's only interested
in code. Because of his desire, he can't pass the theory exam. Hence
your belief that code is the only pass/fail portion of the exam
process is flawed; passing the code but failing the theory results
in no license being granted.

Well lets see. For one, this is counter to what you and Carl badger
us continually with "those whizbang signals that are so terrific that
machines can make 100% copy even though no one hears them." For
another, this flies in light of the testimony on this very forum
by HF Whizbang mode operators admit that they do not listen to anything,
just see by the flashing or not flashing lights on their MFJ that
the frequency is clear. Why has this come about? I claim that,
in part, it occurs because of your influence in devaluing the
MORSE qso's in the eyes of gullible Whizbang operators to the extent
that it is OK if interference occurs. After all, they are being wiped
out by a more "superior" mode. Why do we have constant pleas in QST
to curb these despicable practices even from international operators
ie. interference of beacons, and weak signal Morse QSO's? Further,
I claim that because of this, HF digital is being slowly relegated to
a pariah mode and is having a chilling effect on its popularity.
How ironic if, because of your influence, digital becomes the "new"
obsolete mode.

I remember traveling to FCC headquarters in Boston as a kid to take the test. There I was, small town kid in big bad Boston in the Headquarters of the FCC ... I was overwhelmed to start!

Then I go into a very hot and sterile room for the code test. The testing person barked out his instructions and started the code - as the code echoed off of the walls in a tone and tempo I had never heard on any test or monitored cw exchange I sat there and never moved my pencil ... disappointed doesn't begin to describe my feelings!

Ayuh, tone and tempo can be critical! I still believe that 20wpm from the start is the best way to learn - you have to learn sound-groups rather than translate individual characters (something one may do up to about 10wpm - which is why so many get stuck at 10wpm).

>
>William R. James
>

Not a fair comparison. CB has 40 channels (only 23 orginally) while there
are thoursands of usuable frequencies amoung the various ham bands. The 70cm
band (442-450-Mhz) alone in 8 Mhz wide. Thats almost 8 times more frequency
space than the entire AM broadcast band. Allowing 15-Khz per channel- thats
over 533 channels!

Are you guys having trouble accepting that someone can. I did. During Field day i was a codeless tech, never tried code before. A week later I was a General with 20 WPM. I learned IMC at 20 wmp during the drive to the testing site. Whether you people belive me or not I don't really care, but what happened is what happened. I've been playing music for many years, where you learn to memorize patterns. It's like second nature to me, and a lot of musicians. When I see notes, I don't even count, I can see the pattern and simply know what to play. Morse code was a lot easier than music. So you you extras that did code for 20 years, I can do it in 2 hours. Belive me, I don't give a squat. But I challenge you to introduce morse to a really good musicaian, and you will be so jelous as to how fast they can learn it you will want to cry.

1042. VHF/6 mtr reflectors

Newsgroup: rec.radio.amateur.misc

Hi,

I am looking for the subscription address to the vhf reflector. Anyone have an idea where that is?

Also, is there a seperate 6 meter reflector?

Thanks,

Joe KI3B

At this point in the sunspot cycle, and from your location, I would expect 40m to be good in the early evenings, and 75/80 to be good mid- to -late evening. During the day you might even find 40m to be of use. When conditions permitt, 10m is very conducive to a strong north-south path. I would suggest that you take some time to read a bit more about the science of propagation. Antenna books can be a source of good info. Try the ARRL's Antenna Handbook.
As to kits, the advice to try TenTec is good. Let me expand to warn you away from the poor quality stuff put out by Ramsey Kits. I might also add that most kits available these days are QRP affairs, have decent receivers, and are for the most part mono-banders.
Somebody in your part of the country will have to fill you in on the ham store situation.

"much" is the key word here, I think. One of the reasons that the inverted V is a popular antenna, aside from requiring less space to erect, is that it combines vertical and horizontal polarization. In that most man-made noise is vertically polarized, you might well notice some decrease in noise. I would also suggest a piece of really old advice, "get it as high as you can." This will not only help the overall performance, but will have the added bonus of getting it away from noise sources in the antenna's near field. Remember that the field strength of eme is inversly related to the square of the distance. Simply put, if you double the distance from a noise source you will quarter the strength of that eme.
So try it as an experiment for your particular QTH. Goofing around with antennas is one of the least expensive good-times to be had in this hobby!

1051. Re: Why do I need a "peak-reading" wattmeter in SSB?

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-17 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19971017014800.VAA06609@ladder01.news.aol.com>
Source record: 188546

The advantage is accurate reading. A "regular" wattmeter will be unable to follow the instantaneous peaks produced by modulation; instead, it will give you more of an average of power. You'll be much more impressed with your power level if you see the peaks!

Martin, K0MB

Not targeted at any specific author, but must we microanalyze everything. If someone wants to use code. MORE POWER TO YOU!!! If not, we shouldn't criticize that person for it. I'm not a proponent of code, I know it, and use it ocasionally. It's ok. That's the fun of ham radio, doing what you like. IF cw is your thing, great, if not try SSB. If you are mute, then maybe CW is the only way. Something for everyone. IF there are not enough people who like cw it will simply die off and nobody will care, but as long as there are people that like it then they will use it, and I don't see a problem with that. Why must we argue everything. The original thread has some value to it. I will usually go agains CW, but in this case I will uphold. I come from a country in europe, and I know that not everyone there can afford neato-spiff $$$$ units that are capable of the neato-spiff things. For a ham threre, and many here in the US, money is a factor. It sure is for me, I have to pay college tutition,and frankly I'm a poor college student yet i ENJOY ham radio with the gear that I'm able to afford. I can't afford a supershack, and don't have the luxury of TNC's AUTO KEYERS, sophisticated bells, and whistles. If somebody can only afford a rig that sends CW, guess what mode they will be operating. Why knock things, that's not what radio is about. If a new ham looked at what is being said un usenet about radio he or she would be surely turnded off. I get out on the air, and find great people who are always teaching me new stuff. I think the most pleasant QSO I've ever had was via CW. My first CW contact in Fact, I was proficient at code, but didn't know all my Q signals. I simply said that I don't know what QTH means, so my reply was "Your QTH is location please" My point is that Ham Radio is in fact fun, and there is no room for arguing what mode is better. If it's fun then it's the right mode. There are plenty of nice and fun people to talk to. It seems like everybody here has some problem with ham radio, like it's just not fun anymore. Seems like eveyone has a problem with no-code techs. In stead of making cracks about them, introduce them to HF, and yo would be surprised how fast they are willing to learn code. MAKE IT FUN!!!! If it's not fun, then what's the point. You would be surprised how many people still love a challenge. Instead of all arguing we should team up, and promote AMATEUR RADIO as a whole, and not just parts of it. I know that when I talk to a strantger that is a ham, there is a bond there. So why split in CODE NO CODE. Team up, and respect all hams, all modes, and you would be surprised how powerful Amateur Radio is when eveyone works together. If you have a chance to show someone a DX contact that has never seen one. DO SO. I found HF, via Field Day, and Love it. I sure learned code FAST!!!!! I wanted to be on HF. The magic of DX is strong as ever it's just that people are giving it a bad reputation. If every COdeless tech was introduced to HF, and even put FRIENDLY pressure on to

get a license with HF, and it was made fun in the process CODELESS TECHS would be only temporary. IF they like VHF/UHF, great, there are so many things to do there. If one specialized in UHF/VHF, they will get good at it, and I have no problem with Codeless techs that are good at what they do and have FUN!!! So lets quit bickering and team up to promote something we all have in common AMATEUR RADIO. PLEASE!!!

We(hams) have exclusive priviledge to very little spectrum. Most is shared with other services, point-to-point being one of the most common. CW is alot less intrusive to these other users, and perhaps that is part of the reason for the CW exclusive segments.

160m: Amatuer radio has only SECONDARY status to the primary radiolocation service. In region 3 amateur radio shares on a co-primary basis with fixed, mobile, and radio navigation

80m:In region 1 we share on a co-primary basis with fixed, and mobile services. Broadcasting is on a co-primary basis from 3.950-4.0 mHz. etc.
It goes on and on.....

>in QST. Their indication was the "typical" ham is an affluent, older
>white male.

Male?

Yes, overwhelmingly. This is a reflection of all technical activities historically being male dominated. But that is changing. There are more females in technical activities today than ever before. A percentage of them might be attracted to amateur radio if it were presented properly to them as an activity where they are welcomed as peers.

White?

Yes, again overwhelmingly (in the US). Again this is an effect of historical patterns. But more blacks and hispanics are joining the middle class, and pursuing technical activities today. A percentage of them might be attracted to amateur radio if it were presented properly to them as an activity where they are welcomed.

The perceived lack of asians (in the US) who are amateurs is more of a puzzle. Many are already middle class, and many pursue technical careers. So the prerequisites for being potential amateurs are there. It may be that they don't feel welcome in a white male dominated activity, particularly one where the white males are older, and perceived to be somewhat redneck and reactionary.

Older?

Most definitely, and this is a serious problem. A demographic crisis is looming if we don't find a way to recruit large numbers of younger people. Half of our current Generals will be SK in a dozen more years. Replacements must be found.

Affluent?

Not unless you consider middle class to be affluent. There are some wealthy amateurs, but they are in the minority. Amateur radio is primarily a middle class activity. The poor generally don't have the funds or the leisure time to pursue a technical

avocation, and the affluent have other more attractive activities
to fill their leisure time.

Perhaps, but how about the receiver? Everyone who says CW transmitters
are easy to build seems to want to ignore the receiver. A good CW receiver
is also a good receiver for FSK. And of course a FSK transmitter is only
trivially different from a CW transmitter. But I have some doubts about
easily assembling either in an emergency. Where are you going to get the
parts? Or the tools? How are you going to power it? Etc. And meanwhile,
you have the problem of digging out of your own personal emergency,
and that will generally take precedence over homebrewing amateur radio
equipment. If you use amateur radio at all in association with an emergency,
it will most likely be because you have prepared ahead of time with battery
powered portable or mobile equipment, and that can be arbitrarily complex.

>Yes, there are more efficient modes. I agree. But for a new ham operator
> starting out, those without the big bucks to spend, they can get a complete
> QRP setup very reasonable, and communicate around the world.

Ditto for many other digital modes, which *are* more efficient. The radio
equipment requirements are only trivially different, and the manhour investment
needed to effectively employ them is much less. This is particularly important
to the new operator who, by definition, doesn't have years of experience with
an arcane manual signaling protocol.

>I don't agree no-code techs are lazy. I have said before and will say again, I
> agree with the concept of a no-code license. I also agree that code should not

> AM, FM, SSB, etc.

Yes, they all have a place, but none of them has an overwhelmingly dominant
place sufficient to have a separate pass/fail exam element all its own.

DIVISIONAL NEWS

AFFILIATED CLUBS CONFERENCE

The next conference of affiliated Clubs will be held at Amateur Radio House on Saturday 15th November. Registration of Delegates and notice of questions and other agenda items are all required by 31st October, so that catering arrangements can be finalised, and so that Bill Vlies, manager of the ACA, who will be attending, can give informed answers to any questions he may have on notice.

The next Affiliated Clubs Net will be held on Sunday 2nd November at 09.00 on 80 metres.

-- submitted by Ken Westerman - Affiliated Clubs Officer

EXAMINATIONS

The next examinations will be held at Amateur Radio House Parramatta on Sunday 26th October 1997. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possible, but no later than 12.30 pm.

-- Eric VK2EFY, Divisional Secretary

WICEN NEWS

Of interest to our various listeners, especially interstate, is a new column appearing in "AR", dedicated to WICEN. Written by your scribe, its objective is to highlight WICEN activities from all over the country, with a view to publicising this little-known but most important part of Amateur radio. To this end, contributions are sought from all regions and divisions, as otherwise all you're going to read about is NSW. Full contact details appear in this month's column; we assume that all WICEN personnel are also members of their local WIA Division, and

receive "AR"...

Another major exercise this month, apart from the Hawkesbury Classic Paddle this weekend, is the annual Bungonia Cave Rescue, run by Mark Cheeseman VK2XGK, next weekend. This is planned to be a full-scale DVR (Disaster Victim Registration) exercise, with co-operation from the NSW Police and the other paid (and unpaid) services, and is excellent practice for operating in remote places. We will be using packet radio, on both HF and VHF/UHF, as well as voice. Please note that for the benefit of those who have attended in the past, quite a few things have changed (apart from the date!); the format of the exercises has changed, and the event is no longer catered i.e. it's "BYO". Again, the contact for

this unusual exercise is Mark Cheeseman VK2XGK; can YOU operate "portable" for a weekend?

WICEN has been asked to once again provide radio communications for the "Ironman Australia" Forster-Tuncurry half triathlon, to be held on Sunday 23rd November. The event coordinator for this exercise is Steve Pettet VK2KXQ, to whom all enquiries should be directed.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6975, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or information they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

A mailing list for those interested in WICEN is available; just send the command "subscribe wicen your-email-address" to the address "majordomo@marconi.mpce.mq.edu.au", and you will receive further information. WICEN (NSW) also has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". These are generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics.

-- Dave Horsfall VK2KFU, President, WICEN (NSW) Inc.

DX REPORT

MONACO - Mike W0YR and Tom N9NC will be on air from 23rd-27th October as 3A7G/homecalls, using CW and RTTY. They do not expect to be active in the CQ WW SSB Contest.

VIETNAM - Look for Yuki JI6KVR activating a new IOTA (Island on the Air) until October 20. 3W6VT will be active from Con Dao Island, which is part of the Con Son Island Group.

OMAN - Mary G0BQV can be worked as A4/G0BQV using CW until October 24. Look for her at 25 kHz up from the band edges.

ST. PIERRE AND MIQUELON - KG8CO, N8CC, K8AEM and W8MC will be active from Miquelon as FP/KG8CO from October 23 to 28. Activity will be on 160 to 10 meters. They also expect to be active in the upcoming CQ WW SSB Contest.

HONDURAS - Sigi DL7DF with other German amateurs will operate DL7DF/HR3 on all bands, including the newer bands and 6 meters. Activity is expected as well in the upcoming CQ WW SSB Contest.

PALMYRA ISLAND - Chuck N4BQW will be actve as KH5/N4BQW on 160 meters from October 17 to 25.

ARUBA - John W2GD will be QRV from October 22 to 27 as P40W. Activity is expected as well in the CQ WW SSB Contest.

CRETE - Look for SV9/G3NYY and SV9/G4VXE until October 21, using on 160 to 10 meters.

TURKEY - TA3J and TA3YJ will be active as YM3SV from October 25 to 31 in celebration of the reconciliation agreement signed between Greece and Turkey in 1930. Look for them on 80 to 10 meters, using only SSB.

CHAD - TT8JWM can be heard on 20 and 17 meters using RTTY and other digital modes.

SOUTH ORKNEY ISLANDS - Look for club station LU1ZA on 20 meters at 0100z. His length of stay is unknown.

-- ARRL DX Bulletin 44, dated 16th October 1997

SPACE NEWS

Dr. Andrew Thomas, the only Australian-born members of NASA's astronaut team, will spend four months aboard Russia's Mir space station from next January.

The Adelaide-born engineer will be the seventh, and last, American citizen to live aboard the 12-year-old station. Dr. Thomas was originally only the back-up for the mission, but after an earlier NASA crew member was forced to drop out the resulting reshuffle put him in line for the last

flight under the joint US-Russian program.

--Sydney Morning Herald

Meanwhile, the Sputnik replica, which was due to be hand-launched from Mir on the 40th anniversary of the original Sputnik satellite, is expected to be "shoved out the airlock" by tomorrow, if it hasn't been launched already. Last week, AMSAT officials suggested that the launch would take place between the 18th and 20th. Listen out for those "beep beep" noises on 145.8 MHz. The replica should follow the Mir space station initially, so you can use the Mir Keplerian elements to track it.

For more information, check the Sputnik on the VK2 Division's home page in the "What's New" section.

HIGH POWER NOT WELCOME ON OSCARS

B.J. Arts, WT0N, who serves as an Official Observer says that he has received many complaints about satellite operators running excessively high levels of transmitter power within the uplink passband of Amateur communication satellites. Recently Arts observed stations on FO-20 running enough power to be much stronger than the beacon signal. In one case, two operators, who were in contact with one another, were causing Fuji Oscar 20's AGC to block out all other incoming signals operating with normal levels of transmitter power.

Arts says that satellite users should make certain that their downlink signals are no stronger than that of the beacon transmitter. He says that excessive levels of uplink power prevent other users from equally sharing the satellite's transponder. Arts says that it only takes several watts of transmitter power to make contacts through low-earth orbiting Amateur satellites. If ground stations have difficulty hearing their uplink
signal then a significant upgrade in receiver sensitivity may be in order. Raising transmit power levels will just make the situation much worse for all.

CLUB NEWS

WESTLAKES AMATEUR RADIO CLUB WILL HOLD ITS ANNUAL FIELD DAY ON SUNDAY 2ND NOVEMBER 1997. ALL OF THE USUAL ATTRACTIONS WILL BE THERE -

PRIVATE TRASH AND TREASURE SALES
TRADE DISPLAYS
CONTESTS
COMPETITIONS
FOX HUNTS
BARBECUE. LUNCHES
AUCTION,
AND THE BEST OF ALL, ADMISSION IS FREE.

PLEASE REMEMBER THAT WESTLAKES FIELD DAY WILL BE HELD AT THE CLUB GROUNDS IN YORK STREET TERALBA ON SUNDAY 2ND NOVEMBER 1997. THE GATES OPEN AT 9AM

-- SUBMITTED BY BRYSON VK2VV CLUB SECRETAR

ORANGE & DISTRICT ARC

THE ORANGE CLUB WANTS TO THANK ALL SIXTEEN OPERATORS WHO ATTENDED THE 24-HOUR HORSE ENDURO COMMUNICATIONS EXERCISE AT WOODSTOCK ON OCTOBER 5TH AND 6TH LAST.

LETTERS WERE MAILED LAST FRIDAY TO ALL WHO TOOK PART, PERSONALLY THANKING EACH PARTICIPANT IN THIS VERY SUCCESSFUL COMMUNICATIONS EXERCISE, FOR THE SIGNIFICANT SACRIFICE THEY MADE OF MOST OF THEIR OCTOBER LONG WEEKEND

THE NOVEMBER ISSUE OF ODARC NEWS WILL CARRY A STORY ON THE EVENT AS WELL AS THE TEXT OF THE LETTER OF APPRECIATION FROM THE PRESIDENT OF THE LACHLAN RIDERS CLUB INC, WHO HIGHLY PRAISES OUR WORK.

WELL DONE, ALL YOU GUYS!

-- Peter Carter VK2ETK, Event Co-ordinator for the Orange Club

ACCA

The Australasian Communications and Computer Association (incorporating AMUS and SPARC) will hold its October meeting at The Crows nest Club, Hayberry Street, Crows Nest, on Monday 20th, (tomorrow), the topic will be Antenna Tuners, and discussion will be opened with a talk by John VK2AUI, on the design and construction of commercial and Amateur units. The meeting opens at 7:30 pm; the group usually meet from 6:30 to start with a meal, a glass and a chat. All welcome. Parking in Hayberry Street or under the Club building.

-- John Innes VK2AUI

HORNSBY & DISTRICT ARC INC.

The next meeting the formal monthly meeting will take place on Tuesday 28th. October, in the Mount Colah Community Centre, Pierre Close, Mount Colah. (near the eastern entrance to the railway station.) at 8:00 pm. The guest speaker for, the evening will be Dean VK2TJY., the talk, will be on Internet, and assisted by peter VK2XZP., as there will be a demonstration to accompany this talk. ALL ARE WELCOME.

The Club net is every Monday night using the Club call sign VK2MA, through the Club repeaters VK2RNS. and VK2RAT. The frequencies are, 147.250 with a positive offset, and 439.975 with a 5mHz negative offset. All are welcome to join the net, and listeners tune your receivers to 147.250 or 439.975. Yes! we would like you to join the net, or come along to one of our meetings, you will be most welcome.

If you would like to know more about the Club, or its activities write to HADARC., Post office Box 362., Hornsby 2077., or phone John VK2WRT on 9807 2490 again 9807 2490.

BROADCAST ROSTER

Next Sunday, 26th October, 1997

Morning:
Announcer: Pixie VK2KPC
Engineer: Eric VK2EFY

Evening:
Announcer: John VK2FRJ
Engineer: Peter VK2EMU

If you would like to submit a news item for inclusion in the VK2 Divisional broadcast, please send it to us by one of the following

means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au (NB new address)

The deadline for submissions is 2pm on the Friday preceding the broadcast; if sending by packet or Internet, please allow for forwarding delays in the network.

If sending printed copy, please double space your text, leave wide margins, and use a plain font such as Arial or Helvetica for clarity. Please proofread your text, check your grammar and punctuation, avoid using shorthand and abbreviations, and use the exact words you wish the announcer to say on air. Remember, the more care you take in preparing your news item, the better the announcer will read it.

I would like to thank you all for the kind and encouraging words. I am going to chattanooga on the 25th and take the test for tech+. I even got a response from a fellow at arrl HQ (very impressive). The good responses far outweighed the bad. I guess the true test will be to see whats on the air. I did have one guy call me an idiot though. Oh well, I guess he must still be stressed out from his air traffic controller days in the service ;) I was in the service too. he being a lifer I will not be offended by his childish response and will just consider the source. Thanks again.

I don't know where you got your information from, but it's wrong. It is
illegal to listen to cellular phone calls (as well as cordless calls,
and some other types of transmissions).
The two people you refer to *were* prosecuted, and fined.

The problem with the law is that it is flawed on two counts:
it's next to impossible to enforce, and it ignores physical reality. Our
congresscritters are not concerned with either, as long as they get their
money for re-election.
How can we change this? One word:
VOTE!

>from your house wiring.

I have a Magnavox 13" TV receiver that causes interference on WLW-AM (700 KHz)
when the cable wiring is connected. My VCR and console Zenith do not cause
this problem. Only the Magnavox (PR1316C). Even replaced the set with a
new one... same problem. The interference occurs at 700 KHz and is observed
as a 60 Hz hum on the station audio. Adjacent stations do not have this
problem. MediaOne and Dayton Power & Light had no solutions for this.
I can sniff the signal with a portable and get the maximum interference
when I am in the vicinity of the CATV cable shield. My car picks it up as
I pull into my garage as I run under the cable routing in the attic.
Any suggestions? The cable is grounded through a copper grounding rod
outside the house and the AC is grounded to a copper water pipe entering
the house through the concrete slab. It also seems to be somewhat
depenedent on the moisture content of ground.

Here's an interesting question/problem.
I have a Sony cordless phone, model SPP-AQ25. I also have a Kenwood TH-22AT handily held(HI,HI). The phone is copyable on 2 meters with no problem on frequencies that are what I'd assume to be second harmonics(49*2=144-146). The transmissions from the handset to the base(I assume the handset is sending to the base, because I am hearing whomever has the handset) are copyable full quieting. This even blocks out repeater courtesey tones, and other stuff. I've called Sony's customer disservice number for help 3 times, and I get the standard response of, "I'm sorry sir, but you can't be hearing the phone as it operates in the 49 mhz range" I don't even bother trying to explain harmonics to the rep. One even dared to say that what I was doing, by being able to copy the phone, was illegal. What do I do, short of a 20 pound sledge hammer?

NOT so at all.

>The segment used 26.965 to 27.405 MHZ was a part of the amateur radio

And once the FCC allocated it away from ham radio it was
no longer subject to the treaty requirement which ONLY
impacted hams. Thus, the new CB service was NOT in violation
of the treaty.

That article was pathetic. It was inaccurate, incomplete, and
misleading. But then, QST has always been too little and too late
when it comes to reporting on packet radio.

>Actually the *primary* reasons for any decline in HF digital, if, in

>is capable of working well in the HF environment ...

I submit that the most important reason by far for the decline of
packet is the refusal of hams to coordinate and cooperate with each
other. It's pretty hard to run any sort of net, even at archaic
speeds, with every other node and BBS run by a Lockout Lid. The
beginning of the end of the regional packet net was when TheNet added
callsign lockout capabilities to the node firmware.

>understanding a very limited set of words, and if you've ever listened
>to air to ground traffic, some of the pronunciation is not very standard.

Ahh yes. Overheard the following on Socal approach the other day:

King Air 123: (badly mispronounced aviation "English")

Socal Approach: Aircraft calling, I cannot understand you, please repeat.

King Air 123: (repetition of badly mispronounced aviation "English")

Socal Approach: Aircraft calling, I still cannot understand you.

King Air 123: (yet another repetition)

Socal Approach: Aircraft calling, stay out, repeat stay out, of Class B
airspace. You are not repeat not authorized to enter. Don't come back
until your English improves.

And as pilots know, the worst aviation disaster in history, Tenerife,
was caused by a Dutch pilot misunderstanding the Spanish tower
controller, both speaking in non-native English. Enjoy your next
international flight!

>I also note that ATC is slowly going digital with instructions and the like
>being sent digitally automatically. Already most position reports aren't
>done verbally, although for safety, one would want verbal acknowledgements
>on some commands.

I believe most of the automated reports are on company private downlink
channels for business and fuel efficiency management, but that ATC still
demands the verbal communications for traffic control purposes. Still,
no reason why the system couldn't be extended - that *was* one of the
purposes of Mode S transponders.

>Morse code is also not a language, while there
>a limited number of Q signals, I suggest that you couldn't for example
>state that you have to go now because your dog has to be walked

>understand English or some other common language that you also
>speak.

Yes, try to find the Q-signals that say you've got "three critically injured folks, two of whom have serious infections and are becoming gangrenous, the bridge is out, and when is the med-evac chopper coming?" It isn't there, can't be done. For that matter, it seems so much plainer to say:

"Socal approach, Mooney 123 is declaring an emergency, total loss of engine, vectors to nearest airport needed now!"

Rather than:

"... --- -.-. .- .-.. .- .--. .--. .-. --- .- -.-. ....
-- --- --- -. . -.-- .---- ..--- ...-- .. ... -.. . -.-. .-..
.-. .. -. --. .- -. . -- . .-. --. . -. -.-. -.-- --.--
- ... - .- .-.. .-.. --- ... ... --- ..-. . -. --. .. -. .
--..-- ...- . -.-. - --- .-. ... - --- -. . .- .-. . ... -
.- .. .-. .--. --- .-. - -. . . -.. . -.. -. --- .-- .-.-."

>Third, speaking English is presently a safety issue for airline
>pilots and traffic controllers, can you truly say that someone who doesn't
>know morse code presents a safety issue?

Since pilots are often pretty conservative, belt and suspenders, types when it comes to flying; you'd think that they would learn Morse in droves if it were really useful. The only pilots I've ever met that knew Morse, were hams first. Generally, the reaction of the CFI's or examiners are amazement that they've met someone who actually knows it, they then tune a VOR to a station, ask for an ID, look at the symbol balloon on the aviation chart that has the code printed right on it and nod their head. This takes about 10 seconds of a 90 minute instrument checkout; the rest is flying. Without knowing Morse, you would be expected to do what he did. Total advantage, hardly even a brownie point.

>Fourth, learning to
>communicate in English at least begins to train the pilot to communicate
>with other people who speak English, just what does morse code
>train a proficient ham to do besides use morse code? Morse code as
>we know it was an accident, or at least decoding it by ear was. It
>may have seemed fun, but why can't morse code attract new converts
>by the thousands without compulsion?

Some are quite open in stating that it is there to exclude people. This comes under a variety of code phrases like "ham radio isn't for everyone" or "we have to have standards" or "what do you want, CB?". This begs the question of the fairness, desirability, and nature of the exclusion, but they're satisfied.

>If code is fun or useful then its

I see all these messages about morse code or no code. I believe the rules now state you need code. I haven't learned it yet, but plan to. I have more of a problem with the crap being spoken on the low frequencies. There are a few hams that consistently sound like the are talking on a CB. I shut off my radio when my kids are in the room. And they consistently call it a gentlemens frequency. If this is what we are all trying to learn code for, lets just bootleg with CB's. Why not clean up our act a little and make these bands more attractive to new amteurs and then see who learns code. When was the last time a station was shut down for cursing? When was the last time you heard that kind of language on 440, 2 or 6 meters?

Hey There,

I am the proud owner of the Standard c181 handheld tranceiver!

Would please advice me?

How do I switch off the (ctsc???)-tone when I am using the
frequency-shift (offset and rpt?
What is the output power of this tranceiver?
What is the maximum operation voltage (6 or 12 or 13,8Volt)
Is there an adaptor availlable for 12Volt car voltage?
I would like to have a copy of an owners manual is that possible?

1080. Ultimeter 2000 Logging

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-18 00:00:00 UTC
From: Alan Foley <axel@indigo.ie>
Message-ID: <3448B192.33ED@indigo.ie>
Source record: 188425

Attached is a copy of a message sent to Peet Bros., regarding the
Ultimeter 2000 weather station, anyone got any ideas?

Alan.
EI3EBB

Sir,
I`ve recently received an Ultimeter 2000 unit,unit works very well
but with one exception that I`ve been unable to solve.
I`d like to use the `Complete Record` mode for data logging as it
provides wind speed peak etc., and I may export log to Excel at a later
stage, overall this seems to be the most versatile mode.
`Logger` mode does not give any indication of peak wind speeds.
Problem as follows:
>> `Data Logger` mode works fine but is limited (no peak w/speed) etc.
>> `Packet Mode` appears to have info required but PC times out because
of 5 min delay and program crashes.
Which leaves `Complete record` mode.

> If `Winult` is run in any other mode other than `Complete` and then keypad is used to
change to `Complete Record` mode, all data is visible in monitor window. (ie all 448 hex
digits are sent to the PC, there is constant ouput from the unit), but of course the s/ware
at this stage does not recognise the output since it is expecting a different mode.
However,if `Complete Record` mode has been selected and `Winult` is
run the following happens.
The software recognises that `Complete` mode has been selected and
verifies same, but all 448 digits are not sent.
It appears that about 40-50 digits are sent, output appears similar
but not identical to that of `Data Logger` mode, I`ve verified this by
viewing output on a text editor.
So in a nutshell........
1. Complete record mode outputs all data when a different mode has
been set-up in `Winult`.
2. If `Complete record` mode is selected initially, the output
appears to be (chopped), unit does not output continuous data,outputs
every 3-4 seconds.
Note: header starts with &CR&, which I believe is correct.

Im sure there`s a simple answer to this but if so I can`t find it.
I`m running Win95 on a P75,32mb RAM, Winult and Ultimeter 2000.
If you have any information that may help I would appreciate it.
Many thanks for taking the time to read this message.

Good idea about putting the batteries in a child proof container..

>Questions:

>1. What car, marine, etc. heavy duty battery is best?
> Critical Specs
> or
> Specific Model

About any (good condition , of course) 12Volt battery would work
but when you say "best" then I would suggest two (2) 6-volt deep cycle
golf cart type batteries. There is typically only one size, so when
you find "golf cart type" battery, there is only one size, but can be
manufactured by many companies. Connect them together to acheive 12
-13.4 volts. I got mine from Sams Club for $35 each. I have also
used a little $16 , 12 volt garden tractor type battery to power my 50
watt 2 meter rig with success. If you can not find golf cart types,
then any "deep cycle" 12 volt battery would be my second choice.

>2. What battery charger should I use to prevent damage to the battery and
>to keep it
> properly and fully charged - without generating rf noise in the
>process (and to
> preferably have a reasonably accurate display of the battery
>condition).

I would suggest getting a low amperage input model, say 3-4 amps,
maybe 6. Again, Wal-mart, Target, Sears, ect handle these at
reasonable prices.... This charger would simulate a solar powered
setup and if left on 24 hours a day should provide plenty of power to
recharge those 2-6 volt (now 12 volt) batteries mentioned above. I
would strongly suggest you get a on-off timer to be placed between
electric wall outlet and the battery charger. I found an excellent

one at Grangers ($25) that can be set in half hour increments for the full 24 hour day. The timer controls the battery charger so you do not overcharge or boil the batteries. Of course, you will have to experiment a little to find out how much time the charger should be on to maintain your batteries. Last item is a volt meter to gauge the charge of the battery(s). An el cheap-o handheld type ($9.95) will do , and is much better than anyting that would come on a battery charger, or you can hard wire it in and have the face of the meter facing you for ease of monitoring. With this, you can regulate the timer-battery charger better. Suggestion, have the timer-battery charger come on when you are not in the shack so you do not have to worry about rf interference.. The batteries will have or should have enough storage capacity to operate without the charger being on... Depends then on what battteries you go with, right?

I have obtained a quantity of coaxial cable and am trying to find a good use for it. It is Belden 9207 Twinax------100 ohms-----2 conductors-----.330 inch dia. My question is: What effect on impedance, if any, will tying the conductors together have? Will that halve the impedance value? I think it would make good feedline for a scanner, somehow. Thanks to all.

Nice to see you finally figured out how to use a mix of lower case and upper case characters ... it makes your posts easier to read ... but no less illogical ...

You assert that I am "Not an unbiased source of information" "because I use terms such as 'hazing' to describe the outdated, irrelevant Morse test" and "advertise joining a no-code group."

I fail to see what this has to do with buttering bread and why anyone would butter someone else's ... and what buttering bread have to do with ham radio?

Besides, you turn right around and use your "KNOW CODE NOT NO CODE" rhetoric ... so by your "rules" you are not an "unbiased source of information." (as if I didn't know that before ....)

I never claimed to be "unbiased" ... of course I am biased against the irrelevant, outdated, harmful hazing ritual that the Morse test represents ... it keeps man highly qualified people from joining our ranks and sends the wrong message to the public and the regulators ... that message being essentially "Hams are a bunch of backward people,

lost in the past. who value telegraphy skills above all else."

My call is KB0zkz. I'm a general class license. It took me many years to learn how to play music. It took me a couple months to type. It took me a couple of hours to learn code. If you guys ever got out of your shacks, you would see that what I did is nothing special.

I would have e-mailed my call, but obviously you don't give your real e-mail address. I'm on the computer database. I'm not in the call-book as I have not been a ham a year yet. Oh wow, and I know code that fast.

Like I said I don't care whether you guys belive me or not, but it's not some magical skill. I've seen it done.

Besides I'm sick of arguing with you people. Read my post on rec.radio.amateur.policy under AMATEUR RADIO!!!!FUN!!!!. So If I have offended anyone with my post I appologize. I did in fact learn code that fast. And honesty, I thought you people knew that it can be done in a short amount of time. Did't know you guys would get so upset. Sorry. But it's true.

John,

One thing you can do is to purchase the AD1-K and the AD1-Y that Heil puts out.
One if for Kenwood radios and the other for Yaesu radios, respectively. Then
all you do is plug and play.

Carl, Carl, Carl...

Only 27% of HF hams use CW regularly.

What percentage of HF hams are ACTIVE HF hams?

Well?

If it's 35%, then 80% of ACTIVE HF hams use CW regularly.

My poor little Buddy dALe Clark. I don't run a childporn ring....in fact it, and you disgust me. I also don't impersonate women, but I hope that doesn't break your heart. You're saying these things does not and will not make it true. Your blatant need for attention in ng's is obvious by the fact that you again felt the need to change the header..... Leave the light on....

Code is important! I know, I have a no-code license, but I'm working on the code. It's just a little hard, you know! I think hams who call code BS should be yanked off the air!

So do bongo drums to some folks, but that would not "justify" making
them a licensing requirement for access to HF ...

> What DOES tick me off are the complainers! The simple fact is that code
> IS REQUIRED if one wishes to have HF priviledges.

We realize that and are attempting to debate the issue and effect
changes in attitudes in order to get the rules changed ... nobody
is advocating lawlessness ... just a change in the rules to align
ham radio better with today's world before it becomes so stodgy and
outdated that it no longer can justify its own survival.

> Gripe, complain, bitch
> or moam. It doesn't change that fact. Some things take a little time,
> and more importantly, a little WORK.

There's that "work ethic" thing again ... why are so many older, coded
hams so intent on insisting that "you have to work for it"???

I am interested in seeing major, desperately-needed improvements in the
technical competency of the average ham (which pretty much sucks right now),
but I don't give a DAMN if someone "has to work for it" or not ... if every
electronics engineer in the world walked in tomorrow and took and passed all
of the written tests up through extra, that would be great and we should give
them licenses with full HF privileges ... and I, for one, would not
give a damn that they didn't "have to work for it" because they already
KNEW the radio theory ... in effect, they "paid their dues" long ago ...

> Most everyone can drive a car, you
> just have to have a license to do it legally.

Yes, but you don't have to saddle and ride a horse as a part of the test.

> If the international
> committee decides to drop the cw requirement, then so be it.

First ... it is not up to the IARU committee ... it is up to the ITU.
(It's up to the world's government, not the world's hams.)
That is all we are trying to accomplish ... to burst the Morse Myths
that have caused rampant stagnation and to influence opinion to the
point where we can get the necessary changes to the rules. This is
essential for the long-term survival of ham radio ... but too many

older hams (not all, but too many) seem to figure "Ham radio will survive for a few more years, no matter what ... what the hell do I care what happens after *I'm* gone?"

> I and many
> other hams will still be using an old, outmoded, slow

FB OM ... have fun ... just don't insist that everyone *must* have the same tastes and interests as you ... the world has changed a LOT (in technology, I think, clearly for the better) in the past 37 years. Just allow some modernization so ham radio can catch up to the world, please?

> (if you can call
> sending/receiving at 64 wpm on a mechanical bug slow - try typing that
> driving down the road) mode of communications.

That is, admittedly, "blazingly fast" ... FOR OOK MORSE ... but it is painfully slow compared to what could be done in the same bandwidth, with less power, using better methods ...

> That's what makes a hobby
> enjoyable. Being able to do your own thing, without having some
> snot-nosed wipper-snapper griping that it's OLD FASHIONED. You do your
> thing, I'll do mine.

That's all we're asking ... nobody has suggested that you should stop "doing your thing" ... just that you not insist that *everyone* be forced to "do YOUR thing." Some of us "wipper-snappers" (hell, I'll be 47 in a few days, I'm hardly a "wipper-snapper" ...) would like to be able to "do OUR thing" without having some cranky olde farte griping "that's not the way we did things in 'the good old days'." (your argument cuts both ways, but you seem to want to only apply it in your favor ...)

Fair is fair ... we are willing to respect your right to pursue your interests ... why can't you offer the same courtesy and respect to those of us with more modern ways??? ... the ham bands can easily support BOTH of our interests ...

>any problems.

I concur. The less "organization" the better. Organization only
leads to problems down the road, in most cases. It may be a good idea
to incorporate as a non-profit organization for tax and liability
purposes. This is trivial and inexpensive in most areas.

Another way is for one (or a few) people to own and maintain the
equipment, with labor, parts, and money donated by those who use it.
This way, there's little or no problem with ownership. A repeater is
so cheap to build nowadays that this should not be a problem. Site
rental, permits, and power may be a bigger problem, but this is
something that can't really be passed on to others, anyway, since it's
usually an ongoing expense and not a capital asset.

Bottom line is that technical projects do NOT lend themselves well to
voting or democratic consensus. I learned this the hard way, so now I
just donate, buy it myself, or help other people.

Hi Robert
I have read many messages similar to yours and I have had many
discussions, at work, pertaining to the same subject.
Unfortunately, amateur radio, and society have both changed. I,
personally, believe that the garbage being allowed on cb has made its
way, not necessarily by the same people, to the amateur radio bands.

On reason that I am so strongly in support of the code requirement on
amateur radio is that cw seems to bring out the niceness of amateurs.
If you have your cw priveledges, or can get them, please give cw a
try. Not for the arguements given in the code/nocode debate but for
the reason that, I believe, that the attitude on the cw bands is much
better.

Ya know, a lot of people have told me that the one reason they don't
want to be on the internet is because of the 'X rated' websites. I
have found that I only seem to bump into the xrated site when I
deberately go looking for them. In the same way, that if you
deliberately go looking for the bad stuff in amateur radio you will
find it and if you deliberately go looking for the good in amateur
radio you will also find it. I still believe that cw will help you
find the good in amateur radio.

> >
>
> > However, when one
> > listens with a narrow-band receiver to a portion of an SS digital signal
> > sent in a wide bandwidth, one is listening to only a portion of the
> > transmitted signal, not ALL of the power sent.

Depends on whether you're talking DSSS or FHSS ... in DSSS, the signal
is, for all intents and purposes to the narrowband user, spread over
a wider bandwidth in a virtually continuous manner and simply "looks"
like more "white noise" ... in FHSS, the signal will have NO effect on
the narrowband user for the majority of the time, then appear as a very
short burst of signal in the narrowband user's passband ... has nobody
ever heard of a "noise-blanker"?

In other words, a 1W DSSS signal spread over a 1MHz (main lobe, null-null)
bandwidth would have a spectral power density of *about*:

(+30dBm - 60dB spreading ratio) = -30dBm/Hz

at_the_transmitter_output_connector ...

I say "about, since only about 90% of the total energy is contained in
the main lobe and the side lobes can be suppressed by bandpass filtering
with little impact on performance.

So if the "victim" receiver has a bandwidth of 2.0 kHz ... a reasonable
"round number" approximation for SSB, for example, the total power that
would fall within that receiver's bandwidth would be *about*:

(-30dBm + 10log(2e3))=(-30dBm +33dB) = +2dBm (about 1.6 milliwatts)

at_the_transmitter_output_connector ...

Given propagation losses, that DSSS station would have to be *quite*
close to a narrowband receiver to even come close to "rendering the band
useless to" the narrowband receiver, as some assert would be the case ...

> > It would not be
> > surprising that it is cannot be "detected" by ear.

So where's the problem? ... if you can't hear it, it can't possibly
cause you harmful interference ... and if it increases the capacity
of our bands and allows greater sharing and frequency reuse, you
should be jumping for joy ...

> > If that same signal
> > had been sent using the same total power in the minimum necessary
> > bandwidth for the data rate employed, it would be quite detectable by ear
> > in a receiver of the appropriate necessary bandwidth.

And would thus interfere with another narrowband user using that same narrowband channel ... the unhearable DSSS signal would NOT interfere under the same circumstances ...

Now, bear in mind that I am NOT saying that DSSS "can never cause ANY interference to any narrowband user anywhere" ... clearly it is possible but the likelihood has been grossly exaggerated by those who fear what they don't understand ...

> > If I understand
> > this all correctly, the actual total power advantage to spreading is as
> >
^^^^^^^^
> > much as 1.6 dB, and this is not always realizable in practical systems.

The advantage is in increasing the *total capacity of the band* by making users "look" like very low-level "white noise" to others ... SS's main purpose is not to gain an advantage WRT power transmitted, but to use the channel in a more effective way to avoid interfering with others or being interfered with BY others ... or, in the military case, to "hide the signal in the noise so it's hard to even notice that it's there ..."

All of the above pertains to DSSS systems ... FHSS (frequency hoppers) are different ... at each hop, they behave essentially like a narrowband system ... but they don't stay in one place long, so the average power that they place in a narrowband channel is low ... it depends on the PSD (power spectral density) of the signal *as a narrowband signal*, the bandwidth of the "victim" receiver, and how often the spectrum of the hopper overlays the bandwidth of the "victim" receiver ...

> Ed, please do not take this wrong as I enjoy your postings.
> How much spreading is required or is the width relevant with regards
> to overcoming fading, noise, etc.?

The advantages of SS are directly related to the spreading ratio ... which is, basically how much total bandwidth does the system use.

> It seems to me that unless most
> of the spectrum users, amateur, military, and commercial switches from
> narrowband to SS simultaneously that spreading, even just an octave,
> would be unworkable.

A large portion of the military's communications *already* use SS of one form or the other ... and commercial use is growing by leaps and bounds ... hams alone, lag behind ...

Besides, we are not talking about sharing spectrum between the military, commercial users, and hams ... so what they do in their bands won't have an adverse effect on us ... EXCEPT by making us look all the more backward

and outdated ...

> Was the 900MHz SS success due, in part,
> that there was little else there to begin with?

There were (a few) hams, AVM (automatic vehicle monitoring) and a host
of narrowband analog and digital Part 15 devices ... 900 SS did NOT
"inherit virgin spectrum" by ANY means ... SS simply provided a reasonable
mechanism for the FCC to permit higher power levels (which permit increased
range) for unlicensed consumer devices ... SS will let more uncoordinated
users coexist (with higher power and greater range)in the band with less
mutual interference than narrowband techniques ...

Mike, just a small piece of advice here, because these kinds of things can cost quite a bundle: see if you can find the velocity factor of your cable. This really shouldn't be all that great a task, and might even be easy to do.

Make up some reasonable connector (generally using compression fittings). There are articles on this out there.

And just make your cable run to the antenna an EXACT multiple of an electrical half wave. Impedence doesn't matter as long as you get that right.

Good luck to you!

>English is no longer required. Like to take a ride on that system?

Your analogy fails on several fronts. One, airline english only requires
understanding a very limited set of words, and if you've ever listened
to air to ground traffic, some of the pronunciation is not very standard.
I also note that ATC is slowly going digital with instructions and the like
being sent digitally automatically. Already most position reports aren't
done verbally, although for safety, one would want verbal acknowledgements
on some commands. Morse code is also not a language, while there
a limited number of Q signals, I suggest that you couldn't for example
state that you have to go now because your dog has to be walked
using Q signals or even communicate with another ham who doesn't
understand English or some other common language that you also
speak. Third, speaking English is presently a safety issue for airline
pilots and traffic controllers, can you truly say that someone who doesn't
know morse code presents a safety issue? Fourth, learning to
communicate in English at least begins to train the pilot to communicate
with other people who speak English, just what does morse code
train a proficient ham to do besides use morse code? Morse code as
we know it was an accident, or at least decoding it by ear was. It
may have seemed fun, but why can't morse code attract new converts
by the thousands without compulsion? If code is fun or useful then its
future even if voluntary is assured. I note for example that motorcycles
which require different operating skills still attract new riders and
new motorcycle design. People learn to ride bicycles or even speak
a foreign language, just what besides getting HF privileges does learning
code give a new ham?

I tried but even Jim up on Kauai couldn't see 'em, let alone the hams
on the other side of this island. But I guess if they did work, and
about half the worldwide QSOs were being done in that manner, it
would be a good idea to provide a test for smoke proficiency.

> ear but nonetheless there whizbang modes".

Not at all ... you'd be hard-pressed to cause serious interference
to one of those "undetectable by human ear but nonetheless there
whizbang" signals. As Gary has related, quite a few OOK Morse ops,
apparently pissed at having to share "their" bands with other digital
modes, frequently *try* to jam digital modes ... with little success.
From what I've seen, most of the digital ops find it quite humorous
and chuckle at the frustration the LIDs must feel when their feeble
attempts at jamming are so unsuccessful ...

> It also appears
> strange in the light of the preponderance of confessions of
> digital operators here on this very forum that they seldom listen
> with the ear but just observe the lights on their [brand_x] modem to
> determine if someone is there with another digital signal.

Where did you read this? However, any decent digital controller
should be able to recognize the presence of significant signal
energy in-band without the operator having to listen by ear.

If/that some outdated/cheap_to_begin_with ("cheap" here being used
as "cheesy", "inferior", etc.) device is not capable of that, it
really should be deemed unsuitable for use, relegated to the
scrap heap, and replaced with something decent.

> If it is difficult for you to grasp these concepts then you should
> do more Morse OOK operating on the HF bands.

I'll let Gary choose whether or not to repeat once again, his long
history of OOK Morse usage ... myself, I've used Morse quite a bit

and found it brutally awkward and painfully slow ... I decided it
was not worth *my* effort to continue its use when far better things
are available ... however, if *you* want to use it, that's fine by me.

> It is these very
> whizbangers who have decided upon their own, or have been persuaded
> by folks like you, that Morse QSO's on HF have such little
> value that they can be interfered with at will.

Not at all ... I would never condone any mode/operator feeling like
they could "interfere at will" with any other mode/operator ...

> These attitudes
> have so stigmatized digital operation on the HF bands that those
> modes have become an operational pariah and are declining in use
> (or becoming "obsolete" to borrow your logic). (see Oct QST).

Actually the *primary* reasons for any decline in HF digital, if, in
fact, there even *is* such an alleged decline, would be the fact that
HF packet SUCKs, too many hams art stuck with crappy "TNCs" that are
outdated, too many hams are too technically ignorant to understand the
benefits of *better* digital modes, and too many hams are too damned
cheap replace that crappy, outdated TNC with something that actually
is capable of working well in the HF environment ...

Next time you're in L.A. listen to 147.435 MHz to get an idea of what happens when just a few dozen people crowd a portion of the spectrum. What a nightmare if an entire band was proportionally that crowded.

I've trimmed rec.boating, and rec.video, and the two scanner groups from the header, Glen - hope you don't mind...

Do you have a rebuttal here, or just some snide sarcasm?

>Or could it be that Carl has never had a weak signal QSO slam dunked
>by a Kilowatt Digital station on 40M?

Hmmm... We constantly hear that Morse is a superior mode, capable of handling all sorts of interference with simple equipment under adverse conditions? So why would a mere KW digital station hinder this intrinsically superior mode? And if the KW station op could, by some chance, copy Morse at 40 WPM, would that somehow prevent him from squatting on "your" frequency? Is it possible that Mr DKW can't even _hear_ your feeble signal, and so doesn't know he's interfering with you?

Sheeesh, indeed. If this is the best arguments for mandatory Morse testing you folks can come up with, you might just as well pack it in.

Scott,

I am not sure that the survey is really realistic myself, THe conditions are pretty awfull right now, I am usually quite an active operator on HF however, the last two or so years has been really bad on HF so my gear is mostly collecting dust. I have done some CW but due to cdx I can't remember the last phone contact. Maybe the ARRL should wait a couple years and poll the HAMS again. I'll bet the results will be different.

On the internet? I doubt that John.

The reason for the seemingly endless "debate" (polemics, really) is that some of us realize that the HF phone bands will be lost because the only current beneficiaries of these bands are a bunch of old guys, in spirit if not in body, whose only skill is pounding out 13 wpm.

The arguments that these guys make for keeping the code requirement are really pretty lame:

The last transmission out will be by code (The Tom Hardy Radio-Boy Argument); (We all know the last transmission out will be by cellular telephone);

That morse saves spectrum, (Okay but when was the last time that these guys had anything to communicate anyway, besides how well they were coming in; which antenna works better for them and the date of the next hamfest or fox hunt);

That ham activity is necessary for research and development, (By these guys? They can't even count votes much less solve systems of non-linear differential equations.);

That code is necessary during tornadoes, hurricanes and other emergencies. (Tell it to Channels 2, 5, 7, 9 and 32 who have their satellite trucks at the emergency site).

John, it comes down to the old Greek word: hubris!

Because of Hubris, all of the bands lower down than 6 meters will soon be lost to commercial and governmental interests, who can make compelling arguments that it is in the national interest to remove them from ham radio "service".

The government will also consider transferring 2 meters and 70 cm and sharing use above with hams as the secondary users.

This can be avoided, if we all pull together, it is still not too late.

Ross "codeman" N7VWX gave some practical advice in a separate posting. I'd like to offer a few variations on the theme.

The "best" battery may depend on how you operate. If you expect to be discharging the battery many times (versus keeping it continually charged to full/nearly full capacity), then you need a deep cycle battery. I use a Sears marine deep cycle battery (12 V) in my shack. I thought it provided the most amp-hours for the buck. If you rarely or never do deep discharges, any automotive battery will do fine. Be advised that the deep cycle batteries usually have a weaker sulfuric acid inside (specific gravity about 1.25 vs 1.28), so their resting voltage is somewhat lower than the auto battery's (12.7 vs 13.2 V). There's nothing wrong with this, but it does affect the charger settings you should use for a float charge.

I use a variable-voltage homemade linear power supply (4-A nominal) to keep the battery charged. It has no make or model number, but it also has no RFI. After a significant discharge (either type of battery), it should be charged for a while at 14 to 14.5 V with current limiting to 4 - 6 A. If you don't do deep discharges, you can maintain either battery on float charge (about 13.2 V for the deep cycle, 13.6 for the auto (I think??)).

I use a hydrometer to check the battery. Reading the voltage is fine for day-to-day monitoring, but you need to know the strength of the acid when the battery starts to go bad. I successsfully revived my last battery when the voltage readings said it was in steady decline, but the hydrometer said it just needed a high-voltage charge.

I can't remember the Web pages, but there are some good ones around on batteries and charging. I recommend that you try a quick search.

I apologise to anyone who may have been unhappy about my Esperanto post. However, the idea that a made-for-TV language (Klingon) will ever outstrip a language with over 110 years of usage by upwards of 2 000 000 (that's 2 million) folks in over 120 countries is simply, patently absurd. Esperanto may be virtually unknown in third world countries (such as the US, in this case) but I can assure you people in all walks of life use it continually - even HAM radio operators!

I have the following radio radio gear for sale. All are in very good cosmetic condition and are in perfect working condition (as far as I can tell). Buyer pays the shipping. Let me know if interested.

Cobra 23 Plus Mobile CB-
40 AM Channels, LED signal strength meter, LED channel display, 3 NOAA Weather channels, handheld electric microphone, owners manual, TX/RX indicator, mounting bracket, volume, squelch, channel selector, schematics diagram, and built in speaker

Kraco CCB-4007C Mobile CB-
40 AM Channels, instant channel 9, mounting bracket, owners manual, optional PA feature, handheld microphone, volume, squelch, channel selector, schematics diagram, TX/RX indicator, LED channel display, and built in speaker

Cobra HH-35 WX Handheld CB-
40 AM Channels, full 4 Watt power, rubber duckie antenna, 3 NOAA weather channels, built in electric microphone, volume, squelch, channel selector, built in speaker, original box, LED channel display, owners manual, batteries, wall outlet battery charger, hi or low power selector, and cigarette outlet power supply cord

PRO 2026 Scanner-
100 memory channels, delay feature, scan and search, built in speaker, mounting bracket, home stand, priority feature, lock out feature, manual feature, 1 touch weather, marine, fire, air, and police bands, volume, squelch, and original box

COVERS: 900 and 46 MHz cordless phones, NOAA weather, almost all law enforcement, 10, 2, and 6 meter HAM radio, AM aircraft, VHF lo-band, VHF government, government, VHF hi-band, UHF hi band, UHF lo band, stuff in 800 MHz

Cobra Trapshooter 3 Radar Detector-
City feature, mute, built in speaker, owners manual, volume, dim feature, signal strength, cigarette outlet power cord, windshield mounting bracket, detects X, K, and Ka radar

I would like to sell all of the above as one. I�m asking $250 plus shipping for all. Please e-mail if interested. I will trade for a BC9000XLT with Uniden pre amp and a GRE super converter. Thanks for reading!!!

> Argument); (We all know the last transmission out will be by cellular
> telephone);

The last HAM transmission will probably be by code, if nothing but for old times sake. And whichever old-timer wins the right to make that transmission will be proud of that moment for the rest of his life.

But, civilian radio is here to stay. Trucking companies are using meteor scatter to communicate, cell phones are going to digital voice (something that hams could and should have done years ago, here we are using DSP's to convert our signals from analog, to digital, back to analog, back to digital, and finally, back to analog)

> That morse saves spectrum, (Okay but when was the last time that these
> guys had anything to communicate anyway, besides how well they were

It wastes space, because it ties us mentally to antique modes and operating practices.

R&D in Morse code?!!!?

> That code is necessary during tornadoes, hurricanes and other
emergencies.
> (Tell it to Channels 2, 5, 7, 9 and 32 who have their satellite trucks at
> the emergency site).

Necessary for what? In an emergency information must flow rapidly, not in the slowest mode available.

> John, it comes down to the old Greek word: hubris!
>
> Because of Hubris, all of the bands lower down than 6 meters will soon be

> arguments that it is in the national interest to remove them from ham
> radio "service".

Not likely, with current trends it would be hard to give the HF bands away. Instead they will e closed to hams and will sit empty, kind of like most

of them do today (if you doubt that they sit empty then go to tour HF rig right now and see how many conversations are going on. 20, 40 considering the capacity, that's empty)

> The government will also consider transferring 2 meters and 70 cm and
> sharing use above with hams as the secondary users.

A very real threat, one thing that would help here would be to increase the use of simplex. Putting everyone on a half dozen repeaters causes the impression of crowding to the users, while, odd as it seems, making the band appear relatively unused.

I agree with the above. But many would rather see the hobby go down the drain in the fashion you describe, rather than abolish the Morse Code testing requirement, which is the major culprit stunting the hobby's growth.

>>and should be rewarded with a license upgrade. Being able to copy code
at 20
>>wpm shows that the individual has mastered skills and abilities in this
hobby
>>and truly deserves to be an Extra class.

There are a lot of people who demonstrate a lot more dedication and
achievement than copying morse code at a high rate of speed. What about
the people at TAPR, who brought packet radio (digital) to the Ham
community? What about Spread Spectrum that they are working to bring
into the community currently? Enough acievement? Did you know that if
they haven't learned to copy morse code, then they couldn't even use SSB
on HF? What about the folks at AMSAT who continue to fund and launch
satellites bringing that mode of communication into our community since
the EARLY 60's!?!?!?

I think those people with their dedication are far more deserving of
laurels than some person who learns to decipher the dits and dahs at a
high rate of speed? If the means of incentive licensing is to reward
Hams for technical achievement, wouldn't anyone who helped bring the
hobby forward technically (like TAPR, AMSAT, etc.) be more deserving than
someone who learned to circle the right answers on a multiple guess test
(whose questions and answers are PULBIC DOMAIN?!?!!?) and learning to
copy morse code at increasing rates of speed?

Perhaps they should make the "Advanced" and "Extra Class" levels that has
to be earned with a specific positive CONTRIBUTION to Amateur Radio and
scrap the whole high speed code test and written test?

>> All sounds pretty fair to me. The way I see it, the people who are
>>complaining the loudest about the code test just seem to be too lazy to
expend
>>the time and effort it takes to learn the code. It's NOT that

difficult, it
>>just takes a little time...

What is so special about CW? I think someone should demonstrate knowledge about different modulation schemes used on HF -- like describe in words how SSB is generated, etc.

1130. Heil Microphone again! Will it work okay with IC775DSP?

Newsgroup: rec.radio.amateur.misc

>Clay N4AOX

Actually, Clay, please keep up with the times, CW is being abandoned by
ship to shore in favor of digital and voice modes.

Either way, when the regs were made about 90% of the world traffic was in
CW. You HAD to use CW or no one could talk with you! Now it is a mode
of communication that is falling out of use.

In article <SPAM-1510971026240001@yeti.ics.uci.edu> Scott Truesdell,
SPAM@just.say.no writes:
>
>Morse code requirements are a way of culling out people that aren't
"into"
>it. If someone feels better by calling that an "elitist" practice, I can
>only guess that that person either hasn't the desire or hasn't the
ability
>to put out the small effort to join the "elite", and thus the amateur
>community is probably better off without that person.

Actually, when the original 5wpm competancy was required by the ITU is
was because just about all modes of communication were CW. It has since
evolved into a "gatekeeper" function which has little to do with the
actual radio practice. A test on how one generated SSB or a simlated
interchange displaying the proper technique would be more helpful in
typical operation.

CW doesn't have to be your only "practical" demonstration of technical
merits.

Your attitude of unwavering conservatism is what will eventually kill
amateur radio. There is world-wide spectrum shortage that a lot of
companies would LOVE to get a few slices of under utilized HF spectrum!
They have more $$$ than we do and our only defense is that the bands we
have are being used.

I take issue with your statement that " ... the amateur community is
probably better off without that person. " describing someone who doesn't
want to take CW tests for HF access. The kinds of activities that are
the future of amateur radio are being done with people who probably have
no CW certification, like:

1. TAPR, which is bringing SPREAD SPECTRUM to the Amateur community (and
brought Packet)
2. AMSAT, which since the 1960's has put up comminucations satellites on
a SHOESTRING!

>I can't help but think that the people who want to "open up" Ham bands
for
>use by non-technical folks have some sort of ulterior motive. Like they
>are trying to mold the service into something else. Like a "free"

>alternative to commercial radiotelephony services. Or their personaly
>2-way communication service.

No, I think due to the restrictions and lack of privacy I doubt that is their motive. I just think that most people who want access to non CW modes on the HF bands think it is silly to have to not only learn CW, but to have to learn it at greater rates of speed to have greater voice priviledges!

And, since when has CW been a display of TECHNICAL competance? How many CW operators could design and build the rigs they are using? Really!

Since I am not too keen on lengthy discussions of someone's kidney surgeries and arthritis (having been a SWL for years!) I will stick the the more exciting VHF, UHF and Microwave bands. For international communications I will either use satellites or the internet!

There is a particular set of buttons you can hold during power on that
puts the unit into memory-only mode. See your manual. Perhaps this
can't be programmed via software, and that's why the item is grayed out.

SB DX @ WW $OPDX.327
Ohio/Penn DX Bulletin No. 327

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 327
BID: $OPDX.327
October 20, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, K2KW, N4GN, W5ZPA, KG6AR, W8KKF, W0YR, AP2TJ, CX5BW, CX7BY, DL6DH, G3SXW, G4BUE & DX News Sheet, LZ1BB, IT9JPK, JI3ERV, OH2BH, OM2SA, RA3AUU, XE1AE, ZL2AL and ZP5AZL for the following DX information.

3A, MONACO (Update, please refer to OPDX.326). Mike, W0YR, reports that he and Tom, N9NC, will NOT (repeat NOT) be using the prefix 3A7G for their planned operation from Monaco, October 23-27th. This is due to a mistake by a person who proved to be an inept translator of French, and told Mike that they COULD use the special prefix. 3A7G is only authorized for use by permanent Monaco stations. Mike and Tom will use the more normal callsigns, 3A/W0YR and 3A/N9NC. QSL info reportedly is via OM2SA, bureau or direct. The correct address is:
George Sipos, 93013 Trhova-Hradska 550, Republic of Slovakia, Europe.

6Y, JAMAICA. "You never heard Jamaica so loud, MON!", states Kenny, K2KW, team leader of a multinational team ready to operate 6Y4A as a Multi/Multi effort in the 1997 CQ WW CW Contest. The 6Y4A contest team consists of the following: AG9A, JE3MAS, JI3ERV, K2KW, KE7X, N6BT, N6TV, W4SO and W9QA. The team will return to the site used in 1997 ARRL DX CW 6Y4A operation which is located on the north shore of Jamaica. Two adjacent villas will house the team with all the operations done from the main villa. There is a clear shot over the water to Europe, Africa, USA, Japan, and Oceania. The antennas are designed and provided by Force 12 (Thanks Tom!). The 6Y4A team has done extensive empirical testing this summer to determine the correct antennas for this location. The results of the testing were quite intriguing, and hopefully the results will be published in the near future. The team will use quasi-fixed arrays of multi-element parasitic verticals on 80-10m, with most low band antennas using the new ZR vertical by Force 12. All the arrays will be fed with coax subsidized by Nemal Electronics. Six full stations running 500-1500w are being

brought down with the team (there is no existing station at this QTH!), and, hopefully, DX packet spotting will be available via the InterNet using DX Telnet software. The team will operate outside the contest from November 21st through December 2nd, signing homecall/6Y5. QSL 6Y4A via WA4WTG. For QSOs outside the contest, QSL via operators home CBA.

AP, PAKISTAN (Pirates using AP prefix on CW). Tariq, AP2TJ, reports that as of late a lot of pirates have been using the AP prefix to operate CW on the ham bands. One example is AP2ZP who was heard last week on 21007 kHz. The only bona fide CW operators in Pakistan today are:

AP2HA (Hasnat - active mostly on weekends)
AP2MY (Yunus - presently QRT)
AP2SD (Shahid - presently QRT)
AP2NK (Nasir - occasionally active)
AP2TJ (Tariq - occasionally active)

Tariq suggests, "When working an AP station on CW, operators are requested to ask for the station's name and QSL info. If given a foreign name and a 'QSL Manager' from the same country as the name, you can be 100% sure the station is a pirate as foreigners are not given tickets."

CP, BOLIVIA. Olli, OH0XX, will be active as CP6AA and plans to be a Single-Op/All Band entry in the CQWW CW Contest. QSL voa OH0XX.

CW1, FLORES ISLAND (URUGUAY). Operators Estela/CX3ACS, Daniel/CX2DP, Daniel/CX1AK, Diver/CX6IM Diver, Diego/CX5BBR Diego and Pablo/CX7ACH will be active from this Uruguayan island (IOTA SA-030) between October 24-30th. They will use the special callsign CW1D, and the group is planning to be active in the CQWW DX SSB Contest. QSL via CX1AK: Daniel Muinos, P.O.Box 5, 11.000 - Montevideo, Uruguay.

CW5, ISLA DE LOBOS (URUGUAY). Pedro, CX5BW, reports to OPDX that from now until October 26th, look for this Uruguayan island (IOTA SA-039) to be aired using the callsign CW5R. Last summer this island was damaged by a spread of petroleum, and as it is a natural refuge of wild sea life, thousands of sea wolves and birds were dead. The group going there will be an eyewitness to the recuperation of the island, and will celebrate it by doing a DXpedition and by participating in the CQWW Contest. They will operate all HF, VHF, UHF bands, on SSB and CW modes. They will run high power, and beams on all bands except on 80 and 160 meters were they will use slopers hanging from the lighthouse 200 feet high. QSL via P.O.Box 2, ZC 11000, Montevideo, Uruguay, S.A.

EA8, CANARY ISLANDS (The following press release was provide by Tim, N4GN): " Martti J. Laine, OH2BH, has been absent from the single op contesting arena during his tour of duty in the Far East for the past 4-years. During that period, he also reached the age of 50--an accomplishment which was celebrated with a team effort in the 1996 CQWW CW Contest as C21BH.
But before he retires from the single op game, Martti has once again set his sights on the Canary Islands, and will employ some interesting

new technology in the upcoming CQWW SSB Contest. The newly re-born EA8BH station will be based on PC-controlled Kachina 505DSP transceivers and a customized power splitting, selected receiving arrangement that can effectively cover four beam directions simultaneously if desired. The Kachina concept is described on the following webpage:
http://www.kachina-az.com
The overall station design will be described in a special dual-frame QSL card which will be issued to each and every EA8BH CQWW QSO. Martti and the entire EA8 gang, as well as the people at Kachina Communications Inc. (via N6YY), will be delighted to hear your comments about the sound and penetration of the EA8BH station during the CQWW SSB Contest. EA8BH will be on all bands and welcomes your QSOs and observations.

II9, ITALY. Gianni, IT9PKO, will be active for the CQ WW DX SSB Contest as II9ZZ. He will be on all bands. QSL to IT9PKO, direct or via the bureau.

J3, GRENADA. From October 23-28th, a group will be here active in and outside the CQWW SSB Contest. J3A will be on the air as a Multi-Multi entry in the contest. Members of the group (along with their own J3 callsigns) are: W8KKF/J37K, KC5DJI/J38YL, N0AT/J38AT, KC5AK/J38DD, NH7C/J38NA, N7UE/J38EA, W6SR/J38SR, K6RO/J38RO, N6LL/J38LL and WA8LOW/J38L. QSL manager for J3A is WA8LOW. QSL all others to home call unless otherwise announced. The group is planning a major effort with six complete stations including 4 high power amplifiers and will have antenna improvements. They will operate from the National Emergency Relief Organization emergency operating center. This year and over the past two years, the J3A groups (SSB) and J39A groups (CW) have provided towers, coax, special non amateur equipment, an amplifier and tuner for the NERO EOC. The SSB group expects to have operations outside of the contest starting October 23rd (Thursday) and on Monday and part of Tuesday after the contest. CW and RTTY should be available before and after contest. They state that 10, 15 and 20 meters will have a second antenna available, so several modes may be on at the same time. A beam for 12/17 meters and one for 6 meters are available. The J3EOC beacon on 6 meters is at the contest site.

LZ0, SOUTH SHETLAND ISLANDS. Dan, LZ2UU, will be the radioman for a scientific team that will visit the Bulgarian Antarctic base "St. Kliment Ohridski" on Livingston Island in the South Shetland group. The team will leave November 24th and is planning to be on the island around December 7th. They will be there for the summer season. Dan will be using the callsign LZ0A which is issued for the base on Livingston Island. Although Dan will be very busy with the scientific team, he will make every effort to be active on the amateurs bands. He plans this year's operation to include RTTY and Packet Radio.

NH2, GUAM. Operators Aki/JI3ERV/NH2C, Kaz/JG3RPL/N1BJ, Seo/JR3RVO/WX8M, Toshi/JR7OMD/WI3O, Kazu/JK3GAD/AL7NC and Kou/JH7QXJ will be active in the upcoming 1997 CQ World Wide DX Contest (phone) next weekend. The operators are the members of Guam Contest Club, and plan to air NH2C

as a Multi-Single entry. They report their sunrise/sunset is 2020/0757z. They also mention to look for them between 7075-7100 kHz on 40 meters. QSL via JI3ERV. Any questions or comments are welcomed via E-mail: guam-contest-club@seo.amagasaki.hyogo.jp

QSL INFO AND NEWS.....
Several have asked for DL5WM's (QSL Manager for 9X0A) address: Gottfried Gerth, Obere Dorfstr 13 a, D-09661, Gruenlichtenberg, Germany.

Henning, DL6DH, reports to OPDX that in the last few weeks he has received QSL cards for YT1AD, mainly from stateside stations. Henning states he is NOT the QSL Manager of YT1AD. QSLs should be sent directly to YT1AD's callbook address. Henning has forwarded the QSL requests that were sent to him, but now reports he can no longer send the envelopes to YT1AD without any fees.

The correct QSL route for the upcoming FO8DX operation during the CQWW Contest is via Chris Williams, KG6AR, 1117 So. Del Mar Ave., San Gabriel, CA. 91776-3034

QSL route for XE1RAT/XE3 can be sent to: Radio Club Mexicano, A.C., P.O.Box # 19-500/510, Mexico, D.F., Mexico 03910

SPECIAL EVENT. Look for VY7V to be active October 20th through November 2nd. The Ucluelet ARC will activate this special event station to celebrate the 50th anniversary of Unit #293 Army, Navy and Air Force Veterans. QSL via VE7DUG.

V3, BELIZE. Stan/W5JYK (V31YK), John/K5KR (V31KR) and Mike/W5ZPA (V31MP) will be active from Ambergirs Caye (IOTA NA-73) from November 7-10th. They will operate the usual Dx windows on CW, SSB, and RTTY on 80-10 meters. They will try to be active on 160, but that depends on antenna space. QSLs go to each operator's home call with SASE requested.

VK0, MACQUARIE ISLAND (Update and Change). Alan, VK4AAR, reports that since the last notice he was asked to send to the DX bulletins, it has been decided by those concerned that the callsign "VI0ANARE" will not be used on Macquarie Island to celebrate ANARE's 50th anniversary after all. They will be using a similar callsign, and making their own arrangements for QSLing. Please be advised that Alan is the QSL Manager for VI0ANARE (ONLY) and NOT the call they will be using during that period October 25-31st. Meanwhile, Tom, VK0TS, will be using the callsign "VK0ANARE" during October 25-31st. That's right, he will be using VK0 and not VI0 as a callsign for the whole period, including during the CQWW SSB Contest in which Tom will be competing. The QSL route is the same for VK0TS: Simon Trotter, VK1AUS, PO Box 2063, Kambah Village, ACT 2902, Australia.

VP9, BERMUDA. Look for Jeff, AJ2U, to operate as a Single-Op/All Band entry in the CQWW SSB as VP9ID. There will be some CW activity on the WARC bands outside the contest. Jeff will sign AJ2U/VP9 outside the contest. QSL via K1EFI.

ZM7A/ZL7AA, CHATHAM ISLAND. Just a quick reminder that Chatham Island will be activated next week from October 22-27th. A multi-team from New Zealand will be active on all bands with four stations. During the CQWW SSB Contest, the callsign to be used will be ZM7A. The callsign ZL7AA will be used for the few days before and after the contest. The team will consist of ZL2AL, ZL2HU, ZL2TT, ZL2ST, ZL2RR, ZL2LF and ZL2GI (YL op). Some of the operators were part of the team that activated ZL8RI last year. CW will be not be used during the contest time. Yagis will be used and WARC bands will be activated. Remember, there is no commercial sponsorship for this DXpedition, so costs is being paid by the members of the team. QSL ZL7AA and ZM7A via ZL2AL: Lee Jennings, PO Box 54, HASTINGS 4201, NEW ZEALAND or via ZL2AL CBA or bureau.

ZF, CAYMAN ISLAND. The "DX News Sheet" reports that Don, WB8WCU, will be active in the CQ SSB Contest as ZF2VR. QSL via home call.

ZP0, PARAGUAY. Tom, ZP5AZL, reports to OPDX that his contest station will be active in the CQWW SSB Contest as ZP0R. The ZP0R contest team will be active as a Multi/Single entry and the team consists of: Tom/ZP5AZL, Laca/ZP5CGL, Hugo/ZP5XHM, Luis/ZP5WBM, ZP5VAY and Jorge/ CX6VM. Activity will be on all bands from 160-10 meters. USA stations are to look for them on 160 meters starting around 0500z. QSL via ZP5AZL.

"...bands lower down than 6 meters..." implies VHF and UHF, Rikoski!!
If Mark would have said "frequencies lower than 50 MHz", then your
remarks would have been appropriate.

Wavelength and frequency are inversely proportional. Bands lower than
6m would include 5m, 4m, 3m, ..., i.e., frequencies higher than 50 MHz.
One has to wonder if this is what Mark had in mind, though.

I am finally going to be able to put up a rooftop antenna, and the decision is coming down to the Forbes Group' Ventenna (dual-band version) or Cushcraft dual-band vertical.

What are people's preferences, experiences with either? I'd prefer the Ventenna if possible.

How is the performance, quality, etc?

Thanks much.

Hello,

I recently bought a RCI-6030 Marine Radio, and I am wondering what kind of range does marine radio have on high power (25 watts)? I live near Philadelphia, PA, and there is just about nothing on the marine channels, and I am wondering if it is legal to use it like a mobile/base two way radio? I was reading something that said that the FCC has recently unlicensed the domestic use of marine radios, does that apply to this? Also, is there any possible way of doing a "mod" for the radio to put it on another band like 2 meters, or some other range? (Don't worry, I'm licensed, my call is N3ZVM) :-) Please e-mail me with your responses. I really apriciate it. Thanks.

73's,
N3ZVM

Hello, I am building a 13.8 volt power supply at 30 amps. I am looking
for a heavy transformer that puts out around 18volts. If you have
anything laying around please email me.
Thanks, Mike N0XD

I think the confusion may arise from the fact that Uncle Wayne's
magazine is now called "73 Amateur Radio Today."

I, and, I suspect, many other Merkin hams have never heard of "Ham
Radio Today."

I love the Internet. Where else would you get this kind of info?

You just send it keystroke codes. Can't do everything, but most
functions
can be programmed. Some of the toggle functions are a pain, cause
you can't recover from errors.
Details are in the user manual.

jsjones@rbnet.com (Steve Jones) wrote:

>Jim I think the point being made which you are to stupid to see is
>that if you guys were conducting yourself properly on the airwaves the

No, Steve, not "us guys". The people referred to in the original complaint
are a few people in the United States, whom, luckily, due to the way
the sun rises and sets, we can never hear over here on 75 meters. 'Us guys'
are having lunch while 'the problem' is happening.

>spinning of the dial wouldn't be needed. You are the cancer that is
>hurting our fine survice and hobby. Why don't you get s cell phone and

That's a prime example of what's wrong with your 'survice and hobby'.
Too many people who can't spell it, more less do it. Why, Steve, do you
think that people become perfect when they become hams ? Spinning of
the dial is needed because hams are a cross section of society, and
society isn't anything to write home about any more, especially in the
place where you live.

> But with all the modern advances we have made in weapons and
> medicine there is none to combat what you have which is
> called ignorance.

And with all the modern advances you have made in weapons and medicine,
you still haven't figured out how to combat hunger, which is why I have to
send a check to Feed The Children every now and then to help feed starving
American children.

There are thousands of hams all over the world that use and enjoy ham radio
every day. A small group of geeks in the United States doesn't paint the big
picture for the whole world. Mr. McPhail listens to what he choses to listen
to. Nobody can control what Mr. McPhail hears on his radio except Mr.
McPhail.

Ham radio isn't life, Steve. It's just a game that big boys play with expensive
toys. It won't save the world. What Mr. McPhail is complaining about is
YOUR problem, they're your home boys, if you want the problem fixed, you
go fix it, don't pass it off to the rest of the world.

73, Jim KH2D

"We are a powerful force in the world"?

Run a perspective check dude - HAMS are looked on, if known at all, by the majority of US citizens as old duffers sitting in a back yard shack, smoking stogies and playing with quaint toys and smelling bad. That sure dosen't sound like a 'powerful force' to me! Try this - go down to your local Shopping mall on a Saturday afternoon - do a survey, see how many people know:

What is Amature Radio?
What is a Ham Operator?
What does 'dit, dit, dit, dah, dah, dah, dit, dit, dit' mean?
What is a 'skip propogation'?
What is a '2 meter radio'?
What is TCP/IP?
What is your email address?
What is your computer's CPU?
What is your ISP?

Now for the 1st four - I'd be surprised if you get many correct replies at all. For the 2nd - I'd bet you'd get a much larger correct sampling!

Right now - you'd get more reisitance to totally banning firearms in private ownership than you'd get by taking EVERY Amature Operator in America off the air.

As has been pointed out - the Ham operators need to get their act together and become a force, rather than a quaint shadow of home brewed research and developoment in the post war era. There is SO much that the Amature service could be doing - just look at all the teenage and college age PC geeks running amok on the net. If radio had half the fascination it used to have - many if not most of these young minds would relish the idea of grappling propogation theory instead of trying to 'phish' passwords. Start by dropping the code *requirement* - increase some of the theory requirements, bring electronics and radio back into the public schools. note: those are just ideas - not "cure alls" - except maybe dropping the morse *requirement*.

Ham is becoming what the Boy Scouts have become - A nice idea that's loosing touch with the current times.

Well, sir,
I for one have not seen this piece of legislation, but, unless it directly affects Amateur Radio then good luck trying to get the Amateur Radio "community" to listen to you and help out the people that want to continue to be able to listen to other services. The amateur "community" has nothing else but it's own interests at heart, this includes if it reduces other people's ability to hear EMERGRENCY communications which may directly affect the life (lives) or property of those who would be (illegally) listening to police, fire, paramedics, cellular, etc. If these people would get off their duffs and let their congressman (woman) know how they felt there would be no threat at all to either the rights of hams or others to listen to whatever they want to, whenever they like. By the way, the way around the "scanner ban" is to buy your equipment from dealers in Canada!!!!!

You can always try it and find out.
I would however consider using 2 antennas, so you can switch between
the two and compare.
But, I would think not, as if it were true we would be using them that
way.
Just my thoughts.

97.36% of all statistics are made up on the spot.

That "27%" figure is meaningless, even if it were relevant to the
issue of mandatory code testing, which, of course, it is not.

I assume this is addressed to me, since I asked some questions to
which these seem to be the answers.

>My call is KB0zkz. I'm a general class license. It took me many years

So if you learned 30 WPM, why did you stop at General? You can
memorize Morse, but not words?

>to learn how to play music. It took me a couple months to type. It
>took me a couple of hours to learn code. If you guys ever got out of
>your shacks, you would see that what I did is nothing special.

Nonsense. I don't believe that you did it, and even if you did, it's
NOT something that most potential hams could do. There are too many
inconsistent statements in your posts for you to be taken seriously.

>I would have e-mailed my call, but obviously you don't give your real
>e-mail address. I'm on the computer database. I'm not in the call-book
>as I have not been a ham a year yet. Oh wow, and I know code that fast.

My e-mail address is in every post I make. The fact that you couldn't
find it, and the fact that you evidently can't use a newsreader
properly indicates to me that any special ability you may have to
learn CW quickly is probably offset by "special" disabilities in other
areas.

>Like I said I don't care whether you guys belive me or not, but it's not
>some magical skill. I've seen it done.

Cites? Testimony? Find ONE other credible, witnessed instance of
someone learning CW at 30 WPM in two hours, and I'll admit I was
wrong.

> sitting on, just like most of your other Examples

I has been stated before (repeatedly) that that number came from
the ARRL's own survey ... only 27% said they used Morse "regularly"
the remainder (except for 1% who didn't answer the question) was
split pretty evenly between "never" and "rarely" ... so, you see,
even amongst ARRL "members" (who are probably "bigger on Morse" than
the nearly 75% of hams who are NOT ARRL "members") Morse is NOT
a majority mode by any stretch of the imagination ...

Translation: Jon's post supported your pre-existing biases, so you agreed with it.

I happened to find both posts informative and well written. In addition to technical posts by those who understand the principles, we also need "real world" tests of real equipment before we jump to any conclusions.

I do know this much: My SS 900 MHz cordless phones work extremely well, and have a range far in excess of what could be expected from such low power and small antennas. I've never had any problems with interference to or from them in about 3 years of use.

CW is just a means used to exclude others. Its really nothing more
than that. The feds do not want a lot of people involved in HAM
operations, so they keep them out by using high CW rates.
Wake up and smell the coffee. It would make much more sense to test
for ones ability to use computers and design antennas, transmiters, etc.
rather than test for some ancient mode rarely used by anyone!

FCC: Friendly Cookie Company.

Closed Circuit Advisory

The following is a closed circuit advisory. According to our support fund administrator Andy Jarema, Newsline is once again in need of funds to continue operation. As most of you know, the majority of donations go directly toward paying our monthly phone bills and electronic mail services. This is how we get the news, and it is how we deliver it to you. If we loose the telephone, the E-Mail or both, we will have no way to get the news and no way to disseminate it to you.

Simply said, we need the assistance of every listener who appreciates Newsline to help to keep it on the air. The Newsline Support Fund is separate from the service itself and exists for the purpose of channeling donations directly to the those providing services to the Newsline organization.

The address is the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P. O. Box 660937
Arcadia, California
91066

That ends this weeks closed circuit advisory with Newsline Report number 1053, for release on Friday, October 17, 1997 to follow.

(*****

The following is a QST

More on the ARRL's desire to close the loopholes in CW testing of handicapped applicants and the mayor of the Big Apple lauds the volunteerism of local hams. These stories and more on Newsline report number 1053 coming your way right now.

(*****

More on tightening the CW waiver rules

The CW waiver system that has been in effect for seven years is not working. So says the ARRL. As we reported last week, the League filed a rules change request with the FCC to make it harder for those not qualified to obtain one. The League says that experience has shown that many applicants without severe handicaps have abused the process by obtaining a physicians' certificate. This, even when a person's disability was an unrelated issue.

ARRL Vice President Steve Mendelsohn W2ML, recently told Hap Holly, KC9RP of RAIN about one extreme experience that graphically illustrates the problem.

"I know of no individual who came in limping and had bad knees and felt that he just absolutely could not take a CW test; which lead me to wonder if he was planning on using his foot." Mendelsohn

The League says that at present, 8% of those applying through the ARRL-VEC have requested a medical exemption from the higher speed code requirement. It adds that other VEC's report similar experiences. The League cites a growing suspicion among hams of anyone who has upgraded by waiver. It says that this is unfair to those who require and deserve the exemption because they cannot be tested by the usual procedures.

The FCC rules require volunteer examiners to exercise broad latitude in administering CW exams to accommodate handicapped applicants. Measures include using a flashing light or vibrating surface for hearing-impaired applicants, pausing after sentences, phrases, words or characters, or even substituting a sending test for a receiving test.

Instead, the League observed in its filing, there is a tendency for applicants to seek exemption instead of accommodation. The League says that it believes the procedural changes it has requested will deter those who might abuse the process while still allowing exemptions to deserving applicants. So far, no one has opposed the ARRLs position.

(Via ARRL, RAIN)

(*****

Local control over CB

Hams should not be worried about pending legislation to turn enforcement of the rules governing 11 meter Class D CB radio to local jurisdiction. This,

according to an Internet posting by ARRL Laboratory Supervisor Ed Hare, W1RFI.

In his message, Hare says that the proposed legislation has built-in language that specifically exempts the Amateur Radio Service from the provisions of the bill. Hare says that the ARRL's Washington staff helped Congress write this provision into the bills language.

(Via Internet)

(*****

NYC Mayor recognizes amateur radio

Words of praise for Amateur Radio from the mayor of the nation's biggest city. For the second time in his administration, New York City Mayor Rudolph Giuliani recognized amateur radio. The Mayor issued a proclamation declaring Amateur Radio Awareness Day in the Big Apple. According to Barry Schwartz, N2SHP the ceremony, was held Friday, September 19th to commemorates the mayor's declaration.

(Via N2SHP, TWIAR)

(*****

KB6LQS to fly balloon around the world

The ham who co-piloted a lightweight aircraft around the world nonstop is about to try the same trip by balloon. In 1986, Dick Rutan, KB6LQS, and Jeanna Yager, KB6LQR, flew the airplane Voyager around the world without refueling. Now, almost a decade later Rutan says that he is ready to go around the world again. This time with famed high altitude balloonist Richard Abruzzo.

Abruzzo is the previous holder of the absolute balloon duration record, set in 1992 during a flight from North America to Africa.

He and Rutan will pilot a 170 foot tall balloon called the Global Hilton on an estimated fifteen day mission.

The Global Hilton will be filled with helium in one compartment and hot air in another. The two pilots will live in an 8 foot sphere suspended below. At a Washington press conference on October 15th, Rutan said that the craft will be ready for launch from Albuquerque, New Mexico, on or about January 1st of next year. But its launch could be delayed as late as March 1st depending on weather conditions along the line of flight.

Rutan and Abruzzo are the latest team that have announced plans to try the global, non-stop balloon flight. The others include British billionaire Richard Branson, the Swiss-Belgian team of Bertrand Piccard and Wim Verstraeten, Bob Martin, KC5LHL and the Dymocks Flyer from the Australian Dymocks Booksellers and an attempt by former Chicago commodities broker Steve Fossett.

The Global Hilton venture, which is estimated to cost about one million dollars, is sponsored by Pepsi Cola, Hilton Hotels and Barron Hilton, chairman of Hilton Hotels. At air time it is unknown if KB6LQS will carry a ham radio station on the flight.

Ham Radio & More - QRT - for good

And two ham radio information services to report on. The first is one that's going away.

Sunday, October 26th will mark the final live broadcast of Len Winkler's Ham Radio & More radio program. Winkler, who is KB7LPW, says that the show is going QRT due to a lack of financial sponsorship.

Winkler says that he wants to wish the best to Amateur Radio and he hopes that hams will continue to enjoy the excitement of the hobby. He adds a special thank you to the many people and organizations that have directly impacted the show since it's inception, in April 1991.

Winkler says he will now turn his energies toward a new project he calls Len Winkler Table Tennis & More, Inc. located in Phoenix, Arizona.

New ARRL net based audio service

And there is a new bulletin service for those of you with a computer and a sound card. The League has launched its new ten minute weekly ARRL Audio News. This is a Web-based audio service compiled from the ARRL Letter and will include the week's top news from the world of Amateur Radio and the American Radio Relay League. Senior Assistant Technical Editor Rick Lindquist, N1RL, who writes The ARRL Letter will anchor the ARRL Audio News.

"The basic idea is to have this service be an adjunct to our regular services; the ARRL Letter, QST Happenings and the W1AW bulletins."

This will be an abbreviated service: It's not going to cover everything that is in the ARRL Letter. It will be basically the headline news service of the ARRL Letter, so that folks who may not be aware of the ARRL Letter or maybe not even be aware of the ARRL will have the service available to listen to.

They will be able to listen to it on their computers in RealAudio and bulletin stations and repeater operators are free to use the ARRL Audio News service, to rebroadcast it as long as they give us credit for it." Lindquist

The service updates Friday nights at 9 PM Eastern and is available free of charge. Look for it in RealAudio format at the ARRL Website at:

http://www.arrl.org

Telephone access is expected at a later date.

(Via ARRL)

(*****

Nasty mail-out

A clandestine "mail-out" that appears to libel Glenn Baxter, K1MAN, is being sent unsolicited to hams nationwide. Calling itself the "News Letter," the publication speculates on K1MAN's personal life, business career and his on the air ham radio operations.

Baxter, through his bulletin service is offering a reward for information that leads to, as Baxter says, "the arrest and conviction of this person in Federal Court and successful litigation in civil court."

New NARCC coordination chairman

Phil Hartz, WD0FFX is the new Repeater Coordination Chairman for Northern California. Phil was appointed by the state's Northern Amateur Relay Council - the recognized repeater coordinator for that area. He replaces Steve Stoehr, N6JXJ, who has stepped down but remains a member of the Coordination Committee. John Ronan, K3ZJJ, replaces Hartz as Coordinator.

Tropical Hamboree and Orlando Hamcation

On the convention scene, you can start 1998 off with two shows back to back in Florida.

First comes the Miami Tropical Hamboree the weekend of February 6th, 7th and 8th at the Dade County Youth Exposition Center on South-West 24th Street at Coral Way. Educator Gordon West, WB6NOA, will be flying in from the West coast to present one of his day long Novice and Technician Review classes. It will be followed by a two day General Class code and theory review. Also at the Tropical Hamboree will be ARRL Lab Supervisor Ed Hare, W1RFI, holding an RF Safety Workshop on February 6th. For more information call the Hamboree Hotline at (305) 642-4139.

(Via Tropical Hamboree)

One week later and a four hour drive North, is "the 1998 Orlando HamCation and Computer show". It will be held February 13th, 14th and 15th at the Central Florida fairgrounds in Orlando. Planners tell Newsline that they already have more than 200 commercial tables, 400 swap tables, and 300 tailgaters sign up. Scheduled are several forums on ham radio satellites -- including Phase 3D. Plans are also in the works for a model air and boat

show, testing, and ladies forums. For further information on the 1998 Orlando Hamcation send e-mail to:

AE4NJE@aol.com

DESERT 10-10 NET

Those of you living in the Arizona, Nevada and California desert areas might want to consider tuning into the Desert Ten - Ten Net. It meets every Sunday night at 7:30 pm local time on 28.445 MHZ. You do not have to be a 10 - 10 member to participate and anyone licensed to operate on the net frequency is welcome. Net control stations to listen for are KJ7WK or K7RRR.

(Via press release)

KC5VPF hear from Mir

The Mir ham radio station is back on the air. Alain De Carolis, IW6PBC, reports via the AMSAT BBS that astronaut Dave Wolf, KC5VPF, has been active from the Mir while over Europe. Alain heard Wolf on October 8th at 19:42 UTC operating voice. Wolf called CQ then quickly announced that he had to turn off the amateur radio station since it was the beginning of communications with the Mir Ground Command Control Center. KC5VPF has since been heard by stations here in the USA.

(Via AMSAT BBS)

(*****

No going back tp Phase 1

Don't look for AMSAT to heed the call of some hams. They want the group to build and launch an exact replica of the Mode A specific ham satellites OSCAR 6 and OSCAR 7. Of late, there has been an increasing number of satellite users who have posted their support to the AMSAT North America BBS. But one top official says that the idea of an exact clone of these transponders makes little sense. One reason is the hardware was used on these two birds was of the one of a kind and no longer obtainable.

Dr. Tom Clark, W3IWI, says that early ham radio satellites used left-over components from NASA missions and were five years old when handed off to AMSAT. For example, Clark says that hams would have a very hard time even finding some of the same RF transistors today.

A more sound approach, says Clark, would be to redesign the hardware using contemporary parts. This says Clark would also boost the satellites receiver and transmitter performance significantly, if such a satellite were to be built, which in itself is highly doubtful.

Even if it were constructed, Clark says that there is still the problem of getting the satellite to orbit. He says that the prevailing experience is that the building of the RF hardware constitutes less than 10% of the effort of flying a satellite. A good deal of the remaining 90% is getting it into space.

(Via AMSAT-NA BBS)

(*****

Lewis Satellite lost

An out of control earth observation satellite burned up in the atmosphere. The Lewis spacecraft, which started tumbling days after being launched in August, crashed into the atmosphere at 17,000 mph and burned up over the southern Atlantic Ocean off the coast of Antarctica.

The sixty five million dollar million mission to monitor land use and pollution was meant to be a champion of NASA's "cheaper, faster, better" philosophy. Four days after launch it went out of control and all communications were lost.

Turkish special event

On the international scene, keep your ears open for YM3SV to be active starting at 00:00z on Saturday, October 25th. This to commemorate the "Friendship, Neutrality, Reconciliation and Arbitration Agreement" between Turkish and Greek Republics.

Historically, this agreement was signed by Turkish President Mustafa Kemal Ataturk and Greek Prime Minister, Eleutherios Venizelos on October 30, 1930, in Ankara. This, in accordance with the authorization from the Izmir Directorate.

By the way, this commemorative ham radio event will end at 24:00 UTC on Friday, October 31st. If you work it, QSL to TA3YJ, Box 876, 35214 Izmir, Turkey.

(Via press release)

(*****

DX

In DX, DJ1US, reports he has finally learned he would be able to operate in Uganda. This is significant because he applied for his only ten weeks ago!

The news is not so good for another planned DX operation. It been reported that JA1OEM, had to postpone his September 25th, Gambia operation because he was unable to obtain a visa.

And Daily DX says that His Majesty King Hussein, JY1, made a very rare visit to the bands in the past few weeks His Royal Highness showed up

several times on 14.280 MHZ at 21:00 UTC. QSL's to His Majesty's long-time QSL manager, WA3HUP.

(Via various DX sources)

(*****

What's in a call

And finally, this story of what happened when people with the same name but different calls wind up running an Ohio ham radio club? It is truly a "far out" story that could lead people to wonder who does what. Charlie Kotternan, KA8OQF tries to sort it

At the September 4th meeting of the Far Out Amateur Radio Club elections were held for 1997 and 1998. The new office holders are:

President Bob Rosell, K8WC Vice President Michelle Dilgard, KB8SGN Treasurer Bob Dilgard, KB8CAS Secretary Michelle Hoyle, N8JAN

So let's see here. The Vice President and Treasurer are husband and wife. The President and Treasurer have the same name. The Vice President and Secretary also have the same name. And the Secretary's husband, who holds no office has the same name as the President and Treasurer.

So the Far Out Administration now consists of Bob, and Michelle, and Michelle's Bob, and the other Bob's Michelle. Or something like that.

Kind of reminds you of that old Abbott and Costello gag of "Who's on First?"

The following is a QST

The ARRL says NO to a recall election against a New York Section Manager and a West Virginia Sheriff confiscates the radios of CBers who talk dirty on the air. These stories and much more on Newsline report number 1051 coming your way right now!

(*****

ARRL denies NYC-LI SM recall election

The ARRL has said no to a recall election of the newly elected New York City Long Island Section Manager. The reason given is that the petition calling for the election does not have the minimum required minimum number of valid signatures.

A petition seeking the recall of New York City Long Island Section Manager Len Buonaiuto, KE2LE has been rejected by the ARRL. The recall effort which has been ongoing for several months sought to remove Buonaiuto partly on the basis of the section level appointments he has made since taking office in January and the ouster of long standing appointees from those positions.

The petitioners proported that the section managers actions were detrimental to the administration of league programs and not in the ARRL's best interest.

The recall petition was delivered to Newtington September 19th by Joseph Tomasone Jr., AB2M of Dear Park, NY. The signatures of 97 league members were required to trigger a recall vote. But apparently this requirement was not met. 98 signatures were submitted including 3 by fax, which may or may not have been acceptable.

However, the ARRL determined that 7 of the signers were not league members.

In a September 23rd letter to Tomasone, ARRL Secretary David Sumner, K1ZZ said the petition contains an insufficient number of valid signatures to server as the basis for a recall election.

At air time there has been no word from the Big Apple as to whether another recall petition is being prepared.

West Virginia confiscates $75,000 in CB equipment

CBers passing through Fairmont West Virginia are learning the hard way to keep dirty words off the air. This, as the Fairmont sheriff's department has already seized $75,000 worth of citizens band radios from foul-mouthed operators.

Authorities call it an effort to end the use of profanity on the 11 meter Class D Citizens Radio band in West Virginia. According to news reports, in one incident a tractor-trailer driver made the mistake of directing some rough language toward Sheriff Ron Watkins. Watkins says that this particular CB'er was overheard making obscene comments while the sheriff was patrolling in his squad car. Apparently the trucker CBer didn't think that Watkins was listening but the sheriff was tuned into his every word. This CBer became one of many who'se radios Sheriff Watkins has confiscated.

Watkins says that profanity and sexually explicit language have been a problem on the airwaves for years. He decided to crack down after receiving a complaint from a local resident. Watkins says the man was a father whose son and his son's friends were studying to obtain a ham radio

operator's licenses and who overheard the dirty language while listening to a shortwave radio.

So far none of the fourteen foul-mouthed CB'ers stopped by Watkins have been arrested, but the Sheriff says that he plans to file charges against several. Meantime the county has quite a pile of eleven meter sets in its evidence lock-up and nobody from the FCC has bothered to tell Sheriff Watkins that he lacks the federal authority needed to confiscate CB radio, or any other radio gear.

FCC closes down religious pirate station

The Federal Communications Commission has shut down another unlicenced FM radio station operating as Community Power Radio in Sacramento, California. This after the broadcasts by Minister Abdul Rahman Muhammed and Mike Colbert had drawn complaints from Sacramento listeners who tuned in to the station.

In what seems to have become a week by week sweep of unlicenced stations, U.S. Attorney Paul Seave says that FCC agents visited the station twice and warned operators before seizing its equipment. Both times, the station went off the air, but returned to broadcasting after a brief time. So the FCC decided that it was time to take Minister Rahman off the air permanently.

They did so in early September with the announcement made public late last week.

(Via FCC release)

ASU-Sat - An FM Repeater in orbit soon

Hams who have been waiting for a ham satellite that operates like a terrestrial repeater will soon have their dream come true. It's called ASU-Sat and its now in what the satellite boys call the integration phase of its construction.

Assi Friedman, 4Z7ABA at Arizona State University talks about the satellite via the AMSAT North America BBS. He says that ASU-Sat will be an open FM repeater in the sky and will operate in a similar manner to AMSAT OSCAR 27. ASU Sat's uplink will be on 2 meters at 145.990 MHZ with a 70 centimeter downlink at 436.700 MHZ.

The big difference between the AO-27 and ASU Sat is that the repeater on the ASU bird will be tone access. It will use a system compatible with the Motorolas trademarked PL (tm Motorola) system. This means ASU-Sat's transmitter will on go on the air only if a user wants to access it by transmitting to it with the proper sub-audible tone. This says Friedman will not only minimize interference but also enable the designers to

improve the satellites power budget. This says Friedman will make the transmitter a bit stronger then AO-27's downlink. ASU-Sats digital communications system will be unique to this particular satellite. Friedman says that it will not have a Pacsat type application on board. Rather, designers are considering several new experiments such as an APRS store and dump digital repeater operating at 9600 baud using Frequency Shift Keying. The digital and analog signals will be multiplexed on the satellites single downlink.

When will you be able to play with this miraculous new hamsat? Right now ASU-Sat has no launch date scheduled, but its planners say that there is a good chance that it could be in orbit by the middle of 1998. And while you probably will not be able to access it with a dual-band HT and a rubber duckie, that same HT and a pair of beams may easily give you access to this yet to be launched new bird.

(Via AMSAT-NA BBS)

KC5VPF now on Mir

U.S. astronaut David Wolf, KC5VPF has traded places with Michael Foale, KB5UAC on Russia's Mir space station. The 41 year old medical doctor and engineer officially joined the Mir crew after his custom-shaped seat was installed in the station's Soyuz escape ship.

The space shuttle Atlantis arrived at Mir on Saturday, September 27th to drop off Wolf, deliver food, water and other supplies and pick up KB5UAC. Foale, who has been aboard Mir since May, will return to earth on the shuttle on October 5.

Wolf's mission went ahead despite criticism from some U.S. lawmakers who say that the decade old Russian space station is no longer safe. NASA said two outside safety reviews endorsed its decision to send Wolf to the Mir.

(Via K6DUE, other news reports)

MIREX lauded in Congressional Record

Ham astronaut Jerry Linenger, KC5HBR, and MIREX have been recognized in the pages of the Congressional Record. The May 23 edition contains the remarks of Michigan Senator Carl Levin marking the occasion of Linenger's return after 5 months aboard the Mir space station.

During his tour of duty aboard Mir, Linenger and his crewmates experienced a fire and problems with the station's oxygen-generating systems, lost of power and coolant system leaks. Also mentioned was Linenger's use of ham radio to speak to a fifth grade class in Charlevoix, Michigan.

Levin recognized Linenger, an Eastpoint, Michigan, native, for courage, perseverance and professionalism in the face of adversity. Levin also

congratulated Linenger on a mission heroically accomplished.

N4XKG plugs ham radio on The Today Show

Persistence has paid off for Jackie Forbes, N4XKG, of Punta Gorda, Florida, who wanted to top off her visit to New York City.

This, by getting a chance to plug ham radio, the ARRL, and her 70th birthday on NBC Television's The Today Show.

And according to Larry Brown, KD4KVE she succeeded. Brown, says that Forbes wrote to the show's director and even pulled a trump card, sending along a photo of herself and Bill Miller, who worked on Today in the early days, when Dave Garroway was the host.

Still not knowing if she'd be granted a few fleeting seconds of fame on national TV, Forbes arrived outside NBC on the morning of her birthday, August 4. Only then did she learn that Today personality Al Roker would give her a live shot at 7:35 AM. During the interview Forbes greeted ham radio operators. She told a Punta Gorda newspaper that she wanted to be on The Today Show to draw attention to the ARRL's efforts to protect ham radio frequencies from incursions by commercial interests.

Ohio Public Service

On the pubic service front, On September 6th Seneca County Ohio hams provided assistance to one of the largest High School Cross Country events in the country. It took place in Tiffin, Ohio and Jeff Potteiger, WB8REI says that 160 schools with thousands of participants involved.

Hams blanketed the area and were able to communicate back to the medical tent with location and type of injury of the runner. Medical people were then dispatched via specially equipped gulf carts to aid the victims.

This is the fifth year that Seneca County hams have provided communications for this event.

(Via WB8REI, Newsline)

(*****

Disaster Awareness Day

This note to hams involved in public service communications. On Wednesday October 8th, national and international agencies involved in disaster preparedness are conducting a grassroots effort to educate the public on ways to reduce the impact of natural disasters. Among the agencies taking part is the National Weather Service and the ham radio operators who volunteer their services to it. According to Steve Sipple, KB7QHP, the purpose of this annual event is to raise global awareness that the best time to take action is before a disaster strikes and not wait for it to happen.

(Via WB7QHP)

(*****

AOL vs The Trojan Horse

Hams who use the nations largest service provider are getting added protection from hackers. America Online has announced that it is reinforcing its shield against computer hackers with the introduction of "Download Sentry." This is an automatic warning about the potential danger of some e-mail file attachments.

The system is designed to counter "Trojan Horse" computer programs. These are programs that capture passwords and then e-mail them to hackers. This gives hackers access to private accounts or stored files.

In operation, the Download Sentry will pop up when a subscriber attempts to download an e-mail with one of the types of file attachments associated with Trojan Horse programs. A subscriber can then decide if he wants to continue or let the download pass by.

(Via AoL Press Release)

Munich ATM clone

Newslines Mitch Wolfson, DJ0QN reports from Munich Germany on a cyberthief with a strange sense of humor. It seems that he built a clone of an Automatic Teller Machine and placed it on one of the main walkways in Munich. Unsuspecting people would put their card in and type in their PIN number. The phony ATM would then display an "out of service" notice. Users would go to find another machine and forget about it.

Once a day, the owner of the phony ATM would come by with his laptop computer tied to a radio modem and download all the data so that he could clone the cards along with their PIN numbers.

He was caught when someone noticed that the ATM wasn't firmly mounted into a building and notified the police. Detectives staked out the locality and waited until the guy showed up. The caught him read handed writing the information to his hard disk and placed him under arrest. A close inspection of the phony ATM machine showed that it was designed to self destruct if it was taken apart or had its power removed.

The phony ATM was in place from Thursday night September 4th until Sunday the 7th. Authorities still have no idea how many people got stung by the phony machine.

UP a tree

A Michigan disc jockey recently found himself on the air and up a tree and without a helping hand. This, after he tried to rescue a trapped cat.

News reports say that the disk jockey was broadcasting live at a listeners home when a neighbor asked him to help retrieve a cat stuck in a tree. He went live to give listeners a chance to hear the big rescue.

But something went wrong. As the disk jockey climbed up the tree, down went the cat, straight to its owner. She said thanks and left.

But then the disk jockey found himself stuck in the tree with no way down. The fire department was called but declined to help. They thought it was some sort of a prank or publicity stunt. Finally, after being stuck up the tree for over an hour a passing motorist on his way to a job site for a roofing company stopped, pulled out a ladder, and ended the DJ's ordeal.

John,

Excellent radio!

Yes, you can use the Heil HC4 with that radio (I do), but......

....like all Icoms, the 775 expects an electret mic so there is
a DC bias voltage on the mic line. You must put a blocking capacitor
in the mike line to avoid saturating the HC4. (I use a .01 uf ceramic.)

The fourth-power assumption is probably reasonable for a transmitter with a relatively low antenna, in an urban environment. If the SS transmitter were located at a good VHF location, atop a decent hill, for many circumstances, a square-law approximation would be reasonably accurate.

Offering both approximations did give us a pretty good idea for the possible range of effects.

I was successfully resisting getting into this mess until the above appeared. Good Heavens, man, ham radio is a *hobby*. If you are not interested, get a cell phone. No tests and few restrictions. If two meters continues to regress toward CB with the "new" hams (yes the truck drivers have found it now) operating there, I'll be leaving it, too.

ANNOUNCING ALMOST ALL DIGITAL ELECTRONICS
ENCYCLOPEDIA OF AMATEUR RADIO EQUIPMENT

The encyclopedia currently contains 400
entries (100% pictures) spanning over
20 manufacturers, and 70 years.

A comprehensive index allows you to find
equipment by manufacturer and model or
you can take the 'grand tour' which takes
you page by page through the whole thing.

You can use the encyclopedia to generate a
hyperlink to a specific piece of equipment
which you can paste into usenet FOR SALE or
WTB postings. Interested parties can click
on the link to view a picture and technical
description.

The encyclopedia is currently an infant with
some poor or missing technical descriptions
but will improve with age. I have sufficient
data to add about 100 new items per month for
the next 5 or 6 months, as time permits.

The index consists of hundreds of page to page
links that I have not fully checked out on line
so if you find any bad ones, I'd appreciate an
e-mail of which don't seem to work.

CHECK IT OUT AT:

As they say, there is nothing new under the sun. As has been documented
100s if not 1000s of time in the historical record, hams have always
been trouble-makers on the air. The literature I have access to shows
we've been pests since the creation of wireless; we horribly interfered
with ships and shore stations while they attempted to pass traffic,
we sent phoney departure and arrive orders to US Navy ships. It wasn't
until 1912 that the government finally put its foot down and banished
us to below 200 meters (which was thought to be a waste land at that
time).

We even interfered with message traffic concerning the survivers of
the Titanic sinking; what follows is from the book "Famous Sea Rescues":

"With the first news of the sinking of the Titanic, every amateur
in America camped on his key and added to the bedlam...

"Thousands of messages piled up at the shore stations. At the solicitation
of the American Marconi Company, the government ordered all radio stations
north of Hatteras closed down, leaving only those at South Wellfleet,
Siasconsett, Sagaponack, and Seagate open; they were to handle Carpathia
traffic exclusively. The order was enforceable only on commercial
stations; the amateurs blithely continued "on the air." The situation
became so desperate that Newport Radio, a naval station, "requested every
station in range to keep out" until a list of the survivors could be
obtained. Department of Justice men went to work tracing the origin of
false and misleading messages."

More examples to follow.

Hi Dave.

One thing you might try is to move the coupler from the Load shaft to
the Bandswitch shaft. I did that in my '830 and it is the weak point
in an otherwise very fine radio. I did order a new coupler from the
east coast parts supplier and they sent me a bakelite couple that
worked fine on the load shaft, but looked a little suspect to get
installed on the bandswitch. This should be a temporary solution
until you can get parts.

source of the Original legitimacy when the FCC (or its predecessor?)
was formed in 190whatever; see below.

> In fact, it is one of the more reasonable pretexts for grabbing such
> federal power.

Agreed.

And since the Senate ratified the ITU treaty, the Constitution
recognizes the Federal Government's responsibility to handle foreign
affairs and treaty obligations, so the FCC is necessary under the
ITU treaty. So they no longer /need/ to fall back on the Commerce
clause, although the case law at the Supreme Court is solid there,
whether it was founders intent or not.

Discusions of the difference between the constitution as writ and as
interpretted, or between what we've got for govt and what would be
better, belong in other newsgroups, so I'll cut /myself/ off here.

How about just replacing the coupling. It has cracked and cannot be
tightened. Takes about 10 minutes and cost less than $10 for a new one..

10/20/97

I have a Yaesu FT-2400 2 Meter rig in EXCELLENT CONDITION, complete with
DTMF backlit microphone, original box, manual, mobile bracket, etc.
It is switchable power, 50 Watt/25 Watt /5 Watt and has 31 memories
plus a one-touch instant recall CALL channel. Has large backlighted
LCD display that can be numerical or 4 character alpha display. I just
had a new lithium battery installed for the memory backup. In case
you don't know it, the FT-2400 is full Mil-Spec for shock and vibration.
It is a very rugged unit. I'll sell it for $230.00, which includes
shipping inside lower 48 states. To purchase, leave Email and send
check or money order to me: Darryl Linkow - KE6IHA
4958 Marmol Drive
Woodland Hills, CA 91364

HAM GEAR FOR SALE

Communications Specialists TE-64D PL box - BRAND NEW!
---------- $125.00 including shipping

4 Motorola MT1000 HT's - 5 Watt - 146-174 Mhz. band - 16 channels,
can program the frequencies and PL's that you want - absolute
MINT CONDITION - each comes with antenna, belt clip & battery --
$450.00ea/incl shipping

I have 23 Motorola HT-600 portables available for immediate sale.
These HT's are 5 Watt, 6 channel, 155-174 Mhz. bandsplit. I will have them
programmed to your frequencies and PL's as you specify. I also
have a few speaker/mics, six-bank chargers, some single rapid
chargers, and a few other accessories for these radios. I will sell
these accessories with purchase of radios only! Radios
are all in excellent condition, and come complete with
battery, antenna, and belt clip or drop-in holster. Price is
$325.00 each incl shipping. Please Email me for quantity pricing.

CQ Magazine - August 1995 issue - $2.50 including shipping
CQ Magazine - Sept. 1995 issue - $2.50 including shipping

>
> I don't think we know enough about the contact to know if a more robust
> digital mode would have offered 100% reliability. :-)

The impression that I got from the original post touting the "wonders
of Morse" was that it was "armchair copy." That would imply that the
path was not too bad. That would imply that something "off the shelf"
like Clover or PactorII would have "kicked ass" on that path, thus
permitting the power to be reduced (at least one of those modes would
have done that *automatically* ... I'm not positive about the other).

> At a good enough
> S/N, ANY mode could have 100% reliability . . .

I would argue that Morse will NEVER offer "100% reliability" because
of the "human factor" ... even the best operators make mistakes under the
best of conditions. I would submit that in a contest to copy some very
large number of consecutive characters without error, the machine will
win virtually every time, given the same excellent signal quality.

> I do not agree with the characterization "far less power," though. Some
> of the digital modes, encorporating both SS and FEC, can use a few dB
> less total power under ideal circumstances.

Gary has, I believe, reported long-haul links over paths where Morse could
not be heard at power levels of 10mw MAX ... and good waveforms and FEC can
give (way) more than "a few dB" of gain ...

> In many cases, however, that
> true gain advantage is not always realizable. (As we both know, the gain
> advantage in total power due to FEC and the wider transmitted signal. and
> process gain are NOT the same thing.)

I didn't say word one about "process gain" ... I wasn't even talking about
SS in the reply to Scott's account of his mobile Morse QSO ...

> >Actually, the fact that digital systems can easily have
> >100% copy on signals that can't even be detected by ear
> >exposes the fallacy that the human brain is the best
> >signal processor available ...

>
> This is not, I am sure, intentionally misleading.

No ... I didn't intend to say what you thought I meant ... <grin>

I *meant* to say "Actually, the fact that digital systems can easily have
100% copy on signals at signal levels at which OOK Morse can't even be
detected by ear exposes the fallacy that the human brain is the best
signal processor available ..."

> However, when one
> listens with a narrow-band receiver to a portion of an SS digital signal
> sent in a wide bandwidth, one is listening to only a portion of the
> transmitted signal, not ALL of the power sent. It would not be
> surprising that it is cannot be "detected" by ear.

I wasn't talking about SS signals, I was talking about "regular" digital
modes (like Clover or PactorII, for example).

> If that same signal
> had been sent using the same total power in the minimum necessary
> bandwidth for the data rate employed, it would be quite detectable by ear
> in a receiver of the appropriate necessary bandwidth.

This isn't really true, even though I wasn't talking about SS systems.
Gary and others have reported having solid copy on Clover signals that
could not be detected by ear. This is consistent with what I've seen of
the specs for that mode.

> If I understand
> this all correctly, the actual total power advantage to spreading is as
> much as 1.6 dB, and this is not always realizable in practical systems.

Again, I wasn't talking about SS ... but there is "spreading" and there is
"spreading" ... spreading, as in SS systems isn't generally intended to give
an advantage in required transmitter power, it is used to allow multiple users
to share the same band without interfering with each other, to provide anti-
jam (AJ) properties, to "hide" a signal in the noise (covertness), or to
permit accurate ranging (there are other uses, but those are some of the
more common advantages gained by "spreading in the SS sense.")

Applying "heavy" FEC also results in "spreading" (in a sense) ... more
powerful coding schemes add more redundant bits which ups the bandwidth
and "spreads" the signal ... however, this "spreading" can result in a
HELL of a lot more advantage in required received power ("coding gain")
than 1.6 dB.

Guy,

No, there aren't.

The closest ones are:

HRO (Ham Radio Outlet) in Woodbridge, VA (20 or so miles south of the District, off of I-95, on US-1 South). 800-444-4799

EEB (Electronic Equipment Bank), Vienna, VA . The closest, being just outside the I-495 beltway to the West. Also known as Edco. "Orders": 800-368-3270
http://www.eebradio.com

Maryland Radio Center, Laurel, MD. Northeast of DC from either US-1 North or the Baltimore-Washington Parkway. 301-725-1212
http://www.weathernode.com

If you have a car, you can visit EEB easiset; the other two are about equally hard to get to, although my preference between them is HRO in Woodbridge.

Hope this helps you out.

73,

Mark

the problem that you are probably experencing is an
unlocked pll
circuit. this is caused a failure in vco 5. kenwood
applied a glue to
this vco circuit. this glue contaminates in time
making the vco
unstable. the fix is to remove the glue from the
components and the
circuit board completly. before i fixed both of my
kenwood ts440s
radios, i put a spectrum analizer at the output of this
vco. sure
enough, the frequency slid off the center and dropped out. i
did this
fix 2 years ago. both rigs are working fine.Ron , N2CQT

>with less power, using better methods ...

I could argue the point that you'd find as few hams that could type that
fast (mobile or not) :-) as you would find those that can consistently
QSO in morse at that speed. You reach a point of diminishing returns
pretty quickly comparing morse speed and keyboarding speed. The only
digital modes that can reasonably be expected to exceed that are
digitized voice modes.

The same argument holds true with emergency communications. It doesn't
matter that much that you can pass messages at 200wpm (or whatever)
using digital modes. You still have to 'prepare' the messages and get
them into the transmit stream. If you're talking hardcopy traffic, one
PC/keyboard or whatever, is not going to be able to get the traffic out
that much faster. Unless the operator has 'transcription' experience,
getting the message from original format (paper, whatever) into the
PC/TNC/etc is going slow things down considerably.

If it's Canada, a place to start would be the Radio Amateurs of Canada
(RAC) site at
www.rac.ca

I'm not sure the questions are there (I got grandfathered when the
new license structure came into effect), but there is some exam related
material. It would definitely point you to the questions in some form.

RE: ARRL Survey

>I am not sure that the survey is really realistic myself, THe
>conditions are pretty awfull right now, I am usually quite an active
>operator on HF however, the last two or so years has been really
>bad on HF so my gear is mostly collecting dust. I have done some CW
>but due to cdx I can't remember the last phone contact. Maybe the
>ARRL should wait a couple years and poll the HAMS again. I'll bet the results
will be different.

I think the survey was a real farse. I don't think they were scientific. Nor
were they reflective of the Ham Radio Community. Since 75% of all hams
(perhaps more now) are NOT ARRL MEMBERS, the survey just focused on that
minority that are League members.

Why do you suppose that 75% of all hams are not ARRL members? Is the league
doing a good job meeting the needs of hams?

> Suggestions: (see original message for long list of 'em)

>Well, enough of that ... what do you all think?

David,

Great suggestions! If more hams took them to heart it would certainly help the hobby. I'd like to add another point:

6. Hams should challenge themselves to experience a new aspect of the hobby at least every year.

It amazes me how many hams I know who have a) never tried packet. b) never tried slowscan. c) never tried hf rtty d) haven't made a contact on the "new" WARC bands. e) haven't tried meteor scatter. f) haven't experienced aurora propagation. g) don't really UNDERSTAND propagation h) haven't even made an RS-12 satellite contact -- thats the one with 15 m up and 10m down. i) have never operated HF mobile, g) buy at least a 9600 buad TNC and upgrade your local network from the ancient 1200 baud standard. h) etc etc etc etc.

In order for ham radio to grow, we ourselves have to get excited about ham radio. Its easy to rediscover the excitement of the hobby... just do something! Try it! Save up and buy some new equipment.

Like you, David, I'm an extra class ham. However, I think the CW licensing requirement should be replaced with something more relevant. Instead of spending 50 hours learning CW for a ham test, I think there are other skills that would benefit the hobby more (programming, computer skills, more technical understanding, yatta yatta yatta... its not hard to come up with something).

CW is an enduring mode. I enjoy operating CW on occassion. I use my computer terminal to copy/send code at high speeds. Its really not necessary for me to be able to copy code by ear. This tradition is romatic, but its not practical and it makes ham radio seem irrelevant.

Ham raido is often held up to ridicule because of the code requirement. Everyone else has given it up... the coast guard, the navy, etc.

As ham radio moves into the 21st century, a new millenium, its time to look forward and leave the code requirement behind.

1222. What Can Ham Radio Offer in the Classroom?

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-21 00:00:00 UTC
From: darrenleno@aol.com
Message-ID: <19971021132501.JAA12798@ladder02.news.aol.com>
Source record: 188309

>Inner city kids building better HF antennas? We have to teach them
>to read and write first! Get them away from midnight basketball and
>get them into the school-house!

Ham radio should be a part of school house learning. With the exception of the morse code requirement, ham radio has a lot to offer kids: geography, electronics, practical skills like soldering, satellites and space, weather and atmosphere, intercultural contact, socialization skills, mentoring... can anyone think of others?

What has your club done to bring ham radio into the classroom in your community? Have you contacted your local school board reps? Principals? Electronics teachers?

1223. WTB: Moto GP300/GP350's UHF

Looking for two Motorola GP300's or GP350's in good - excellent condition. Need UHF, minimum of 8 channels.

Need chargers also.

Please e-mail or call 562.690.8106. Please do not post replies to this group.

Thanks,

Jim

Scott,
As a fellow extra class operator, I totally agree with you on these points:

>Get a Technician license and you're a ham, as much as
>am I

>Anyone willing to badmouth Technician licensees isn't
>much of a ham - as it goes completely against the
>amateur spirit.

You're absolutely right. I've been to club meetings and heard far too many conversations where "real" hams are far to quick to put down the Techs, our fastest growing license class.

>As for Morse's irrelevance, if there are people using it
>and it serves as a means of communications, it is not
>irrelevant

I enjoy CW. However, I don't think that, as a requirement, it contributes much to the viability or vitality of the hobby. It shouldn't be a barrier to participation on HF. Heck, I can't copy RTTY or Packet by ear, but I can operate them just fine. Same with CW.

>unlike COMMERCIAL services, we rely on
>
>PEOPLE WHO KNOW HOW TO USE THEIR MACHINES TO COMMUNICATE.
>Rely too heavily on a computer and you shall forget the basics,
>such as "how the computer got there."

Ah, yes. But have you seen a modern transceiver? They're all basically computers connected to a transmitter. Computers >are< a part of the ham shack, and its more important for a ham to know how to use a computer than a CW key.

73 my friend,

Hi, Alan.

Have you considered writing your own program to receive and process the data instead of using Winult? I have watched the data coming out of my Ultimeter 500 in Win95 Hyperterminal, and it's just ASCII strings. As such, it shouldn't be too hard to write a program to read and parse the incoming data any way you want (depending on how familiar you are with the hassles of Windows programming, of course). Also, of course, you could receive the data from the Ultimeter in whatever format best suited your needs, too, and you could set timeouts appropriately.

Per chance, do you have the spec's for the raw data formats coming out of the Ultimeter control unit? Since I also want to use my Ultimeter with a Linux system, the Windows-based software Peet Bros provides is kind of useless in that environment.

You know it's funny, Patrick calls tech pluses idiots, we can't win. Some of us try to upgrade and when we do we STILL get our horns busted. At least we learned the code and got to 5 wpm for Christ's(tm) sake. I'm up to 10wpm and trying to get my general. Just what the hell do we have to do?

I think this is a GREAT idea. Since the anti code group thinks Morse is obsolete and computer based digital based communications systems are not, I think that they should support a test on assembly language or C++ based programming as an alternate or substitute requirement.

Skills in this area would ensure that hams would have the knowledge and ability to effect modern communications technology and advance the state of the art.

Perhaps we could propose this and get them to agree. Nothing would be more appropriate - but I admit most would think learning Morse would be easier.

It's pretty easy to make broad sweeping statements about Morse Code being obsolete and useless but is it true? Even if it is technically, is the declaration true for everyone?

For example, I consider anything below a Pentium 133 to be junk, but most people are quite happy to receive my junk when I give it to them. Same thing with radio in most parts of the world.

I do think we should make a codeless SW license as part of the incentive licensing plan though, and end the fighting. It could be a subset of the General portion of the band. I think the statistics would prove the following pretty quickly -

Problem with growth is not Morse but room for antennas and the restrictive covenents, building codes, and lack of native born kids these days (just ask anyone who owns a business) in general.

I've helped over 20 people get licensed in the last year and not a single one has been active on HF. About 30% have upgraded and learned Morse for fun, having no ability to get on the air. All are active on VHF/UHF.

If we put as much energy into removing the antenna restrictions as we put into this Morse argument we might actually do something positive for the hobby.

/Len

1230. DO YOU CARE?!?! (was:Re: Morse Code Fetish)

Newsgroup: rec.radio.amateur.misc
Date: 1997-10-21 00:00:00 UTC

Do people in rec.boats.electronics care about the amateur radio morse code arguement? They don;t need to know code to use their equipment.

Do people in rec.video.satellite.tvro give a rat's butt about it? Geez! They are just trying to watch TV. Leave 'em alone!

Why can't you people keep this in the appropriate code arguement newsgroup?

Followup reset to rec.radio.amateur.policy

Does anyone have a sequence list for programming Bendix/King radios from the keypad? I need to know what options are programmable and the proper order for freq. and pl input. Also wondering if the Shinwa ht's are programmable from the keypad and if so, need same info. Either the 'blister keys' on the older ones or the regular keys on the newer. Is it possible on the Shinwas at all?
thanks,
Randy

You don't need a license to play the saxophone, at least in the
United States. But then again, that's a HOBBY.

Check part 97. Ham radio is a service, not a hobby. We TREAT it
as such between times at which it is used as a service, but it is
indeed a licensed SERVICE.

And again, nobody's forcing anyone into doing ANYthing.
